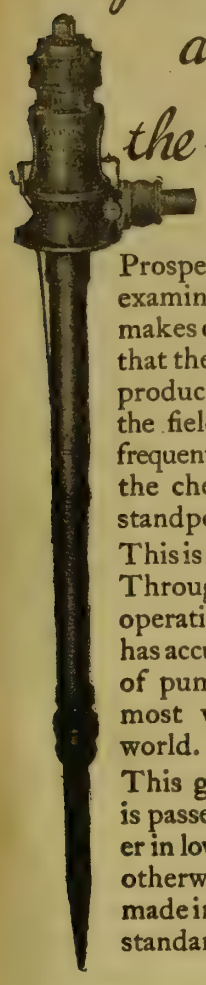
Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

*Why the best and yet the cheapest*



Prospective purchasers examining the various makes of pumps marvel that the Byron Jackson product not only leads the field in quality but frequently crowds even the cheapest from the standpoint of price.

This is not a trade secret. Through fifty years of operation this company has accumulated a stock of pump patterns, the most valuable in the world.

This great investment is passed on to the buyer in lowered prices that otherwise could not be made in view of the high standards maintained.

## GRADES FOR ALFALFA HAY IN OREGON

Standards for alfalfa hay have been fixed by the Oregon public service commission, effective June 15.

### Choice Alfalfa

Choice alfalfa shall be 98 per cent pure, of bright natural color, not over 2 per cent weather bleached, and not over 2 per cent plants with pods. It may contain not over 1 per cent worthless content, and not over a trace of harsh, bearded grasses. It shall be reasonably fine, sound, dry, clean, sweet, leafy and well baled.

### Number 1 Alfalfa

Number 1 alfalfa shall be 95 per cent pure, of good natural color, including not over 5 per cent weather bleached. It shall contain not over 2 per cent weeds, or other worthless content, including not more than a trace of harsh, bearded grasses, and the other 3 per cent may be other grasses of feeding value. It shall be dry, sound, sweet, reasonably leafy and well baled.

### Standard Alfalfa

Standard alfalfa shall be: Ninety per cent pure, of green color, and may contain not to exceed 10 per cent foreign matter and 10 per cent weather bleach. It may be of green color, coarse or medium texture with 15 per cent weather bleached hay, and 5 per cent foreign matter. It may be of greenish cast, of fine stem and clinging foliage, and may contain not to exceed 10 per cent foreign matter.

Standard alfalfa may contain not to exceed 3 per cent worthless content, including not more than a slight trace of foxtail. It shall be sound, dry, sweet, and well baled.

### Number 2 Alfalfa

Number 2 alfalfa shall be alfalfa hay containing not to exceed 25 per cent foreign matter, and bleached hay, either singly or in combination, and not more than a slight trace of fox tail or thistles, and shall be of fair color, dry, sound, sweet, and well baled, and not to exceed 10 per cent of worthless content.

### Number 3 Alfalfa

Number 3 alfalfa may contain 25 per cent stack spotted hay and may contain not more than 10 per cent foreign matter or it may be green color and may contain 50 per cent of foreign matter or it may be set alfalfa and may contain 10 per cent foreign matter—all to be dry and reasonably well baled.

### No Grade Hay

No grade hay shall include all alfalfa not good enough for No. 3.

The following rules are established: Worthless content shall include all kinds of weeds, thistles, ripe cheat, large damaged spots, old stubble, sage brush, roots, field soil, etc.

Harsh bearded grasses shall include foxtail as otherwise defined in these rules and cheat grasses Bromus rubens, Bromus sterilis, Bromus villosus and Bromus tectorum, when they contain well developed seeds.

Foxtail shall include squirrel tail grass Hordeum jubatum, wild barley, Hordeum murinum and Hordeum nodosum. It does not include wild millet or green and yellow foxtail or pigeon grass, Chaetchloa virdis and chaetochola Glauca.

Weeds shall include all plants other than grasses or those plants generally used for forage purposes.

Foreign matter is anything other than alfalfa.

Weather bleached hay shall be bleached hay inside the bale. Outside bale bleach shall not be considered as weather bleached hay.

Good natural color shall include hay of any green color that has not been bleached due to exposure to light or moisture. Red or light color of lower leaves and base of stems shall be considered natural color.

Trace shall not exceed ½ of 1 per cent.

Percentages shall be based on determination by weight.

## APPEARANCE OF FARM COUNTS

"If you will fix up your home, paint the house, set out some trees and shrubbery and improve the appearance of the place, you will get more consideration from the loan companies."

This is the way a banker put the matter to an Eastern Colorado rural community recently in discussing development plans. This banker gave a very practical turn to the advice which is so frequently brought to farm audiences by home demonstration agents. Extension workers think of home improvement from the standpoint of convenience, comfort and family content, but the banker's argument was from a new angle.

He said he had recently talked to officers of trust companies and asked them why certain communities seemed to be favored by larger loans on lands which were not more productive than the lands of neighboring communities where sums loaned were held to the minimum. These bankers declared that the home was always taken into consideration; that where evidences of neglect, such as poorly built shacks, unpainted houses or barns, run down fences and absence of machinery sheds were noticeable, the borrowing capacity of the farm owner was reduced in comparison with a neighbor who might have no better farm lands but who gave proper attention to keeping the premises in good condition and who provided a dwelling for his family worthy to be called home.

## COOPERATIVE FARM MARKETING

In Minnesota 78,314 farms, or 43.9 per cent of all farms in the state, reported cooperative marketing of farm products in 1919. Both cooperative elevators and cooperative creameries are numerous in this state.

Sales through farmers' marketing organizations in the United States in 1919 amounted to $721,983,639, or an average of $1,412 for each farm reporting. The most important products marketed in this way were grain, milk and cream, fruits and truck crops, according to The World Almanac's census summary.

The number of farms in the United States reporting cooperaitve purchasing of farm supplies through farmers' organizations in 1919 was 329,449, or 5.1 per cent of all farms. In six states, cooperative purchasing of farm supplies was reported by over 20,000 farms, as follows: Iowa, 32,530; Kansas, 32,321; Minnesota, 29,611; Nebraska, 27,335; Wisconsin, 21,792, and Ohio, 21,250.

Important items purchased cooperatively were fertilizer, feed, binder twine, spraying materials, coal crates, boxes, etc.

## JAPANESE AND OTHER ALIEN FARMERS IN THE UNITED STATE

Japanese, in 1920, says The World Almanac in a census summary, tilled 361,276 acres in California, 37,939 in Colorado, 25,340 in Washington, 11,357 in Idaho, 8,348 in Utah, 8,080 in Oregon, 5,714 in Montana, 3,527 in Arizona, 1131 in New Mexico, 601 in Nevada, 165 in New Jersey, 121 in New York, 7 in Wisconsin.

Chinese, in 1920, tilled 50,472 acres in California, 2,439 in Oregon, 1,599 in Washington, 822 in Arizona, 671 in Montana, 334 in Idaho, 227 in Alabama, 148 in New Jersey, 124 in Utah, 101 in Colorado.

Native white farmers, in 1920 tilled 799,431,898 acres; foreign-born whites, 111,176,522 acres; colored farmers, 45,068,125.

## ROCK SALT FOR ASPARAGUS

At the New Jersey experiment station rock salt was applied to asparagus beds for two years. Three plots were given 150, 300, and 500 pounds of rock salt, supplementary to liberal amounts of barnyard manure. The largest increase of crop on an old bed, planted 11 years, was 11.7 per cent and on a two year old bed, 17.1 per cent, both obtained with the largest amount of rock salt used, or 500 pounds. There were several plots of each amount of salt used and on one the gain in number of stems amounted to 28.8 per cent.

**I Can Save You Money on Fence**

I am specializing in farm fence materials. I buy steel posts and fencing in tremendous quantities which come in great boat shipments at lowest possible freight rates direct to my warehouses in Los Angeles and Oakland. This way I make possible enormous savings, and these savings I pass right on to my farmer friends. Furthermore, I guarantee personal service and prompt delivery.

**Red Top Steel Fence Posts**

The RED TOP Studded Tee is a new line post for heavy field, pasture, highway and railroad fence—stronger and better than any fence post on the market. My FREE catalog tells how nationally known engineers tested this post and found it 25% stronger than a new Punched Tee Post and 32% stronger than a Round Sheet Steel Post. **Be sure to read about this test before you buy fence posts.** The Red Top Studded Tee Post is a solid bar of Tee steel, without a single hole, equally strong throughout every inch of its length. **Nothing to weaken this post; everything to strengthen it.** (See illustration.) I recommend it as the most durable post on the market. Prices are so reasonable that you cannot afford to buy even wood posts.

**LOOK!**

THE minute that pocket gopher touches the cork, he is a dead gopher. The Getsem Gun never fails. It gets them every time. You have tried traps and poison with fairly good results, but with a Getsem Gun you get him and you know you get him because every time the gun barks you drag out a dead gopher.

Liebers "Getsem" Gun is simply a small shot-gun specially made for killing pocket gophers and other destructive pests. It shoots standard .410 shot-gun shells.

How It Operates

Just scrape away the pile of dirt and spike the gun in the ground with the muzzle pointing down the hole. Set the trigger and insert firing pin. In a few moments Mr. Gopher comes up to close the hole, bumps into the cork on the trigger wire and Bang! there's a dead gopher. It never misses.

**72 Gophers with 75 Shells** is what one farmer did with a Getsem Gun. Another shot 200 pocket gophers this summer.

Send $3.85 for one Getsem Gun or $11.00 for three. Absolutely guaranteed to satisfy or your money refunded. Ask your dealer—if he can't supply you send your order direct to us—or send for circular.

LIEBERS EQUIPMENT CO., 813 R Street, LINCOLN, NEBR.

**Turn Stump Land Into Money**

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Showing easy lever operation

# Livestock News Notes

LIVESTOCK SALE CALENDAR

October 26, C. W. Anderson, Burbank.
November 16, Dispersal, Arthur & Maxfield Holstein Co., Hanford.

The farm adviser of Inyo County is organizing a calf club and some of the boys have specified Ayrshire heifers. W. R. Ralston of the state leaders office, college of agriculture, Berkeley, is handling the matter for the banks of Inyo County.

Paul Hill who has been associated with the Hartford Livestock Insurance Company for a number of years has resigned in order to become affiliated with his father in a livestock commission business in connection with the new union stockyards in Los Angeles.

Fred Hartsook is going to sell 60 of his fine Holsteins at public auction on November 10. The breeders are anxious for the progeny of his great bull, Sir Aaggie De Kol Mead, and he is selling a lot of very fine cows and heifers bred to this sire. Every animal in the sale is hand picked from the big Hartsook herd of nearly 300 females, and since it is the owner's intention to make this an annual affair his first sale will include some very choice individuals who have made big records. The sale will be managed by C. L. Hughes of the California Sales and Pedigree Company.

An error was made in reporting the winners of the breeders young herd in the Duroc hogs at the state fair. This class was won by Charles J. LeMoyne of Lankershim. His herd was made up of the junior champion boar and some of the best gilts in the show and was obviously the best one in the ring.

The extension committee of the Holstein-Friesian Association of America announces the reorganization of the extension service, the appointment of Fred A. Koenig, formerly in charge of publicity, as director; Earl J. Cooper, formerly of the Wisconsin college of agriculture, in charge of junior work; W. B. Barney, 12 years dairy and food commissioner for Iowa, specialist in dairy products, and Edward G. Horst, formerly livestock representative of The Prairie Farmer, as publicity man. Headquarters of the extension service have been established at 230 East Ohio Street, Chicago, Illinois.

Valef's Grace Dereen of L, a Jersey cow owned by J. H. Sawyer of Galt, has qualified for the Register of Merit with 783.33 pounds fat from 13,701 pounds milk. She made over 50 pounds fat each month and averaged 5.72 per cent for the year.

Lydia's Valentine 604276, owned by H. G. Gross of Eureka, is now junior 3 year old class champion of California. She started test at three years of age and in 362 days produced 9413 pounds milk and 606.58 pounds butterfat, exceeding the class record by 15.19 pounds butterfat. By meeting the calving requirements Lydia qualifies for class AA and a silver medal. Her average test was 6.44.

At a meeting of the State Swine Breeders Association resolutions were drawn up requesting changes in the method of classifying the barrows and asking for some small improvements in the hog barns. These resolutions are to be presented to the board of directors early enough so that some action can be taken before next year's fair.

The Brant ranch of Owensmouth was unable to show Guernseys this year but contributed to the success of the show by sending up a large working model of the dairy department of the ranch. This was displayed in the space set aside for a resting place for the Guernsey breeders.

The Berkshire men are rejoicing because the grand champion barrow of the last two shows has been a Berk shown by the Italian Vineyard Company and the first prize carload has been Berks shown by Napa State Hospital.

## PREDATORY ANIMAL CONTROL

The losses to California stock and poultrymen through the ravages of predatory animals have been conservatively estimated at four millions of dollars a year. With the limited force of men at the disposal of the California department of agriculture and the biological survey cooperative service, it is true that operations have not been on the same state-wide basis as obtained in the ground squirrel eradication work, but notwithstanding, the efficiency of the campaign is attested by the fact that in localities where such operations have been conducted the animal losses have been reduced from 10 to 20 per cent of annual increase of stock to less than 1 per cent.

Since July 1, 1921, the following counties have cooperated: Humboldt, Napa, Solano, Monterey, Lassen, Lake, Yuba, Nevada, and others are offering their services and soliciting state aid. Losses in stock and poultry in counties where the cooperative work has been conducted, have been reduced 93 per cent. Between 4000 and 5000 coyotes and cats were killed during the fiscal year ended June 30, 1922, and many hundreds died of poison that were never found or accounted for. It should be remembered that this warfare on predatory animals is not inspired as a warfare for pelts, although the skins are sold at government sale and the proceeds turned into the state treasury.

## WASTING VALUABLE FOOD

That the scientific world is neglecting a vast opportunity to discover uses for dairy by-products was the statement made in an address by Prof. H. E. VanNorman, president of the World's Dairy Congress, in addressing the Eastern Section of the American Dairy Science Association. For every pound of butter we eat three pounds of milk solids are produced which are highly valuable for human feeding, he said. At present all except a trifling part of these solids are used at comparatively small profit in the feeding of calves, hogs and chickens. In 1921 nearly 36,000,000,000 pounds of mill were used in the manufacture of butter, yet only 1,700,000,000 pounds of butter were turned out. Out of the remaining billions of pounds of skim milk and butter milk, besides a small quantity of butter milk sold the public, only 700,000,000 pounds were utilized for skim milk powder and skim milk and cottage cheese. That year, also, 13,650,000,0000 pounds of whole milk were used in the manufacture of cheese, yet only about 356,000,000 pounds of solids were left in the cheese. Of the billions of pounds of whey remaining, only 32,000,000 pounds were used for crude milk sugar. In addition, about 269,000,000 pounds of skim or cheese whey were used in the manufacture of dried casein. However, all told, only a scant billion pounds of the by-products of butter and cheese were made use of in a really profitable manner beside the butter milk disposed of. In other words, only 2,140,000,000 pounds of solids, out of a possible 4,300,000,000 contained in the 36,000,000,000 pounds of milk that were used in the manufacture of butter and cheese, were utilized for human food or for casein for industrial purposes, according to the figures of the dairy division of the United States department of agriculture.

## COST OF WEANLING PIG TO A PENNY

What has that weanling pig cost you? You are in the pure bred hog business primarily to make money, and should know.

Your sow during the year produces two litters of ten pigs each, but saves only six out of each litter or 12 pigs at weaning time, per year. She weighs 400 pounds and consumes in a year about 2000 pounds of feed. You are feeding her a ration consisting of corn 55 parts, oats 35 parts, tankage 10 parts.

This costs you $32 per ton, or $32 per year, to feed the sow. She cost $50 and your boar cost $100, and is used with ten sows.

The pigs when born weigh about three pounds and make a daily gain of eight-tenths of a pound fed through the sow. They consume about 2.2 pounds feed per day. At 50 pounds weight they have consumed about 125 pounds grain per head, costing $2.

This gives the following figures per sow each year:

| | |
|---|---|
| Cost of sow $50; interest at 8 per cent | $ 4.50 |
| Depreciation (sow produces 12 litters and sells for $24.00) | 4.33 |
| Feed cost sow per year | 32.00 |
| Cost of boar $100; interest per sow | .80 |
| Feed cost boar per sow | 5.00 |
| Feed cost 2 litters | 24.00 |
| Shelter | 4.00 |
| | $74.63 |

Then each pig at weaning time has cost $6.24. If the pig is registered and immunized an additional expense of $2 should be added. The pigs costing $8.24, if sold for an average price of $15.00, will return a profit of $6.76 per head. Ten sows, then, would return a profit, cost of labor excepted, of $811.20.—E. J. Maynard, Colorado agricultural college.

## "SILO JUICE"

There are two classes of errors made about silage, the first being made by people who know of silos only by hearsay. Some people believe that silage burns out cows' stomachs and loosens their teeth, and that cows and hired men both get drunk on the juice that runs out of the silo. The writer has been feeding silage, or has been more or less directly connected with silage feeding for over 20 years and knows of no such injurious results. Many cows have been eating silage for ten years without injury. The teeth of the cow are naturally loose. There is no more reason for silage eating out the stomach of a cow than for canned peas hurting the stomach of a man.

The other class of mistakes is due to misplaced optimism. Silage is not a "miracle feed" to produce results by itself. It is not a balanced ration. It is not a hog feed, or especially horse feed, though hogs and horses can use some silage. It is not a substitute for grain, although some people try to use it as such. Silage is a feed for cattle and sheep and a substitute for dry roughage. The silo method is a substitute for wasteful ways of handling forage. It takes from two to three pounds of silage to equal a pound of good hay in feeding value, though in the right combinations it may sometimes appear equal to hay, pound for pound. Balanced rations and full feeds are just as necessary when silage is used as without silage—Charles I. Bray, Colorado Agricultural College.

## FEEDING BROOD SOWS

Brood sows must have enough protein in their rations to keep up with the requirements of the suckling pigs. Farm grains alone do not supply enough protein for heavy milk production. Skimmilk, buttermilk, middlings, oilmeal and tankage will balance a ration of farm grains under the conditions given.

The trend of farm planning seems to be toward more dairy cattle, more hogs, more poultry, and more potato acreage, with less oats and more grass.

An investment in a purebred sire yields dividends with every calf.

The 1922 Modesto Fall Sale
50 Registered Holsteins 50
Thursday, November 2 Modesto, California

Drafts of choice cattle from a number of leading Stanislaus County herds will make up this offering.

GUARANTEED BREEDERS—SOLD SUBJECT TO RETEST

Later announcements will outline the animals to be sold and names of consignors, also exact place of sale which will be right close to Modesto.

Write for catalog now.

Management
CALIFORNIA BREEDERS SALES AND PEDIGREE CO.
C. L. Hughes, Sales Manager, Sacramento, Calif.

**Do You Prefer to Buy from Mail-Order Houses or Your Home Town Stores, and Why? You Can Earn $2.00**

For the 100 best answers to the above question, we will pay $2.00 each. This question is advertised so we may know best how we can make our unusual offer of two regular $1.00 packages of LAYMORE (makes hens lay in fall and winter) for only $1.00 for the two packages. Replies to the questions (and orders also) are to be sent to the MAYER COMPANY, Dept. 20, Minneapolis, Minnesota. LAYMORE, it will be remembered, produced 540 eggs from a flock of 20 hens.

# Ventura County Fair

A REGULAR old fashioned county fair and one of the best we have seen in recent years," was the concensus of opinion on the fair held at Ventura last week.

Set in a beautiful park, the gift of one of the leading citizens to the county, and right on the ocean front, the location is ideal for fair purposes. The men in charge are a bunch of hustlers and each year the increase in the size and quality of the exhibits is remarkable. Men who have shown there always want to go back and take their friends.

The large livestock quarters were filled to overflowing this year by the best the state affords. On account of the mountainous character of a large part of the county it is a great range cattle country and everyone has a keen regard for good horses. Probably at no place else in California can so many beautiful horses and such extravagant silver trimmed equipment be assembled. Also the bean and orange and lemon men of the lowlands use many draft animals, and there were more horses, jacks and mules on hand than at any other fair so far. A large number of registered jacks and horses have been taken into the county in the past year, and they were all on hand, polished and shined to the highest degree.

Practically all of the cattle and hogs came from other parts of the state as Ventura County has not yet taken her place in the sun as a breeding county of purebred stock. The one big Holstein herd of the county was not present on account of a difference of opinion between the owners and the fair management. Hartsook's big herd was the sole representative of the Holsteins and G. E. Gordon of Los Angeles placed the individuals much as before. The young bull, Tritomia Pansy Ormsby, was grand champion.

Jim Thorp and the Waterloo Jersey Farm presented the Jerseys and Thorp won most of the ribbons. Jolly Senator Raleigh was grand champion bull and Salome won the cow honors.

The Gantz Ayrshires were alone but the size of the herd allows it to make a fine showing. The Dibblee Estate showed Shorthorns including one of the sweetest two year old heifers we have seen in a long time. C. S. Howard of San Francisco sent his small herd of Herefords which includes the grand champion cow of the state fair.

Two fine herds of Guernseys were shown by the Italian Vineyard Company and A. B. Humphrey. Honors in the classes were about even but Humphrey won all championships. Mayhew's Bonnie Lass, the two year old who was grand champion of the state fair, was defeated by Caroline E. Langdon of Hollow-Hill Farm who was later placed second to the Humphreys cow, Phyllis of Mayhew for champion. The get of Effie's King of Hollow-Hill Farm won over the get of Nobleman of Maple Hill which had defeated them at the state fair.

The hogs were well represented in all breeds, which is unusual for a county fair. Humphreys and the Italian Vineyard again fought it out in the Berkshires. Humphreys won the boar championship on Escalon Big Joe, and Violet's Festline was again champion for the Italian Vineyard Company. Honors in this breed were also divided between these two herds which are the best in the West.

Thorp and Le Moyne displayed Durocs and split the ribbons but Le Moyne won both championships. Le Moyne's junior yearling sow and his aged boar are both hard to fault.

Buckland had little opposition in the Polands, and lost but two ribbons. Dr. Summerfields Tamworths were alone also and won all classes.

Two large herds of Hampshires were there but Underhill was too strong for Carl Miner of Ojai and took most of the honors.

A sweepstakes prize for the best five cows in milk was won by Fred Hartsook's Holsteins with Thorp's Jerseys second and the Gantz Ayrshires third.

### Community Exhibits

Seven communities competed for honors in booths showing farm products. The judges awarded on the following points and per cents: quality, 30; variety, 20; originality, 20; educational, 20; execution, 10. The standing in the totals was as follows: First, Mound; second, Santa Paula; third, Simi-Santa Susana.

The citrus exhibits were not competitive, but fine displays of lemons in booths were made by the Limoneira Company, Rancho Sespe, George C. Power, and Oxnard Citrus Association. In oranges the Mupu, Ojai and Piru Associations had box exhibits. Fillmore displayed both oranges and lemons. The largest number of prizes for horticultural products was won by 19 year old James Thurmond, of Saticoy, who also received a blue ribbon in the calf club contest.

## PROF. REGAN COMES TO DAVIS.

Announcement is made of the appointment of Professor W. M. Regan to the staff of the animal husbandry division of the California college of agriculture. Professor Regan will be in charge of the dairy production work at Davis. He comes to this state from New Jersey college of agriculture where he was at the head of the dairy department. From New Jersey we have this word as to Prof. Regan's work:

Prof. W. M. Regan

"During the five years that Professor Regan has been in New Jersey, he has built up one of the best managed and supervised Advanced Registry systems in the country. Since 1919 Professor Regan has been superintendent of livestock exhibits at the Toronto interstate fair; has built up the exhibit until today Trenton has one of the best shows in the country. He instituted the most rigid tuberculin test regulations. He sponsored the county show herds which have been responsible for giving Trenton a greatly enlarged dairy cattle exhibit, and one of the very best Holstein shows in the country. This has brought the little breeders and plain farmers into the show ring with their cattle from all over the state."

## PACIFIC COAST RECORDS BROKEN

One of the most noteworthy records ever completed on the Pacific Coast is that of Hollywood Lilith Palmyra Abbekerk, 400491, in the herd of the Los Angeles County Farm

In 305 days as a senior four year old this wonderful cow has made 22,245 pounds of milk and 982.94 pounds of butter, which is the Pacific Coast record for both milk and butter and the second highest record for milk and for butter ever completed by any animal of the breed. This record is all the more remarkable because made following the birth of twin calves and is the highest record ever made in this class by any cow having twin calves At the beginning of this lactation period the world record was held by Rose De Kol Wayne Butter Boy, and her production figures were exceeded by the County Farm cow by just .9 pounds of butter and 829 pounds milk but meanwhile another star had risen and annexed the world's record with a little greater production

If it had not been for a rather serious injury by a fall to the County Farm entry in May, which reduced her production in the last three months, it is probable that she would now be in first place for both butter and milk. This is the second long time production record made by this cow, the first beginning at the age of three years, six months, 27 days, when she made 21,608.8 pounds milk, containing 883.7 pounds butter, in 365 days. During this lactation she was shipped from Seattle to the County Farm, went through the public sale ring and carried twin calves during nearly one-half of this period.

## WHO MAKES THE PROFITS?

Only high producing cows are economical producers. Low producing scrub cows are always the ones that consume the most feed in proportion to the milk and butterfat produced.

This fact is proven again by the past year's results in the Webster County cow testing association, according to E. M. Harmon of the Missouri college of agriculture. The cows which averaged only 100 pounds butterfat per year, produced that butterfat at an average feed cost of 25.6 cents per pound. This cost gradually decreased as production per cow increased. The cows which averaged 200 pounds fat for the year produced that butterfat with an average feed cost of 16.1 cents per pound. Those that averaged 300 pounds fat per cow showed an average feed cost per pound fat of 12.8 cents, and with the 400 pound cows the average feed cost for each pound butterfat was only 11.4 cents. The profit per cow above feed cost varied from $18.27 in the case of the lowest producing class to $115.10, in the case of the cows averaging 400 pounds of butterfat per year.

The average Missouri cow is credited with from 100 to 110 pounds butterfat per year. According to the above results these average cows charged their owners over 25 cents worth of feed for every pound of butterfat they produced last year. Through the cow testing associations a few herds have been developed which average over 400 pounds fat per year. A great many average over 300 pounds fat per cow in a year. These herds last year cost their owners only 11 cents to 13 cents for each pound butterfat produced. Who makes the profits?

"Fairy Boy's Mary Margaret, a Jersey cow, owned by T. B. Purvine of Petaluma, has completed her year's test with 11,343 pounds milk and 664.57 pounds fat as a junior four year old.

# Mammoth Dispersal!

# 300 HOLSTEIN FEMALES

## MINOR & THORNTON HERD
## FRESNO, CALIF.

## October 26 and 27

This long established herd was founded upon selections from the Pierce and Sherman herds, blood that has produced many of the great record makers and show ring winners of California.

Approximately 90 of the cows in this herd are registered, and at least 90% of the balance are unregistered purebreds that will be sold as grades.

### OVER 100 MILK COWS

More than 100 milk cows are in the offering, including a large number of fresh cows and heavy springers.

### OVER 100 BRED HEIFERS

More than 100 bred heifers are in the offering, many of them heavy springers.

The property upon which these cattle are located has been sold and the cattle must be off the place by November 1st.

**There Are Sure to Be Many Great Bargains in This Offering.**
**Be There to Take Advantage of It.**

Terms of Sale:—Responsible parties may secure terms of one-third cash, balance in three, six, and nine months, if arrangements for credit are made prior to sale with California Breeders Sales and Pedigree Co.

# Both Quality and Numbers

Not only the quantity of livestock, but the quality as well would suffer at the Pacific International Livestock Exposition were California not represented. This great show is held at Portland, Oregon, November 4 to 11 this year. It follows the California National Livestock Exposition at San Francisco, there being two weeks between which gives ample time for the proper shipment of the livestock.

Located 800 miles to the north in a part of the country where particularly fine livestock has always been produced, it is a source of self congratulation to California that last year with much smaller entries than the northern states, California breeders won two championships in Shorthorns; two in Herefords; four in milking Shorthorns; one in Southdown sheep, two in Corriedales, one in Border Leicesters, two in English Leicesters; and three in Duroc-Jersey hogs. This is a remarkable showing of purples under the circumstances, but the breeders of other parts of the Pacific Slope are as eager as ever to compete with their best livestock against California.

**To Be at the Pacific International**
Sultan's Dale owned by Pacheo Cattle Company was junior grand champion at 1921 fair.

The Pacific International Livestock Exposition is not a young institution, having been in existence, in embryo at least, a good many years. It attracts breeders of every kind of livestock from a very wide area, fine herds and flocks coming from British Columbia on the north, Texas and New Mexico on the south, and last year drawing two wonderfully fine dairy cattle herds (Guernseys and Ayrshires) from as far east as Massachusetts and Vermont.

The building at North Portland is a model of its kind and the largest livestock building in the world. It covers ten acres all under one roof and is as conveniently arranged as can be imagined. In 1921, there were 3,500 head of livestock at the Pacific International; this year indications are that the number will be greatly increased and it is expected that a good share of the increase will come from California.

A much larger showing of dairy cattle is expected this year, with no diminution of beef cattle, sheep, hogs and horses. There will be some wonderful animals at the Pacific International this fall. The world's champion Jersey butter fat producer, Lad's Iota, will be there; the world's champion Holstein butter fat producer, Segis Pietertje Prospect, will be there also; and the third of the world's champions, Blosson of Three Oaks, a Saanen milk goat from California, has also been promised for this show.

O. M. Plummer, the presiding genius of the Pacific International, attended the state fair at Sacramento and saw most of the breeders who were there. It sounded as though they all promised him they would come to Portland, and it was indicated that 25 or 30 carloads of purebred livestock would start north after the San Francisco show. These will be the very finest produced in California and that means in the world.

The $75,000 offered in premiums is a drawing card. It is worth mentioning that $3,500 in prize money is offered to boys' and girls livestock clubs this year. Of more immediate interest in this state is the inauguration of a livestock judging contest between teams representing the high schools with vocational courses. A large number of teams are expected to compete in this state. The college judging teams will be there in force. California has always stood high.

The exposition is not local in character and draws from the entire Pacific slope. Its directorate is represented by men in California, Oregon, Washington, Idaho and Montana. It deserves the support of the livestock industry in all of these states as it serves them all.

## TESTING PROVES WORTH

Recently completed records in the Los Angeles County farm dairy herd include that of Henrietta Luecke Colantha, senior four year old, 25.70 pounds of butter from 466.8 pounds of milk. She will be continued on yearly test.

Concordia Segis Phoenix, at 10 years of age, made 24.09 pounds of butter and 586.3 pounds of milk in seven days, later milking as high as 95 pounds of milk per day on semi-official test.

Whittier Pontiac Netherland 4th, the 1139 pound, state champion, four year old, has freshened again with a beautiful heifer calf, sired by King Korndyke Pontiac Mead. This calf traces three times to the famous foundation matron, De Kol of Valley Mead, through both sire and dam. The descent from De Kol of Valley Mead is through an 1100 pound, three year old and an 1100 pound four year old, and twice through the thousand pound four year old, De Kol of Valley Mead, 2d—all of these cows having held state or world records.

## CALIFORNIA MEN AT NATIONAL DAIRY EXPOSITION

California delegates attending the National Dairy Exposition at St. Paul this week are C. E. Gray of San Francisco, president California Dairy Council and of California Central Creameries; Sam H. Greene of San Francisco, secretary manager California Dairy Council; Prof. C. L. Roadhouse of Davis, manager Pacific Slope Dairy Products Show; George W. Prising of San Francisco, dairy machinery man; B. H. Rawl, of San Francisco, assistant general manager, California Central Creameries; E. C. White of San Francisco, dairy machinery dealer; Ben W. Annixter, of San Francisco, creameryman; T. D. Chapman of Los Angeles, ice cream manufacturer; D. M. Dorman of Los Angeles, creameryman; W. Stabler of Los Angeles, creameryman; M. Alfred, of Los Angeles, ice cream manufacturer; J. S. Calkins, of Los Angeles, ice cream manufacturer; L. A. Hughes of Los Angeles, ice cream manufacturer.

Tentative plans for a Poland China sale to be held in Southern California this winter were made at the annual meeting of the Poland China Association.

# Hemp in Arizona

By M. E. Bemis

FOR some time there has been more or less speculation as to the possibilities of hemp as a commercial crop in the irrigated valleys of Arizona. The Phoenix chamber of commerce in order to have this matter tested obtained some seed from the United States department of agriculture and distributed it among a number of growers. Complete reports will not be available for some time, but, without question, the most reliable data will be had from the plots at the Salt River Valley experiment farm at Mesa.

Two varieties of hemp seed were obtained, one, the common variety, which is universally known as Kentucky hemp; and the other a hybrid which originated at the experiment farm near Washington, D. C. This variety is known as the Tochimington.

It was presumed that there would be little probability of growing hemp fiber on a commercial scale as labor costs are greater than in most sections where hemp is grown for the fiber. It was thought, however, that inasmuch as hemp does not mature seed in the northern states where it is grown for fiber that there might be possibilities of growing seed commercially. The results at the station so far indicate that this may be true.

The Tochimington variety was planted for seed in check rows five feet apart each way. This has attained a height of eight to ten and 12 feet. The Kentucky variety was planted adjoining and sown broadcast.

Some old hemp growers familiar with this crop in Kentucky are making careful observations at the experiment farm and believe that the Kentucky variety, while not planted for seed purposes, will prove better adapted and will produce seed in quantities that should make its growing profitable. Of course, the harvest will determine this more definitely.

There is a possibility that hemp might have some other uses here for shade and ornamental purposes. The character of the leaf is such that it makes a shade somewhat similar to that of the umbrella tree which is generally conceded to make the best shade although having many objections which do not encourage the planting of this tree.

For annual shade, and one which will also be ornamental, it would appear that the hemp might have considerable advantage over the castor bean which is universally grown for this purpose in the Southwest. I am inclined to believe that for shade in chicken yards, or wherever castor beans are now planted, that hemp will serve the same purpose equally well and will be fully as easily grown and quite probably will furnish a more satisfactory shade.

# Manure Preservatives

Much advice has been given on the preservation of manure, some of it based on sound principles and some merely on hearsay. Nothing very definite has been known about what takes place in the manure pile, however, except that nitrogen is lost through the ammonia which is given off and that other valuable plant food constituents may be lost by leaching if the manure is exposed to the weather. Most directions for the care of manure, therefore, include a recommendation for storing the manure in a covered shed or pit and usually advise the use of some material believed to have a beneficial effect in preserving the nitrogen otherwise lost as ammonia.

The New York agricultural experiment station at Geneva now comes out with a report in Bulletin No. 494 on a series of investigations of a number of manure preservatives in which careful chemical and bacteriological studies were made of the effect of the various materials on the changes taking place in the manure pile. The conclusion is reached that most manure preservatives are of little value in checking the loss of nitrogen. Horse manure was used in all the experiments and straw, peat, acid phosphate, rock phosphate, and gypsum were compared as preservatives.

The results obtained demonstrated to the satisfaction of the station experts that acid phosphate is the most efficient and only practicable material that can be recommended at this time as a manure preservative. In the experiments the amount of nitrogen lost ranged from 15 per cent for manure treated with acid phosphate to 51 per cent for untreated manure. The loss in dry matter after four months' composting ranged from 25 per cent for manure and acid phosphate to 63 per cent for untreated manure.

The experiments also showed the benefit of immediate application of the preservative to the manure, even if the latter is to be hauled out and spread on the field as soon as voided. It is suggested that two handfuls of acid phosphate be scattered in each stall each day, the trampling of the stock being regarded as the most efficient means of mixing the material with the manure.

Along the same line the Ohio experiment station at Wooster has been making observations and has issued the following statement:

Fresh stable manure lost one-third of its nitrogen, one-fourth of its phosphorus, and one-half of its potassium content when exposed in open yard for three months of winter weather in tests at the Ohio experiment station.

The loss in fertilizer value of the manure was even greater than indicated by these fractions, it was explained, for the more available constituents are the first to be lost by leaching.

The loss of nitrogen and potassium from each ton of manure is fully equal to the amount of these elements carried in 150 pounds of a 2-12-3 fertilizer costing at least $1.75 after deducting the price of the phosphorous. These losses may be largely prevented by keeping the manure under cover or hauling directly to the field.

When the elements in the manure are properly balanced by a liberal application of acid phosphate they easily produce this amount in increased crop yields.

## SMALL POTATOES AND SEED SELECTION

The small potatoes from healthy, vigorous plants are just as good for seed purposes as pieces of the large tubers from the same plants, declares the potato expert at the experiment station at Geneva, New York. In careful studies made at the station the yield of marketable tubers from whole small seed potatoes exceeded that from pieces of large potatoes from the same plants by almost 17 bushels per acre. It is the opinion of the station specialist that the disadvantages of whole small seed potatoes have been overestimated.

Where a special seed plat has been maintained and all diseased plants carefully removed there is no reason why the small tubers will not give as good, if not better, results than pieces of the large tubers from the same plants. The continued selection of small tubers year after year, of course, is not advisable. Neither is it desirable to use small tubers from the main crop, in case a special seed plat has not been established, unless the diseased and weak plants have been removed from the field. Also in buying seed potatoes from outside sources it is always best to insist on medium sized tubers unless the potatoes come from a field which has been certified by a regularly authorized inspector as being free from mosaic, leafroll, spindling sprout, etc.

In other words, if the seed potatoes are known to have come from healthy, vigorous plants, the small tubers will be just as satisfactory as the large tubers for seed purposes.

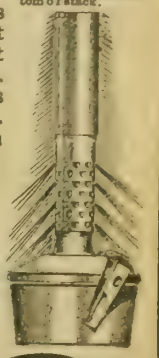
Insure Your Orchard!

The DUNN With Improved Lower Stack, Umbrella Cover and Removable Top Cover.

It is important that orchardists insure their crops against frost and freezes—because when killing frosts do come—the loss is appalling. These losses can be eliminated. DUNN Orchard Heaters completely solve the problem.

650 thousand DUNN Orchard Heaters in use by California citrus growers. Hundreds of thousands this type used elsewhere in U. S. Most effective because of exclusive patented features. Improved lower stack with perforations depressed to inside, radiates heat to side and down—with most heat at bottom of stack. Perfect combustion. All heat—no smoke. Joints fit tightly. Only draft is through patented downdraft tube. Heat generated rapidly; maximum protection secured at once.

Improved stack with perforations depressed to inside. Radiates heat to side and to ground—with most heat from bottom of stack.



The DUNN Orchard Heater

is the only orchard heater with permanent asbestos lighting wick. Lights quickly and stays lit. Burns clean as a gas jet. Uses less oil. 9½ gallon heater burns 20 hours at 100% efficiency, without refilling. Patented swedge on bowl is hand grip for carrying heater. Made of 24 gauge extra heavy Keystone Copper Bearing Steel. Seamless bowl and cover.

Orchard Heaters Needed Everywhere

Growers of oranges, grape fruit, limes—apples, peaches, pears, plums, cherries, berries—every orchardist—from largest to those with less acreage—you should make prompt inquiry as to the DUNN Orchard Heater and how it protects profits.

Records—everywhere—show DUNN Orchard Heaters do pay hundreds of dollars on investment. First cost—except for fuel—is only cost. Depreciation based on actual facts, less than 2 per cent for 8 years.

## IN AN AMERICAN DESERT

One of the driest parts of the United States is what is called the Papago country, a region including about 13,000 square miles in southwestern Arizona, so called because it was long ago inhabited by the nomadic Papago Indians. This broad expanse of desert country, which lies between Gila River and the Mexican boundary, contains many groups of volcanic and other mountains separated by broad alluvial basins, which though the rainfall is small and the temperature is high, sustain a scant growth of desert plants, including orchard like groups of strange trees. Here the bold slopes of the mountains, the general absence of watering places, and the peculiar forms of the vegetation impress the traveler strongly with the majesty and the mystery of the desert and excite his wonder as to the origin and history of the natural features.

A report on this region by Kirk Bryan, has just been published by the United States geological survey as Bulletin 730-B, under the title "Erosion and Sedimentation in the Papago Country, Arizona." The report describes the geology briefly as a setting for a consideration of the agencies that have produced the forms of the land and presents detailed conclusions as to the mode of origin of the desert landscape. The paper is illustrated with diagram, views and maps and should be of interest to all students of topography and physiography, particularly those who are endeavoring to solve problems of erosion by wind and water in desert regions.

---

The federal bureau of markets figures an annual loss of a hundred million dollars from spoilage of perishable foods in transportation.

---

Group flower beds. When they are scattered all over the lawn they are ugly, take more work, and make the lawn seem smaller.

## NICKNAMES OF STATES

A question often asked in vain is: "What are the nicknames of the states?" Following is a complete list, taken from The World Almanac:

Alabama—"Cotton," "Lizard."
Arizona—"Sunset," "Apache."
Arkansas—"Bear," "Bowie."
California—"Golden," "El Dorado."
Colorado—"Centennial," "Silver."
Connecticut — "Nutmeg," "Freestone."
Delaware—"Diamond," "Blue Hen."
Florida—"Peninsula," "Everglade."
Georgia—"Cracker," "Buzzard."
Idaho—"Gem."
Illinois—"Sucker," "Prairie."
Indiana—"Hoosier."
Iowa—"Hawkeye."
Kansas—"Sunflower," "Jayhawk."
Kentucky—"Blue Grass," "Corn-Cracker."
Louisiana—"Pelican," "Creole."
Maine—"Pine Tree," "Old Dirigo."
Maryland—"Old Line," "Cockade."
Massachusetts—"Bay," "Old Colony."
Michigan—"Wolverine," "Auto."
Minnesota—"Gopher," "North Star."
Mississippi—"Bayou," "Eagle."
Missouri—"Ozark," "Iron Mountain."
Montana—"Stub Toe," "Bonanza."
Nebraska—"Antelope," "Black Water."
Nevada—"Silver," "Sage Brush."
New Hampshire—"Granite."
New Jersey—"Jersey Blue," "Garden," "New Spain."
New Mexico—"Sunshine," "Spanish."
New York—"Empire," "Excelsior."
North Carolina—"Old North," "Turpentine," "Tar Heel."
North Dakota—"Flickertail," "Sioux."
Ohio—"Buckeye."
Oklahoma—"Boomer."
Oregon—"Beaver," "Web-Foot."
Pennsylvania—"Keystone," "Steel," "Coal."
Rhode Island—"Little Rhody," "Plantation."
South Carolina—"Palmetto."
South Dakota—"Sunshine," "Swiagecat."
Tennessee—"Big Bend," "Volunteer," "Hog-and-Hominy."
Texas—"Lone Star," "Beef."
Utah—"Desert," "Mormon."
Vermont—"Green Mountain."
Virginia—"Old Dominion," "Mother."
Washington, "Evergreen," "Chinook."
West Virginia—"Panhandle."
Wisconsin—"Badger," "Copper."
Wyoming — "Equality" (Suffrage Pioneer).

---

## HUBAM

Iowa and Alabama are still pushing hubam, a clover named after Prof. Hughes, formerly of Iowa, and the state of Alabama. Prof. Hughes is now with the Alabama station and writes most hopefully of this clover which has been but little tested in California.

We note that an Ohio producer says: "We sowed a part of the seed we raised last season, with oats. We cut before the oats was ripe for green feed. The clover was then about 30 inches high. The clover started up again nicely, then in August we cut the clover again, a fair crop of green feed. The clover started again and blossomed and set seed and we think ripened seed enough to well seed the ground again. The rest of our seed we sowed in three rows for seed. We had a very hot dry summer here and the clover grew only about four feet high, but made a very good crop."

---

## THE CHINESE LYCHEE

Studies in China of the lychee nut tree, Litchi chinensis, or Nephelium litchi, show that we may not expect to grow this tree on all kinds of soil. It was found that an acid soil is most favorable and promotes the growth on the roots of tubercles containing mycorrhizal fungi which are apparently beneficial to the plant. Lack of winter dormancy is also detrimental, according to Walter T. Swingle, as the lychee will grow at very low temperatures.

---

Grass is the foundation of the cattle business. Every fire on pasture land is a direct loss to some cattle man and adds to the cost of producing meat.

## HARVESTING GRAIN SORGHUMS

Demonstrations of harvesters of grain sorghums were given at the university farm at Davis, September 30. Entirely successful results were shown by four harvesters, giving assurance of more economical handling of those grains at harvesting time. We will give later illustrations of machines in action. Regarding the demonstration Prof. Hendry writes:

"About 100 farmers attended and the machines performed, for the most part, in a very satisfactory manner. Our crop of White Yolo was so uniform and so well matured that we were able to operate a small combined harvester with satisfactory results, without heating of the grain in the sack. We also demonstrated a 12 foot International push header, which cuts four rows at a time and recovered practically all of the heads. The other smaller machines, such as the John Deere, Reschke and the Ventura all did satisfactory work and would be adapted to smaller acreages.

"Our particular crop was grown on summer fallow without irrigation and yielded at the rate of one ton of threshed seed per acre, which would be worth $24 gross at present prices. The entire cost of production, including tillage, seed, planting, cultivating, hoeing, harvesting, threshing, sacks, hauling, etc., has been about $14, or the crop has returned a net of about $10 per acre. The crop was produced without irrigation, but the winter rainfall was conserved by early fall plowing followed by frequent spring working to maintain a good tilth and hold moisture near the surface until planting on or about April 20.

"We also found it advantageous to thin the stand when the plants were two to three inches in height by crossing the rows with a beet cultivator equipped with spear head sweeps set to cut out from one-half to two-thirds of the stand. At maturity the crop presented a very uniform appearance and all of the heads were carried on straight stems at a height of about four and one-half feet from the ground.

"On the whole the demonstration illustrated the advantage of the new dwarf, straight headed, variety from a harvesting standpoint over the taller more irregular Egyptian corn varieties previously grown."

The Reschke Machine Company demonstrated a header attached to a wagon. This is a product of the big kafir, milo and sorghum areas of the Southwest.

The Ventura Implement and Manufacturing Company successfully demonstrated two special California headers attached to wagons—one, one row and one, three row header. These machines are made to gather up down heads, heads standing, uneven heads, etc., cut them off and elevate to wagon bed.

The implement manufacturers giving attention to the harvesting have made splendid progress, indicating that the demand for machinery to harvest kafir heads on both small and large acreages will be supplied.

Among the machines used at the demonstration were an International Harvester Co. push header, cutting four rows at a time. The machine performed splendidly, getting practically all of the heads and demonstrating its adaptability on large acreages. A successful demonstration was also made by a John Deere harvester.

---

## WINTER GARDEN PEAS

If one lives in a section where very light frosts only occur he may grow winter peas, but they are distinctly an upland crop during the cold months. No better sort is known than the Telephone, and they should be planted at once.

It is better to plant them in a soil that has been plowed or spaded deeply, a foot is not too much, and plant one inch deep in wet soil. A little dry soil may be lightly sprinkled on top to keep surface from baking. Do not water after planting until plants are up, for peas rot very quickly at this time of the year. The seeds are better planted one inch deep at the bottom of a trench four to six inches deep so soil may be filled in after plants are several inches high, on the installment plan, a little each week.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Chick Mash

Can you give me a good mash mixture for growing chicks?—Subscriber, Pomona.

Excellent growing mashes are prepared by the various feed and milling companies, and most poultrymen prefer these because they are mixed by experts and are less trouble than the home mixed mashes. If you prefer to mix your own there is nothing simpler than the Cornell mash, which consists of equal parts by weight of bran, corn meal, middlings and beef scrap, with about 5 per cent of bone meal added.

### Caponizing Instruments

Where may caponizing instruments be obtained?—Subscriber, Pomona.

They may be obtained at poultry supply houses advertised in the Cultivator.

### Sticktights

Our chickens are troubled with small black bugs that stick their heads into the flesh. Will blue ointment kill them?—Subscriber, Porterville.

Those bugs are sticktight fleas, and the safest treatment for them is carbolated vaseline. You may have to make several applications but in the end it kills every one. Blue ointment is poisonous and can not safely be used where the bird can reach it with her beak.

### Electric Brooders

I have ordered 500 chicks for January and am thinking of buying an electric brooder. What do they cost, and are they more expensive to run than other kinds?—Subscriber, Pasadena.

A 600 chick electric brooder costs from $20 to $25. As long as kerosene is cheaper than electricity I suppose it will cost a little more to operate an electric brooder but it can be used in any kind of building. If your brooder house faces south and is mostly glass on that side, you will be surprised to see how soon you can begin to shut off the heat during the day.

### Unsatisfactory Pullets.

My 300 pullets have sore eyes and colds in the head. They also have lice and are laying only 20 eggs per day. I use potassium permanganate in the drinking water and spray the coops once a week with sheep dip and kerosene.—Beginner, Long Beach.

To get rid of lice you should dust the pullets occasionally with a good prepared louse powder and see that they have somewhere in their yard a dust hole where they can wallow and help to clean themselves. The way to make such a dust bath is to spade and pulverize the soil then keep it a little damp by hosing daily. Most Leghors will keep themselves clean if they have a chance to dust. Something is wrong with your housing if the birds have colds and roup. You say your coops are well ventilated, but are you sure the birds have sufficient room? Overcrowding is one of the most common causes of roup. The birds are overheated on the roost and then are chilled when they come out into the chilly morning air. Fresh air and cleanliness are preventives and cure, but you may help things along by dipping the heads of the birds in a potassium permanganate solution if there is considerable discharge from the nostril. For the sore eyes, wash twice a day with a boric acid solution made by dissolving ½ teaspoon of boric acid in a cup of warm water. You will get more eggs if you improve your feeding methods. Keep the mash before the birds all day in hoppers. Feed sprouted oats or barley in the morning, what they will clean up in ten minutes, cut alfalfa, kale or barley about 10 o'clock, mash moistened with sour milk or semi-solid buttermilk and water at 2 o'clock, and all the scratch they will eat at night, with a little left for early morning. I have my doubts about grass as the only green feed. It may do if it is cut fine in a clover cutter, but either alfalfa, barley or kale is better.

### Cure for Blackhead

Mrs. W. H. Monroe of Burbank has found this treatment successful with blackhead in young turkeys: As soon as the bird begins to droop she gives two tablespoons of olive oil. This is given in the morning. The next morning, if the bird will not eat, she mixes one-third teaspoon each of red pepper and charcoal, a cup of clabbered milk sufficient dry toast or corn bread to thicken the mixture, and forcibly feeds it three or four times daily, about a tablespoon at a time. For baby turkeys the dose is 1 tablespoon oil and a proportionate quantity of the feed.

### Culling Reds

How should R. I. Red pullets be culled for color and production?—Subscriber, Oakdale.

To cull for color follow as nearly as you think advisable the Standard of Perfection, which is for females: Head, brilliant red. Beak, reddish horn. Eyes, reddish bay. Comb, face, wattles, earlobes, bright red. Neck, rich red with slight ticking of black on tips of lowest feathers except in front. Wings, a rich red when folded; primaries red above, black underneath with narrow edging of red. Back, rich red. Two top feathers may be edged with red. Breast, rich red. Body, fluff and undercolor, red. The best way to familiarize yourself with the color requirements for Reds is to attend a few shows and study carefully the color of the winning birds. To cull for production, go through the flock at night and remove all whose combs and pelvic bones show that they are not laying. This should not be done till about 75 per cent of the birds are laying—as hens that are laying will have pliable pelvic bones with room between them to insert at least two fingers, red combs and a good distance between keel and pelvic bones, you will find it easy to distinguish the non-layers. Do not be in a hurry to send them to market, but keep by themselves a few weeks and check your own ability to select by their actual performance.

### Blue Bugs

How can I get rid of blue bugs on birds and old buildings?—Subscriber, Oakdale.

By blue bug I take it you mean the tick which is the bedbug of the poultry yard. A subscriber recently reported his success in ridding an old hen house of these pests by means of crude oil. I think he added crude carbolic acid to the crude oil and sprayed or painted several times. A mixture of kerosene and crude carbolic acid, 1 part acid to 10 of kerosene, ought to do the work if the crude carbolic is of full strength, but it takes repeated applications. I know of no

**Nu-Way STRECH SUSPENDERS**
A full year's wear or more guaranteed (75c and 50c), Men's Garters (50c) and Hose Supporters (all sizes, 25c). No rubber to rot from heat or sweat. Phosphor Bronze Rustless Springs give the stretch.

sure way to kill ticks on the bodies of the hens but by greasing. Possibly buhach powder or tobacco dust will kill them if used very freely.

### May be Cholera

I am losing one or two R. I. Red hens daily. Their droppings are yellowish white. Feed regular egg mash in hoppers during the day, cracked corn, wheat and barley at night—Subscriber, Compton.

You do not mention green feed. Its absence might account for intestinal disturbance, but those yellowish droppings looks like cholera which is becoming more and more prevalent in California. You would do well to disinfect houses and feed troughs thoroughly and keep hydrochloric acid in the drinking water, a teaspoon of acid to a quart of water. Kill and cremate all sick birds.

### High Flyers

Our White Leghorn pullets persist in flying over an 8 foot fence, though it turns in at the top. We have never cut their wings because we are told that to cut the wing of a White Leghorn is sure to throw her into a molt. Is this true? If so, how can we keep them in?—Subscriber, Bakersfield.

I am afraid you will have to cover at least a part of the yard with wire. Try running a 3 foot strip of chicken wire around inside the fence. A hen rarely flies straight up. I have seen turkeys kept in by a 1 foot fence with two or three single wires stretched across the yard. I never heard before that wing cutting induced a molt, but I do know that some poultrymen cut the wings at the first joint when their chicks are a few days old and that the practice of clipping wings of full grown birds is not followed to any extent.

### Leghorn Magazine

Is there any magazine published exclusively for the White Leghorn or the Leghorn family?—Subscriber, Bakersfield.

The Leghorn World, published at Waverly, Iowa.

### Stiff Legs

Several weeks ago one of my hens became stiff in one leg, would rest the whole leg on the ground, walking with great difficulty. Today I notice a 5 months old bird doing the same thing. This one never had many feathers and many of my chicks hatched the first of May are stunted and featherless. Is this trouble communicable?—Subscriber, Alta Loma.

There may be no connection between the stunted condition of your May chicks and that of the hen. Faulty incubation, overheating in the brooder and lack of proper food might all produce stunted chicks. The lameness of the hen and chicken is symptomatic of tuberculosis, and of course it is possible, though not very likely, that tubercular breeding stock has weakened the young stock. If I were you I would kill every bird that develops lameness. There is no cure for tuberculosis but cleanliness and careful feeding may keep it from spreading.

### Balanced Ration

Here are two requests for balanced ration for laying hens. Mountain View subscriber wishes a balanced ration to use with skimmilk and corn and another to use without milk. A Santa Ana subscriber asks for a laying mash formula.

First let me say that no one need mix his own mash unless he prefers to do it. Commercial mashes are mixed by experts and are giving excellent results in the hands of hundreds of successful poultrymen. Neither is it necessary to have different formulas to use with milk and without. When milk is kept in pans before the hens a good part of the day a smaller proportion of beef scrap is needed in the mash, but the addition of bran to the mash will accomplish this dilution without other change. Some poultrymen add as much as 50 per cent bran to the commercial mash, but the exact amount of dilution required can only be determined by experimenting. As long as the droppings are dry and hard the proportion of meat in the mash is right. If the droppings become soft and brown like molasses there is too much meat, and bran should be added. If only a little milk is used no change need be made in the mash. Many poultrymen, in addition to keeping the dry commercial mash before their hens all day, moisten a small quantity of it with milk or water, preferably sour milk, and feed at noon or just before the birds go to roost. Corn should be part of every scratch mixture. For those who wish to mix their own mash nothing is better than the formula used at the California farm bureau egg laying contest at Santa Cruz. It consists of 240 pounds bran, 160 pounds middlings, 100 pounds each of corn meal and ground oats, 40 pounds each of soybean and linseed meal and 60 pounds each of fishscrap and meatscrap, with 2½ per cent of finely granulated charcoal and ½ per cent finely sifted salt. With this is used in the morning a scratch mixture of 80 pounds recleaned barley, 120 pounds whole wheat and 200 pounds cracked yellow corn, and in the evening 200 pounds sprouted barley and 200 pounds of the morning scratch mixture.

### STORRS EGG LAYING CONTEST

Sorrs, Connecticut, September 26, 1922.— Report for the week ending September 25. The best single individual hen in the contest to date is Barred Rock from Guelph, Ontario, with 272 eggs. The four leading pens in each of the principal breeds are as follows:

#### Plymouth Rocks

Harry G. Culver (Barred), 1969; W. H. B. Kent (Barred), 1913; Ontario Agricultural College, (Barred), 1832; Michigan Poultry Farm (Barred), 1777.

#### White Wyandottes

Frank P. Matteson, 2041; Woodbridge Orchards, 1943; Walter Bradbury, 1877; Clemens J. Dieman, 1705.

#### Rhode Island Reds

The Orchards, 1783; Charles D. Pierce, 1759; John Z. Labelle, 1740; Applecrest Farms, 1664.

#### White Leghorns

Hollywood Farm, 2044; Goshen Poultry Club, 1844; Rapp's Leghorn Farm, 1831; Andrew L. Ohr, 1801; Beck Egg Farm, 1801.

**Help your MOULTERS MOULT**

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

*Dr. Hess Poultry*

**PAN-A-CE-A**

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
50 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

*GUARANTEED*

# Herbicide Kills Weeds Cheaply, Effectively

**Satisfaction Guaranteed**

Destroys, absolutely, all pest weeds, noxious grasses, vines, shrubs, including Johnson, Bermuda, Morning Glory, Crab, Nut, Bronco, Water Grasses, Malva, Thistle, and all other noxious plants.

Herbicide is a triumph of modern science. It is a combination of chemicals, which, when sprayed on the foliage, permeates the entire sap system of the plant, and kills it root, branch, seeds and all. Inasmuch as the seeds, also, are killed, your next season's crop of weeds will be lighter and eventually you will banish them entirely.

Herbicide is extremely economical and easy to use. Does not require a professional sprayer. Far cheaper and more effective than hand labor with a hoe. To save freight we ship in concentrated form—one gallon makes ten gallons of spray. This is one of the reasons why Herbicide is a more economical spray to use.

Herbicide is tried, tested, proven. It cannot fail to remove noxious weeds in the cheapest and most effective manner known. Now is the time to kill them. Enrich your land by removing worthless weeds which sap the soil.

Write for prices, today.

Herbicide Chemical Laboratories,
1963-C Santee St., Los Angeles, Cal.

### LIVESTOCK

(Quotations furnished by Federal-State Livestock Market News Service, 1014 Pacific Finance Building, based on prices off cars at Los Angeles.)

Cattle: Market for virtually all grades of cattle continues firm and the scarcity of fat bullocks in California is evidenced by arrivals at Los Angeles packing houses of fat cattle from Utah, Nevada, Montana, Arizona and Texas. One packer late last week bought ten cars of corn fed cows on the Kansas City market, for shipment here.

Good fat steers sold around 7.75 to 8.00, delivered off cars here. Twelve loads of good Herefords from Marria, Texas, brought 7.90 here and some good 1000-pound Orange County, California, steers, brought 8.00 delivered here. A Los Angeles packer paid 7.00, f. o. b. ranch, for 6 cars of 1200 pound Fresno County bullocks. A string of 137 medium to good grass steers, averaging 974 pounds, brought 7.50, at a local feeding station. Local packers this week purchased a string of fat 1250 pound steers near Salt Lake at 6.90 and 4 cars of coarse 1200 pound bullocks in the same territory at 6.00, both deals f. o. b. ranch. Common light Arizona steers brought 6.00 to 6.75, delivered off cars here.

Good weighty cows brought 5.75 to 6.00 off cars here, and 5.00 to 5.25 at country points. Medium cows and lighter weights brought 4.25 to 4.75, f. o. b. ranch. There is some inquiry for bologna bulls at 2.50 to 3.50, delivered here.

A broad feeder demand exists and recent sales of California, Nevada, Montana and Utah feeder steers at 5.50 to 6.00 were made. Arizona feeders ranged from 5.00 to 5.50.

Calves: Good 150 to 200 pound dairy calves are in good demand at 7.75 to 8.00, delivered here. Heavy offerings are finding dull outlet and numerous sales of West Texas and Arizona 250 to 300 pound calves were made at 6.50 to 7.25, some as low as 6.00.

Hogs: With the bulk of locally slaughtered hogs coming from Texas and Oklahoma, the market for California offerings holds steady. Two cars of 180 pound Imperial Valley porkers brought $11.00, delivered off cars here, this being the top on native stock. Heavier weights and small lots are selling at the usual discounts, with heavy sows as low as 6.00. There is a good country demand for brood sows.

Sheep and Lambs: In sympathy with the recent slump in Eastern values fat lambs have declined slightly. Good and choice lambs this week brought 12.75 to 13.25, delivered here. Choice Utah lambs brought 11.50 f. o. b. ranch. Feeders are in active demand at prices almost equal to fat stock.

Breeding ewes are aso in good demand. A band of Kern County ewes sold to a Southern California buyer at 9.00 a head. —Nelson R. Crow, livestock market reporter.

### POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, October 10 by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

Potatoes: Demand and movement moderate, market steady. New Stock: Locals, best, sacked 1.35@1.65; mostly, 1.50@1.65; poorer, low as 1.00 cwt. Northerns: Rivers, 2@2.15 per cwt.; poorer, 1.75; Idaho Rurals and Cobblers, 1.50@1.65; Russets, 2.00@2.25 per cwt. Sweets: Locals, Nancy Halls, 2½@3½. Northerns: Nancy Halls, 3½@4 lb.

Onions: Demand and movement slow, market steady. Stocktons: Yellow and White, 2.00 per cwt. Locals: Whites, 75@85; Spanish, 85@1.00 per lug. Mexican and No. best, 6; poorer 5 lb.

### PRODUCE MARKET

Trading was fairly active yesterday with the demand moderate and supplies liberal. Apples, grapes, pears and potatoes are selling freely with no changes in price. The demand for watermelons is dull but casabas are moving freely. Citrus fruits are scarce and high, but the demand is light so that supplies will likely be adequate until the new crops are available. Cucumbers and squash are in lighter supply and prices have an upward tendency.

### VEGETABLES

These are the actual prices obtained between 7 and 8 o'clock, October 10, by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Artichokes: Doz., 1.35.

Beans: San Pedro: Kentucky Wonders, 7½@8; Limas, 5@6.

Bunched Vegetables: Per dozen bunches: Trunips, carrots, beets parsnips, 30. Parsley, onions and radishes, 15; spinach, 25.

Cabbage: Market steady, quality generally good. Field cr., best mostly, 2.75@3.00.

Cauliflower: Per doz., 1.25; large sizes, 1.50@1.75.

Cucumbers: Local, lug, 1.50@1.75; few, 2.00 lug; Pickling, 2.75@3.25.

Celery: Movement moderate, market dull. Wide range in quality and prices. Locals, best, 3.00; poorer, 2.50@2.75.

Corn: Green, local, best, lug, 60@90.

Eggplant: Local, 2½ lb.

Lettuce: Market steady. Locals: Ordinary, leafy, 80@1.00 cr.; Northern, 4.50@4.75 cr.

Okra: Lb., best, small, 10@12.

Peas: Best, Northern, lb., few best, 12@14; poorer, 8@9.

Peppers: Locals: Bells mostly, 3@3½; Chilis, 3@3½ lb.; Cherry and Floral Gem, 10; Pimentos, 5@6.

Squash: Market steady. Locals: Summer, lugs, 50@65; Italian, lugs, 70@80; cream, 65@75 lug; Hubbard, 2 lb. cream, 65 lug; Hubbard, 2 lb.

Tomatoes: Demand moderate, movement slow, market dull. San Pedro: Lugs, best pink, 75; ripe, 40@60.

### FRESH FRUIT

These are actual prices obtained October 10 by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc., as compiled by the U. S. Bureau of Markets. Terms, cash on the walk.

Apples: Demand and movement moderate, market steady. Northerns: Bellefleurs, fancy 3½@4; tier, 1@1.10; loose, 2 lb. Locals: loose, King Davids and Jonathans, 3@4; Delicious, 5@6 lb. Utah: Jonathans, loose, 4 lb. Washingtons: Jonathans packed, extra fancy, 2.50; fancy, 2.25 per box.

Grapes: Demand slow, market steady. Northerns and Locals: Muscats, 3½@4; Malagas, 4@4½; Black Hamburg and Rose of Peru, 5; Black Prince and Zinfandels, 6; Tokays and Cornichons, 5; Black Morocco and Mission, 6@7.

Peaches: Market steady. Locals and Northerns: Freestone and Clings, all varieties, best 3; poorer, 2 lb.

Pears: Demand good, market firm. Northerns and Locals: Bartletts, mostly 5½@6; ripe, 3½@5.

Persimmons: Lb., 10.

Pomegranates: Lb., 6@8.

Plums and Prunes: Demand and movement moderate, market steady. Per lb.: Locals, 3@4, according to variety and quality. Northerns: 3@4 lb.

Watermelons: Demand moderate, market dull. Locals: Klondikes, medium size, 1.00@1.25 cwt.; smaller, mostly, mostly 1.50; casabas, mostly 1.50@1.75 cwt.

### CITRUS FRUIT

Grapefruits: Market steady. Locals: packed box, fancy, 9.00@10.00; small sizes, 7.00@8.50 according to size and quality.

Lemons: Demand and movement light, market steady. Special brands, fancy, 8@9; choice, 6.50@7.50.

Oranges: Demand moderate, market steady. Valencias, special brands, $10@11 according to size.

### HONEY

Much honey still in hands of beekeepers, many of whom are holding for higher prices especially on orange. Colonies in good condition for winter. Carlot demand light, movement limited, market generally steady. Firmer feeling on lower grades account recent tariff increases. Carlots f. o .b. usual terms. Extracted: per pound, White Orange, 9@9½; White Sage, 8¼@8½; Light Amber Sage, 6½@7; Light Amber Alfalfa, 6¼@6½.

Beeswax: Cash to beekeepers mostly, 20 per lb.

Comb: Carlot sales Inyo County stock reported at 2.70 per case to growers.

### WALNUTS

Prices named by the California Walnut Growers Association on last Tuesday are: No. 1, 22½; No. 2, 17½, and fancy budded, 26. Last year's closing price for No. 1 was 27. The market opened at 24½, but only stood at that point for a day, strengthening immediately and moving up to 27.

### BEANS

California Lima Bean Growers Association, October 7:

The market on Limas and Baby Lima beans improved past week. Shipping price on choice recleaned Baby Limas strong at $6.75 f. o. b. cars, $7 almost certain.

This is due to realization that Baby Limas are in smaller supply than last year, and that certain coast dealers have "shorts" to fill. Regular Limas have stiffened and California Lima Bean Growers Association is daily booking sales orders on basis of $6.45 f. o. b. cars choice recleaned and $6.65 Seaside packed in bags with usual higher differential on deliveries to docks and for Seaside packed in cartons. It now appears that efforts by speculative interests to break prices have failed. The association is for the present confining sales to wholesale trade. Favorable weather permits threshing and delivery free from rain damage which will allow shipment of better quality without expensive handpicking.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Prices quoted f. o. b. L. A. to producers:

| | |
|---|---|
| Tame Oat | 20.00@22.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 8.00@10.00 |
| Barley Straw | 7.00@ 9.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around $22 as a fair average. No. 1 dairy is varying from $15 to $17 with $16 as a mean or average price. Standard alfalfa is not much in evidence. Few offer it; fewer want to buy. If sold it brings from $10 up.

### GRAIN

L. A. Grain Exchange prices:

Barley: October delivery, 100 ton lots, 1.45.

Milo: December delivery, 100 ton lots, 1.75.

# San Francisco Markets

San Francisco, October 10, 1922.

### HONEY

Northern California: Up to September 1 only half crop of Star thistle had been gathered, but with warmer weather, honey has continued to come in during the month. Carlot offers made of 7½ per pound f. o. b. shipping points for Star thistle but beekeepers holding for higher prices. Few sales reported at 8@9. Hawaiian imports have been heavy during September. Demand and movement good. Quotations, White, 6½ per lb.; Light Amber, 5½@5¾; Amber, 5, f. o. b. San Francisco.

### BEANS

California Bean Growers Association selling prices, 100 pounds, for choice recleaned California beans (1922 crop) in carloads, f. o. b. California common shipping points on October 9, 1922:

| | |
|---|---|
| Large Whites | 5.25 |
| Small Whites | 5.25 |
| Pinks | 5.00 |
| Mexican Reds | 4.75 |
| Red Kidney | 6.25 |
| Bayos | 5.25 |
| Henderson Bush Limas | 7.00 |
| Cranberry | 5.75 |
| Blackeye | 5.10 |

### HAY AND FEEDSTUFF

Under date of October 6, A. W. Scott Co. says:

Receipts past week 741 as compared with 752 previous week.

Light arrivals with addition of warehousing expense have caused a firmer feeling in the local market and slight advance of prices on all qualities of hay. The unsettled weather has interferred somewhat with deliveries and this has had an effect of strengthening the general feeling. Export and coast shipments have been light and steady. Interior trading continues light. Alfalfa has been doing proportionately better. Appearances are for steady demand through the winter.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added according to conditions.)

| | Ton |
|---|---|
| Wheat Hay, No. 1 | 16.00@19.00 |
| Wheat Hay, Fair Grade | 14.00@16.00 |
| Tame Oat Hay | 16.00@19.00 |
| Wild Oat and Barley | 13.00@15.00 |
| Alfalfa Hay | 16.00@19.00 |
| Stock Hay | 11.00@13.00 |

### GRAIN

Prices S. F. Grain Exchange, October 9, f. o. b. S. F. warehouse and storage charges paid.

Wheat: Mill, 1.90-1.95; feed, 1.80.

Barley Feed, 1.30@1.37½; shipping 1.40@1.50.

Oats: 1.60@1.85.

Corn: Colored Milo, 1.80@1.95; No. 2, bulk, 1.80@1.85; No. 2 Eastern Yellow, 1.60@1.62.

## Citrus Markets

Los Angeles, October 11, 1922.

Shortage of refrigerator cars is slowing shipments. Movement will continue moderate, but the limited supply of Valencias left will safely be moved before Navels fill the market. Prices are hardly as high as auction reports show. The lemon market is still strong, with supply very low.

**Shipments**

Shipment of citrus fruits to date since November 1, 1921. Southern California: Oranges, 23,037 cars; lemons, 9,585; total, 32,622. To same date last season: Oranges, 39,507; lemons, 11,184; total, 50,691. From Central California to date this season: Oranges, 5,111; lemons, 106; total, 5,217. To same date last season: Oranges, 6,650 cars; lemons, 212; total 6,862. From Northern California to date: Oranges, 373 cars; lemons, 10; total, 383. To same date last season: Oranges, 305; lemons, 5; total, 310.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

Any error herein is unintentional and subject to correction the following week. This summary is assembled from the best sources obtainable, and both producers and packers can assist by reporting actual sales or buys, giving names, dates and facts, and we will, if requested, withhold names. All we want is fact and a fair deal and correct information for the producers. Address A. L. Spellmeyer, care California Cultivator, 317 Central Avenue, Los Angeles. The Cultivator reaches over 40,000 producing farmers and livestock men.

The whole cattle trade is different from what it used to be in these parts. Operation on verbal word was a fact 20 or even 10 years ago. Operation on word with a little writing was the custom five years ago. Today you can't take any word, and if you want it rock bound the amount of cash forfeit will state the degree it is effective or not. It is a matter of great regret that modern business habits and ethics have at last invaded the western cattle trade, for you can't trade now without bonds and lawyers, if you trade safe. It is indeed a change with 14.75 feeder lambs at some markets and $9 per head f. o. b. ranch lambs, from that period one year ago when one could not sell a lamb for more than $2 nor a good breeding ewe for over $1.50 right near Los Angeles.

It will be a change when we see the $25 cow again selling for $75 to $90, and this is as sure and inevitable as was the change in the price of lambs and oranges. The low cattle prices and drouth have been forcing to a certainty a beef shortage, and though it is almost here men are not buying the bargain stock cattle that are offered. Does any sane man acknowledge that a cow that costs $60 or more in actual expense to mature and three or more years of time isn't worth more than three baby lambs that cost under $12 to raise and under 8 months, and a tenth of the investment? Cattle will do what lambs have done, what oranges are doing. Not only that but other products from eggs now at 60 cents to turkeys at prospective 75 cent prices are doing the same thing, and the farmer is gradually coming into a state where in some articles the price is what he cares to demand.

Beef shows around the 7.50 mark for steers. Cows are offered in the country at 4 cents for grass fat and 3 for feeders. Feeder steers are around the 5.50 mark in Arizona, for good cattle. Fred Colter and Springerville district have 5000 cattle to sell and ship next month. Ed Sawyer of Winslow just sold a load of lambs that beat the 70 pound mark and went without cut at $7.35 per head f. o. b. ranch.

### CELERY, ONCE A NOVELTY

From a crop that was a novelty and served on the tables of only a few people to an industry that has produced as many as 17,000,000 crates in a year has been the development of celery production within the memory of many people now living. With the rapid increase in the growing of the crop methods of culture and marketing have materially changed, new diseases and pests have appeared, and a number of problems have arisen. Because of these new problems and difficulties the United States department of agriculture, Washington, D. C., has just issued Farmers' Bulletin 1269 "Celery Growing," by W. R. Beattie, in which are discussed the fundamentals of successful production, including the best methods of growing and handling the crop.

The crop can be grown on almost any type of soil if enough plant food is present and water is supplied during the dry periods, but most of the successful celery growing enterprises are on low lying muck, or "hammock" soils. Under present day conditions it is not practicable to depend entirely on manure as a fertilizer and large quantities of commercial fertilizer are used, growers in the northeastern part of the country using from 1,400 to 1,800 pounds of high grade plant food to the acre. Florida growers sometimes use as much as 3 tons to the acre. But not all of the discussion is devoted to the commercial growing of celery. There is a chapter on producing the crop in the home garden, and many of the practices that have been developed are applicable no mattter on what scale it is grown.

### COST OF POTATO CROP

Potato growers and contemplative growers do not always know just what it will cost to plant and care for an acre. One could not, of course, make a fixed schedule that would do for all sections, conditions or practices. But Bert C. Bougher, superintendent of the Pasadena city farms, has studied the fields under his charge very carefully and has compiled the following schedule of costs of the many necessary operations. The cost is per acre:

Furrowing out after digging, $. 75; cover crop seed, 260 pounds at 8 cents, $1.60; labor on seeding, .30; labor and cost of water for three irrigations, water one cent an inch per hour, $3.60; plowing under cover crop, $5; disking twice. $2; furrowing out after disking, .75; water and labor for one irrigation, $1.20; seed, 100 pounds per acre at 3½ cents, $35; planting, $1.50; harrowing after planting, .75; cultivating six times at $1, $6; furrowing three times for irrigation at 60 cents, $1.80; digging, $2.75; grading, sorting and hauling from field, $10; sacks, 100 at 8 cents, $8; hauling to shipping point, $3; depreciation on implements, mules and equipment, $10; total, $92. For certification the following costs must be added: Certification, $1 an acre per visit, 5 cents per sack for tag, $8; roguing and weeding, $3.50; total $103.50 The following costs should be added but are generally omitted: Interest on an acre of land valued at $600, at 7%, $42; taxes, $20; grand total, $165.50.

Plant alfalfa; it feeds your soil with nitrogen, your cattle and hogs with protein, and your heart with contentment.

### KILLS STRIPED CUCUMBER BEETLE

Nicotine sulphate, when applied in a mixture with a dust, protects young cucumbers, melons, and related crops from the striped cucumber beetle. A dust mixture containing 4 per cent nicotine proved as effective as those containing greater amounts. One-fourth to one-half an ounce to the hill is effective for one application. The dust acts as a repellent and also kills the beetles when they come in contact with it. When applied properly it drives the insects from the cracks in the soil at the base of the plants, and so prevents serious injury.

A duster that will throw a good volume of dust quickly and forcibly to prevent the beetle from escaping by flight should be used. A cheesecloth sack or knapsack bellows type of duster is effective on small areas. The dust may be applied as soon as the plants appear above the ground so that they are well covered. The insect makes its appearance suddenly and in large numbers and serious damage may result if this application is neglected. The number of applications will depend on the abundance of the beetles and on weather conditions.

### APRICOT PASTE MADE INTO JAM

The ancient Damascus oasis of Syria still bears abundantly and now modern commercial methods are employed in cultivating the fruit trees, which have been blooming there for centuries. Apricots constitute the most important fruit crop, Consul Charles E. Allen at Damascus informs the department of commerce. The fruit is marketed in four forms: fresh, sold locally; apricot paste; dried apricots; apricot nuts or seeds. Apricot paste is prepared by mashing the fruit to a pulp, straining out the seeds and sundrying the resultant product on a board until it becomes hard. It then resembles a large sheet of leather and is of sufficient pliability to permit of its being rolled. English and German jam manufacturers are eager to purchase this paste. A cooking oil is pressed from the apricot kernels.

Hogs roughly handled get their revenge after death. Bruises and dislocations of carcasses, it is estimated, reduce the value of 15 per cent of the hogs that come to the Chicago stockyards.

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST, 1912,** of California Cultivator, published weekly at Los Angeles, Cal., for October 1, 1922.

STATE OF CALIFORNIA,
County of Los Angeles, ss.

Before me, a Notary Public in and for the State and County aforesaid, personally appeared Frank J. Ironmonger, who having been duly sworn according to law, deposes and says that he is the publisher and business manager of the California Cultivator and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

| NAME OF— | POSTOFFICE ADDRESS |
|---|---|
| Publisher, Cultivator Publishing Co., | Los Angeles, Cal. |
| Editor, C. B. Messenger, | Los Angeles, Cal. |
| Managing Editor, | None |
| Bus. Mgr., Frank J. Ironmonger, | Los Angeles, Cal. |

2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding one per cent or more of the total amount of stock):

| | |
|---|---|
| Cultivator Publishing Co., | Los Angeles, Cal. |
| Frank J. Ironmonger, Hollywood, | Los Angeles, Cal. |
| J. H. Yetter, | Los Angeles, Cal. |
| W. R. Wood, | San Dimas, Cal. |

3. That the known bondholders, mortgagees, and other security holders owning or holding one per cent or more of the total amount of bonds, mortgages, or other securities are: (If there are none, so state). None.

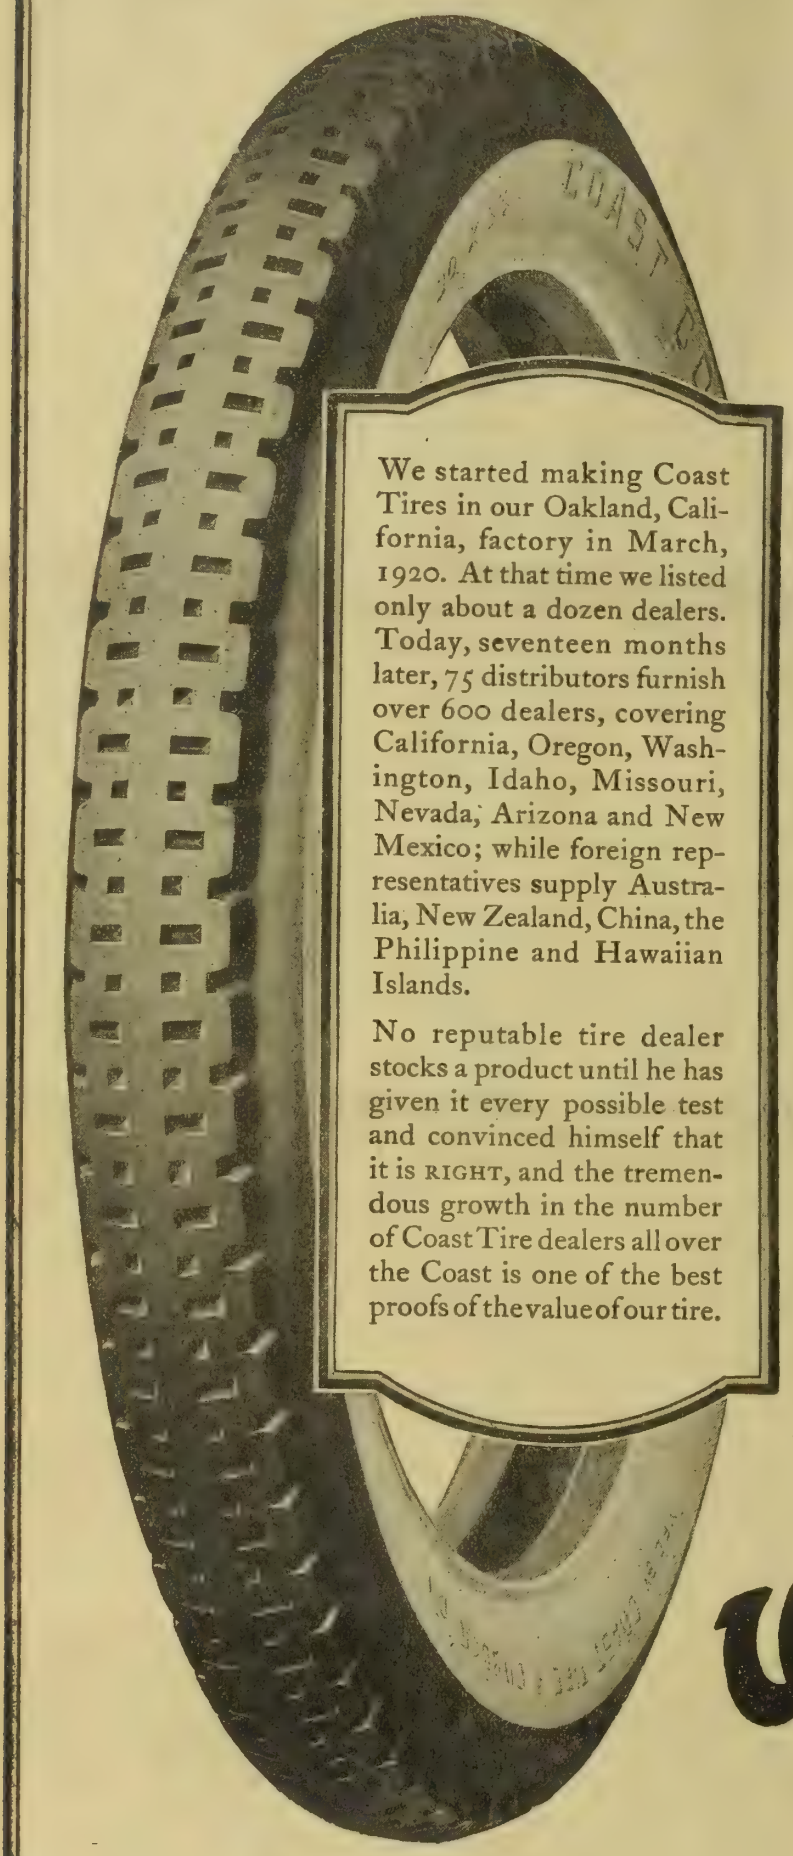
4. That the paragraphs next above, giving names of owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholders or security holders appear upon the books of the company as trustees or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is ———. (This information is required from daily publications only.)

FRANK J. IRONMONGER, President and Manager

Sworn to and subscribed before me this 30th day of September, 1922.

(SEAL) ROBERT WHITFIELD.
Notary Public in and for Los Angeles County, Cal.
(My commission expires April 4, 1923.)



We started making Coast Tires in our Oakland, California, factory in March, 1920. At that time we listed only about a dozen dealers. Today, seventeen months later, 75 distributors furnish over 600 dealers, covering California, Oregon, Washington, Idaho, Missouri, Nevada, Arizona and New Mexico; while foreign representatives supply Australia, New Zealand, China, the Philippine and Hawaiian Islands.

No reputable tire dealer stocks a product until he has given it every possible test and convinced himself that it is RIGHT, and the tremendous growth in the number of Coast Tire dealers all over the Coast is one of the best proofs of the value of our tire.

*Try this method of demonstrating the quality of*

# COAST TIRES

Put just one Coast Tire on your car and test it against any other tires on the market. Put it where it will have the hardest kind of wear. Treat it as rough as your car will stand; use it as though it were a special "demonstration" tire. Then, when you realize the mileage it gives you; the non-skid quality of the tread, and the real service and durability of the tire, you will understand why we call them

## Wear Defiers

*If it is not convenient for you to visit one of our dealers, write us and we will send you prices and complete literature.*

Hundreds of people have made this test and have become enthusiastic COAST TIRE users and boosters.

# *Keep California Free*

## *from Political Control of Industry*

We represent many owners of real property in California. The tax burden on real property, which falls ultimately on tenants as well, and the tax burden on public utilities, which falls ultimately on rate payers, have become oppressive.

The great bulk of our California taxes are laid upon us by popular votes and not by the local and state legislative authorities. The people are too prone to vote for bonds and other expenses without calculating the cost to themselves in taxes. When they get the tax bill, they groan and wonder who saddled them with such burdens.

## *from Enormous Debt*

State Controller Ray L. Riley in his 1921 report, recently published, says:

"During the past decade the total bonded indebtedness *for all forms of government* in California has increased from $93,906,423 to $321,616,238.66, or 242 per cent, while the wealth of the State has increased about 60 per cent. This tremendous increase that aggregates more than 3 per cent of the total wealth of the State should have the attention of all tax-levying bodies. California's credit must not be jeopardized by over-financing and the same ratio of increase during the next ten years would impose confiscating tax burdens upon the people."

"During the past year the total amount expended for interest and redemption of debt was $27,559,297. To produce this amount it would require a tax rate of 56 cents on every $100 of assessed valuation."

## *from Destructive Taxes*

*In face of that warning,* a proposed constitutional amendment has been put on your ballot to be voted on November 7th which creates a powerful new commission, called the Water and Power Board, and authorizes it, *without further reference to the people or the legislature,* to issue state bonds to the enormous amount of half a billion dollars. That bond issue will multiply the *state's* debt more than *six* times. The board is authorized to invest the money in water and power speculations and "to do *any* and *all* things *necessary* or *convenient* for the conservation, development, storage and distribution of water, and the generation, transmission and distribution of electric energy." It is authorized also "to purchase, acquire, produce, manufacture or otherwise provide facilities, materials and supplies, raw or finished, *and any property or thing necessary or convenient* to the accomplishment of the purposes of this article."

The board is authorized *to fix its own* rates, which need not be uniform, so that particular *localities* or *industries* could be favored. The proposed amendment makes an appointive board, sitting at Sacramento, the arbitrary masters of the credit and the industry of the State of California. The amendment even authorizes the board to appoint and fix the compensation of such employes as it may require and *exempts the board from the state civil service.*

This is bureaucracy in its completest form. We have had sufficient experience with government by bureaus to know that we don't want any more. California, prosperous as it is, cannot stand the proposed addition to the state debt and the proposed arbitrary control of industry by a board of politicians. Give a political board unrestricted authority to hire employes and fix their compensation, and give them 500 million dollars of taxpayers' money to play with, and in a year you will see *the biggest political machine* and the *biggest tax bills* that any state has ever had.

*Vote* NO *on number* 19 *on your ballot November 7th*

**CALIFORNIA REAL ESTATE ASSOCIATION**

*By* **C. C. C. TATUM,** ***President***

# Light and Power from the Hills

By C. B. Messenger

THE time was when some of us who are yet young attended annual conventions of fruit growers and others of California when it was in order to present resolutions favoring construction of a canal which should unite the Atlantic and the Pacific somewhere between the two Americas. We in California favored the route of Nicaragua. It was longer than that of the Panama but there was much less of cut and it was asserted it could be built at tidewater and without locks, besides the cost of the Panama Canal might reach the enormous total of a hundred million dollars. But regardless of repeated "resolutions" neither Panama nor Nicaragua routes received much effective promotion from the powers that were. When Theodore Roosevelt became president of the United States action began at Panama and the prediction of Californians that the cost of that waterway would exceed a hundred million dollars was realized. But the canal was built and the commerce of the world has been carried through it for nearly a decade.

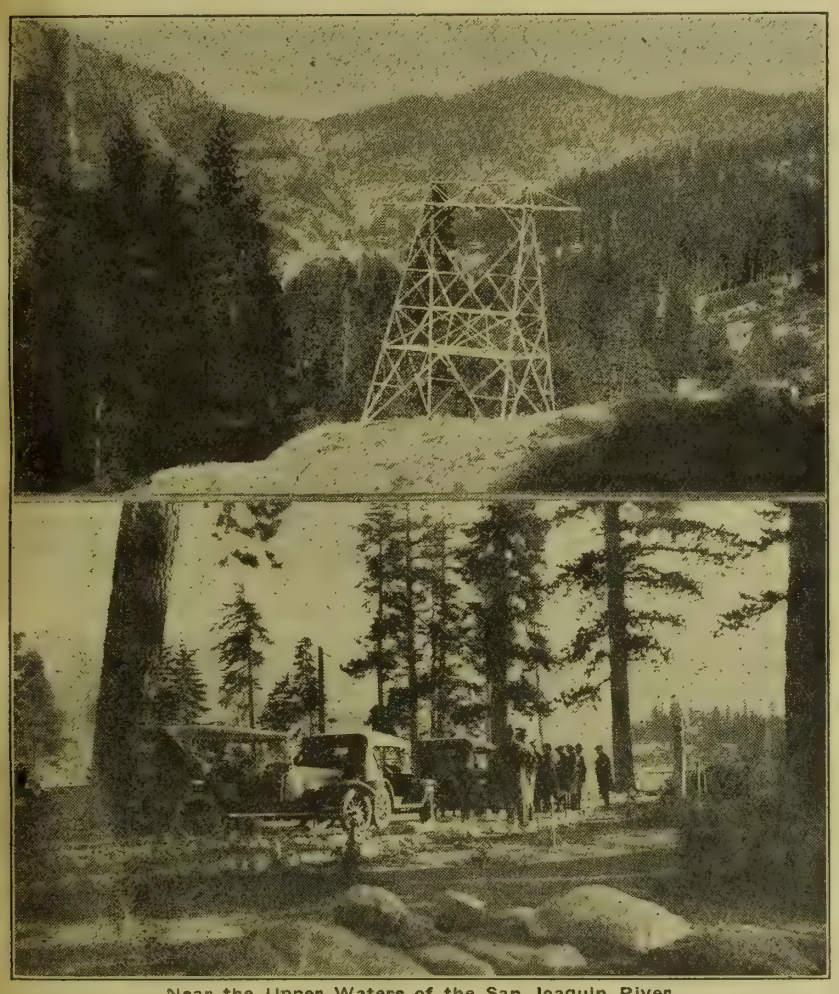
It was the fulfillment of a dream and has resulted in wonderful developments on the Pacific Coast, until today, we, in California, are dreaming of accomplishments infinitely greater than the construction of the Panama Canal. We are dreaming—and bringing to fulfillment as we dream—of storing the floods which have since time began been tearing down the mountains and opening great gashes through the valleys—of turning those floods into warmth and light and heat and to pump other waters onto rich mesa lands to produce more food for more people.

Only the other day I saw some of this work in the doing. Great bores through solid granite are being made of such size as to permit diversion of rivers from their former channels and turn them through penstocks down nearly vertical declivities more than a third of a mile in height and change them into electrical force, then deliver the waters to the rich lands of the valleys without impairment.

But while some make dreams come true with the use of dynamite, steel and concrete, other dreamers are at work looking for other opportunities to increase human comfort.

It is costing millions? Yes, hundreds of millions, even billions. The people are not discouraged nor astounded at the great cost but take it as a matter of fact that the forces of nature must be brought into service that the comforts of mankind may be increased.

One great corporation alone stands ready to undertake at least one billion dollars worth in this great scheme of development. Even today it has in hand work in the Sierra Nevada which involves the expenditure of 375 millions of dollars. This is on the headwaters of the San Joaquin River, the principal portion of which is known as the Big Creek development. The Big Creek is a tributary of the San Joaquin River. There will be eight power houses constructed in this one system. Number eight is now under construction at the junction of the San Joaquin River and Big Creek. Numbers 4, 5, 6 and 7 are yet to be constructed.



Near the Upper Waters of the San Joaquin River

The upper picture shows, up near the skyline and a bit to the left of center, the Big Dome. Almost at the base of that big rock Power House Number 1 is located where a drop of 2,200 feet makes possible the generation of 42,900 horsepower. Note at the bottom of the three insulator lines aluminum "shield rings." These rings are to prevent the loss from high voltage current in transmission. This loss causes a visible glow or "corona" and these rings equalize the current and prevent the formation of an arc. The lower picture shows the Edison party (Huntington Lake in the background) ready for early morning start around the lake and up into the high Sierra not far from the perpetual snows of Mount Lyell and into the tunnel which is to be 13 miles in length, the longest in the world.

In the High Sierra Where Water is Saved and Light and Power are Made

The white building is Power House Number 2 of the Southern California Edison Company's Big Creek system. The penstocks rise on the mountains behind this building almost 2,000 feet. This is the jumbo of the power houses on this system for it is generating 64,300 horsepower. The photo on the right shows the various leaps of the stream at Stevenson Creek Falls. The three cascades near the bottom of the photo are only a small portion of the total drop as may be seen by the upper fall which is shown away up almost to the skyline a bit to the right of the center. At the extreme lower left is shown only the margin of one of the entrances to the six mile tunnel with the Edison party making inspection.

The Big Creek system gives opportunity for the use of the same water in five different power houses. House No. 1 takes the waters from Huntington Lake at an altitude of 7,000 feet, drops it through a penstock with a fall of 2,200 feet, generating 32,000 kwh. These waters are picked up immediately, carried around and through the hills and dropped nearly another 2,000 feet to power house No. 2 where another 48,000 kwh. is developed. Then on to No. 8 with its 800 foot drop, then through six miles of solid granite to No. 3 where the increased amount of water picked up in its trip down the mountains increases its capacity so that the 800 foot drop results in the power of 75,000 horses. At No. 4 this one series will end in a drop of 450 feet. All told less than a dozen miles have been traversed by the water in this series of drops of 6000 feet or of a vertical length of over one mile.

Huntington Lake at an altitude of 7,000 feet impounds about 89,000 acre-feet. This lake is being drawn on at this time of the year for about 200 second-feet to increase the natural stream flow. This storage will be added to later by Florence Lake reservoir and Vermillion Valley reservoir, and to connect these up with Huntington Lake there is being constructed a 13 mile tunnel. The longest tunnel in the world at the present time is Mont Cenis tunnel in the French-Italian Alps which is seven and a half miles long or little more than half the length of the Edison tunnel.

Nor are these dimensions of magnitude confined to length. The tunnel which spills the water into the penstocks above power house No. 3 offers no opportunity for bumping one's head. The tunnel is of such diameter that one may not only walk upright but may stand on a large load of hay and drive it through the tunnel and still not require "Low Bridge" sign. The height of this tunnel is 22 feet in the clear and it is six miles long. Most of the way it is through solid granite and will require no concreting. It will be full of water and will be in a sense of forebay or subterranean storage chamber. At its lower end and built above the entrance to the penstock will be a surge chamber. It is expected that this surge chamber may prevent accidents similar to that which occurred in penstock No. 1.

Generating electricity to increase the comfort and efficiency of others, the Edison people believe in using it to increase their own efficiency, so the gate which admits the waters to the penstock some thousands of feet up the mountainside from power house No. 1 is electrically controlled by a button at the hand of the engineer in charge of the power house. Press the button, the motor up on the mountainside starts, the gate is closed, the big generator stops. At one time before all the engineering problems of hydro-electric development were solved the engineer in charge of the house found all was not well in the generator. It was necessary to immediately

(Continued on Page 435)

# Agricultural News Notes of the Pacific Coast

## Northern California

Sutter Basin fat lambs sold on the ranch last week at $11.

Southern Marin County shows spread of Argentine ant.

The Antioch water case it is said will again be brought before the courts.

Cattlemen report rains have started green feed in Cazadero section of Sonoma County.

Farm bureau meetings will be held in Glenn County at Westside, October 19; Grapevine, 20; Lake, 25.

Sheepmen of Siskiyou County met at Eureka, October 10, to form unit of the California Woolgrowers Association.

The Placer County farm bureau has elected E. E. Burnet of Mt. Pleasant, president, and Miss Maude Elkus, secretary.

Sutter County has harvested a $4,000,000 peach crop. 3800 cars were shipped to canneries in the San Francisco bay region.

Partially dried grapes and prunes caught by recent rains in Sutter County were shipped to evaporating plant at Modesto.

The Poultry Producers of Central California is proposing to build a fattening and packing plant to handle poultry of members.

Sutter County's bean crop is said to be averaging 15 sacks of all varieties to the acre. 13,000 acres are planted to beans in the county.

A large percentage of the potato crop of Marin County will be certified this season. Lack of moisture has resulted in smaller average size.

The Orland chamber of commerce has declared in favor of the addition of a new unit to the Orland project that will bring in 25,000 to 30,000 acres.

A public auction sale of state scrip will be held by Surveyor General W. S. Kingsbury, at the state capitol, Sacramento, Monday, November 6, 1922, at 10 a. m.

A meeting to consider the sheep scabies situation was held at Red Bluff, October 7 by wool growers of Colusa, Glenn, Butte, Shasta and Tehama Counties.

The California Rice Growers Association estimates rice acreage in California this year at 145,000 compared with 126,000 last year. Last season's crop is practically cleaned up.

Professors Ralph H. Smith and T. F. Hunt of the state university, have been investigating tree troubles in Sutter County. Farm Agent C. E. Sullivan has been working with them.

Navigation facilities of the upper Sacramento and of the Feather were discussed at a conference recently held at Sacramento, Major Grant of the California debris commission presiding.

The California Farm Bureau Federation has established the Heileman Memorial Fellowship at the state college of agriculture. Distribution and marketing of dairy products will be taken up January 16.

Rice crop now being harvested in Yuba and Sutter Counties will approximate in value $1,500,000. This is estimate of representative of the California Rice Growers on estimate based on average price of $1.75 paid for last season's crop.

## Central California

Visalia has decided not to hold a citrus fair this fall.

The Vandalis Citrus Club of Porterville made observation tour of Lindsay groves on October 3.

The new goat milk condensary at Salinas is making shipments to Eastern as well as California points.

Canned raisins in eight and twelve ounce tins are the latest according to announcement by the Sun-Maid Raisin Growers.

Monterey County supervisors have leased to vegetable growers 30 acres of bottom lands of the county hospital grounds.

The West San Joaquin Valley highway out of Tracy will follow the present route instead of the proposed direct line along the railroad.

Standiford in Stanislaus County has many bean threshers busy in the fields. Quality of the crop is generally very good, no damage from recent rains.

The horticultural commission of Tulare County has 18 grape inspectors at work and during the peak of the Emperor season will perhaps double its force.

The Oakdale and Southern San Joaquin irrigation districts will increase their applications for storage at Melones reservoir from 90,000 to 108,000 acre feet.

Farm home department meeting will be held in Kern County at Weed Patch, October 17; Inyokern, 19; Edison-Fairfax, 24; Kern Delta, 25; Wasco, 26; Delano, 27.

The Ceres district of Stanislaus County shipped an exceptionally large crop of peaches. Grapes and melons are going out slowly because of difficulty in securing cars.

Farm center meetings of Kern County farm bureau at Indian Wells Valley, October 20; Rosedale, 20; Muroc, 20; Shafter, 23; Arvin, 27; board of directors, 28.

The peach department of the Stanislaus County farm bureau has named October 26 as tentative date for Peach Day when prizes will be awarded in the peach growers contest.

The Lindsay plant of the California Olive Association has sold its entire crop for 1922 to the Grogan plant. Crop will amount to about 600 tons. Price for Missions, $125; Manzanillos, $92.50; oil, $45.

At the recent meeting of the California Olive Growers Association at Fresno Herman T. Miller of Lerdo, Kern County, was elected president and C. E. Weikert, secretary. The company will not process any olives until next season.

Regulations and prizes have been announced for the first annual Turlock Pork Day, to be held October 31. The Pork Day is being conducted jointly under auspices of the swine growers of Merced and Stanislaus County farm bureaus.

Ranchers of the Modesto district meeting October 9, have petitioned for recall of director charged with blocking distribution of Don Pedro power as voted by members of the district. Plans were laid to cooperate with other divisions in recalling directors charged with similar action.

## Southern California

Work has begun on the Palo Verde drainage system.

A new ice plant and cold storage house is being built at Victorville.

Hueneme, Ventura County, has already shipped 28,000 bags of beans.

Calexico is planning for a winter festival which will feature a cotton carnival.

The annual meeting of the Los Angeles County farm bureau will be held October 26.

Bee Inspector Hanson of San Diego says that that county has shipped 2,880,000 pounds of honey.

A cow testing association agreement is being circulated for signing by Imperial County dairymen.

Congressman Phil D. Swing expects to attend the Colorado River conference at Santa Fe, New Mexico, on November 9.

Date growers field day was held at El Centro, October 10. Visits were made to date gardens, including the government garden at Meloland.

Petitions for development of hydroelectric power from Whitewater River have been filed by the Southern Sierras and San Gorgonio Power Companies.

The Palo Verde Valley Creamery will build an ice storage plant at Blythe and will double its shipping sheds to handle the coming year's lettuce crop.

More than 130 citrus growers from Orange County visited the citrus experiment station at Riverside on October 6. Special attention was given to fertilizer plots.

Irrigation canals at Palo Verde, destroyed by spring floods, will be ready for use within another two months. A new settling basin is being built around the old river channel.

Supervisor Crain of San Bernardino County announces that he is working with the state highway commission to secure rights of way for highway from Victorville to Barstow

San Bernardino County supervisors have taken preliminary steps toward formation of water conservation district for Perris Valley. The proposed district will place 35,000 acres under irrigation.

The Chino Business Men's Club will hold the second annual Chino Community Fair on November 1, 2, 3 and 4, to exhibit products of ranchers on the famous old Rancho Santa Ana del Chino.

All bids for drainage work in Imperial Valley were rejected by the irrigation district board. Bids ranged from 15 to 20 cents and as the district has most of the equipment needed it figures it can do the work for at least half the bid price.

Citrus meetings of the Los Angeles County farm bureau will be held at Covina October 23; San Dimas and Charter Oak 30; La Verne, November 6; Claremont and North Pamona Centers, 13; Pomona, 20; Whittier, 27; Rivera, December 11.

At the recent drainage conference of the Los Angeles farm bureau the report of Deputy Surveyor Warren on the preliminary reconnaisance survey of the proposed drainage district was presented and unanimously approved. The county surveyor was requested to prepare petitions.

## The Coast and General

Much of the potato crop of Nebraska is reported undug because of lack of demand.

Date crop of Arizona unusually heavy and of fine quality owing to unusually hot weather.

India is the third largest producer of wheat, United States and Canada exceeding her production.

Salt River Valley of Arizona is having favorable weather for cotton picking, but hot weather has necessitated extra irrigations.

The Yakima Valley (Washington) Dairymen's Association with 125 members has pledged a fund of $20,000 to carry on for the next six months.

First of fall grain is up in Arizona, though most of the crop has not yet been seeded. Hot weather of September has seriously damaged alfalfa.

First sales of "Pima" long staple cotton grown in the Salt River Valley, Arizona, this season brought 32½ to 35 cents for No. 1 and No. 2 grades.

Large shipments of peaches are sent from the Niagara district of Ontario to Great Britain. This year for the first time fresh pears are being shipped to the same market.

Rebuilding of the Apache Trail, between Phoenix and Globe, has been completed except a unit of ten miles at Fish Creek. The entire road will be finished by the end of November.

Officials of the Arizona state fair have decided that this year in place of the usual midway with the objectionable fakers there will be an industrial show participated in by manufacturers and dealers.

It is estimated that about 75,000 sheep will be sent to the Gooding and Twin Falls sections from western Idaho. From Oregon it is expected that about 200,000 sheep will be brought into the Boise Vall y for the winter.

An extra train containing 39 double decked carloads of lambs went from Nampa, Idaho, to the Chicago markets recently. While this is an unusually large shipment, hundreds of carloads of lambs are going from southern Idaho points almost daily.

Fruit shipments from the Wenatchee district of Washington up to September 14 were 136 cars of cherries, 95 cars of apricots, 513 cars of mixed fruits, 159 cars of apples, 351 cars of pears, 9 cars of plums, 125 cars of peaches—making a total of 1188 cars this season.

Reports from all sections of Norway indicate the poorest fruit crop in more than 30 years. Apples have failed, pears are small and in many parts of the country have not ripened. Plums have been so late as to ripen imperfectly. It is estimated that double the usual quantity of American apples and other fruits will be required.

The burning of Smyrna will seriously affect the American import of fruits from that city. The destruction of key bridges, railway equipment and the Smyrna tunnel will result in a loss of approximately 70 per cent of the fig crop. The flight of expert Greek workmen from the invaded territory is also responsible for loss, and it is estimated that the balance of the fig crop will be seriously injured.

# California Water and Power Act: Pro and Con

**On November 7, Californians are to vote on what is known as The California Water and Power Act. In that Act "It is hereby declared to be the policy and purpose of the state to conserve, develop and control the waters of the state for the use and benefit of the people." The Act is vigorously attacked and defended. We give below statements by Dr. James A. B. Scherer, formerly president of California Institute of Technology, and by Leslie B. Henry, an investment broker of Los Angeles.**

By James A. B. Scherer

HYDRO-ELECTRIC energy—who shall posses and control it, the public or private corporations? That is the question that burns in the heart of the storm now centered in California, but momentous for the nation as a whole. Four million horsepower, an amount equivalent to half of all the hydro-electric energy now generated in the United States, is the stake. The importance of this huge national asset becomes stupendous in view of the fact that if the people make a gift of it to a private corporation for the next fifty years, as they seem on the verge of doing, they will have no other comparable power source left. And it should never be forgotten that water power is in the end infinitely more valuable than such exhaustible power-sources as coal, gas, and oil, for it renews itself inexhaustibly.

Planted between the desert and the sea, the rapidly growing city of Los Angeles was compelled to reach out for fresh water. To water its incoming people and irrigate its parched soil, it reached out across desert and mountains to the base of Mount Whitney and brought down melted snows through its now famous 230 mile aqueduct. At the very inception of this undertaking the municipality encountered hostility from far seeing power corporations. In 1906 President Roosevelt gave his decisive assistance to the city as against these private power companies in the following characteristic deliverance:

"I am impressed by the fact that the chief opposition comes from certain private power companies whose object evidently is for their own pecuniary interest. The people at the head of these power companies are doubtless respectable citizens, and if there is no law, they have the right to seek their own pecuniary advantage. Nevertheless, their opposition seems to me to afford one of the strongest arguments for passing the law, inasmuch as it ought not to be within the power of private individuals to control such a necessary of life as against the municipality itself."

A consulting board of distinguished engineers had already pointed out to the city the value of power opportunities along the proposed line of aqueduct construction. This board, comprising Messrs. Freeman, Schuyler and Stearns, said among other things that "the conditions for the economical development and maintenance of power are very favorable, and tend to make the power development feature particularly attractive and valuable." From the beginning, therefore, the aqueduct builders—headed by William Mulholland—planned for developing hydro-electric energy as an immensely valuable by-product for the use of the people, to whom it was proposed thus to offer electricity as "a convenience rather than a luxury."

Success crowned these community hopes with results of astonishing magnitude. Taking advantage of sharp drops in the aqueduct over the edges of mountains in its long journey from the High Sierras to the sea, the city installed at four points of vantage four power plants, which now yield a total energy of 72,000 horsepower. This energy it has produced and distributed with such thrift as not only to fulfill its ambition in behalf of the householder's convenience, but also to attract manufacturing. For herein lies the chief reason why Los Angeles has recently won world wide attention as the tenth American city not only in population, but in manufactures; whereas only a decade ago its manufactures were a negligible quantity, the despair of its most zealous promoters. The whole tale is told in a paragraph by the president of a gigantic industry that has just built a $25,000,000 plant in the city:

"When we came to survey the coast, as we did, for six weeks, with skilled men, we found that Los Angeles had the cheapest fuel on the coast, we found that Los Angeles had the cheapest power on the coast, we found that Los Angeles had the only supply of fresh water sufficient for our needs. We had to come to Los Angeles, if for no other reason than water."

Perhaps the most convincing tribute paid to the city's management of its power assets came from three engineers of international standing, O. H. Ensign and Professors W. F. Durand and Harris J. Ryan, the last two of Stanford University, when summoned by the public service commissioners to give to the people of Los Angeles their impartial opinion as to the efficiency of the municipal power plant, in view of attacks made against it.

"In conclusion," these eminent engineers reported, "your committee considers that the city has a most ex-

(Continued on Page 426)

### VOTE FOR THE WATER AND POWER ACT

The Water and Power amendment is a conservation plan, not merely a power measure; it will make it possible to irrigate 10,000,000 acres of dry land and store winter flood waters which now yearly menace the state.

In the release of stored waters vast quantities of hydro-electric power will be developed, as a by-product, to be sold to the people at cost, without increased taxation. All the costs, including interest charges, will be paid in rates.

There can be no blanket bond issue of $500,000,000 under this measure.

The power companies of California have outstanding securities in excess of $500,000,000. They have announced plans to spend $1,000,000,000 additional in ten years. Under the water and power amendment, therefore, the power companies will not be deprived of their business; they will be relieved of much costly financing.

The state can borrow money at 4 or 5 per cent while the power companies financing will cost 8 or 9 per cent. The saving in interest rates alone would put millions into the people's pockets.

The water and power board is given only the powers necessary to do the people's work. These powers are not greater than those of the directors of any privately owned public utility corporation. The members of the board are subject to removal by the legislature and recall. Corporation directors are under no such restraint.

The act provides that all records of the water and power board must at all times be open to the inspection of the public.

This measure provides a method for retaining in the hands of the people their water and power resources. It will break the grip of monopoly, bring lower rates, and lower taxes because it will increase taxable wealth by the irrigation of dry lands and the development of new industries, with cheap and abundant water and power.

It is not government ownership—It is truest cooperation.

By Leslie B. Henry

THE total state debt of the 48 states of the Union is $1,071,000,000. The water and power amendment to the state constitution to be voted upon by the people of California next month calls for an appropriation of $500,000,000, approximately half the total state debt of all the states of the Union. There, in a nutshell, is the situation which interests me more than any other to confront me at the polls, interests me as an investment banker, and should interest the readers of the California Cultivator as property owners or prospective property owners and taxpayers.

For in this measure is involved the credit of the whole state of California and every municipality and every subdivision of a political character in it; every school district, every irrigation district, every reclamation district, every private corporation, every ranch owner, and every owner of property of any kind. The whole credit of what constitutes the state of California, as well as of the state itself, is involved. And why? If half a billion of dollars is created as a debt, investors throughout the United States, looking to California as an investment field, will consider very closely what effect this new $500,000,000 issue will have upon the market for other securities which we may have to issue.

Can we place the whole credit of the state of California, to the tune of half the total debt of the 48 states of the Union, behind the water and power act alone and still expect the investors of the country to come forward under the same impetus as in the past and also buy what they realize is an increasing debt for purposes of education and road building and harbor improvements and the other branches of state and municipal activity?

If there is proper power development and proper water development, development that is not extortionate or unfair in its rates, and promising to continue to furnish efficient service to all the people of the state, then there is no need to erect this tremendous monument of debt that will make extremely difficult the financing of the other projects that still remain before us in the state of California. It is to that development that I will address myself before discussing the particular terms of the act.

There is within the state of California today a great hydro-electric development, of a more modern character, distributing its product to a larger number of people, to more varied industries, than anywhere else in the world today. We distribute our power over transmission lines that were unthought of in their capacity by the engineering genii of the world outside of California.

The greatest progress made in electrical engineering in the world has been made in this state and it has been made entirely by those known as private power companies. The largest public development of hydro-electricity in the United States, or in the North American continent outside of the Ontario development, is in the city of Los Angeles.

Los Angeles has a potential hydro-electric development on its aqueduct of about 150,000 horsepower. To date it has brought into actual distribution about 75,000 horsepower. Yet, during the period that that 75,000 horsepower, or 50 per cent of its capacity, has been developed under the credit of the city of Los Angeles, representing all the enterprise and genius of its city officials, one private power company has brought into being in the same period 220,000 horsepower.

The total investment of private power companies in California hydro-electric development totals today in excess of $1,000,000,000, and today we are in advance of our immediate requirement for power in this state.

But to call these "private power companies" is a misnomer. For there is not a rate charged for power, nor a kilowatt hour of electricity developed but what every bit of the process of construction, of the production of power, of the distribution and of the price at which it shall be distributed is at the direct command of the railroad commission of California, chosen by you and by me.

There has been a very common idea that the state under this act is to supersede the power companies in the field in which they operate; that the state, with $500,000,000, is to possess all the power in California and distribute it to the people. But the total capital value of the power company properties has been estimated by the engineers of the state railroad commission in excess of $1,000,000,000. Moreover the further development of water rights now held by those power companies will total another $800,000,000 in the next eleven years.

The water and power act appropriates $500,000,000, or less than one-third of the amount necessary to purchase these properties and develop them. That leaves as the only possible field into which this $500,000,000 can be turned the development of new projects.

During the last 20 years the mountains of the Sierras and the Pacific Coast range have been searched from

(Continued on Page 425)

### DANGER POINTS IN WATER AND POWER ACT

Adds $500,000,000 to state debt, making California carry more than 50 per cent of total bonded indebtedness of all 48 states in Union.

Creates board of five members, not elected by people but appointed by governor, to have uncontrolled administration of the $500,000,000.

No projects are outlined or specified. The political board decides when, where and how every dollar shall be spent.

Interest at 6 per cent and sinking fund requirements, amounting to $40,000,000 yearly when the bonds are issued, may be raised by taxing the people. Losses may also be made up by taxation.

This is not public ownership, as the people have no control or voice in the operations of the board. It blocks public ownership by placing such a heavy burden of debt on California that bonds for needed public improvements could not be sold.

It is not the Boulder Canyon dam project. The United States government will build and pay for that undertaking.

It is not like Ontario, Canada. There the people control the power board and its expenditures.

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

## EDITORIALETTES

The present campaign for—and against—the California Water and Power Act is resulting in a liberal education as to one of California's greatest assets. Really it is becoming the very greatest of all assets. The time was when the gold in the mountains added most to our wealth. Then it was the golden grain of our valleys, later the golden fruits, now it is becoming hydro-electric power. We are tramping over mountain ranges looking for new possibilities for hydro-electric development and we are learning of our own state.

* * *

The Cultivator gives this week much of its space to discussion of hydro-electric development and opportunity for proponent and opponent to discuss the Water and Power Act. So it is fitting that one of the plants where hydro-electric power is generated should be given position on our cover. This is plant Number 2 of the Big Creek district owned by the Southern California Edison Company. Other illustrations and items regarding this great installation are given on the third page.

* * *

Both sides are presented in the discussions and in a way which permits Cultivator readers to read and weigh the arguments presented. Less than one-fourth of the potential power of the Sierra Nevadas is now developed. It will take hundreds of millions—possibly billions of dollars to install plants which will turn the God given waters into power, warmth and light, and it is well that California should discuss how best to do it. The question is big enough to call for most thoughtful consideration. We believe it is aided by careful consideration of the present accomplishment, and methods already planned for still further development. Proper settlement of the question is secured more quickly through quiet discussion of facts than by partisanship in which heat is more evident than light.

* * *

Riverside folks are proud of the Southern California fair. Some of the livestock classes were not as full as in former years but other exhibits were declared even better than ever. The "circuit" in Southern California ends at Pomona this week. A more cooperative spirit has prevailed this year between different communities, which has secured finer exhibits for all these fairs than would have been possible otherwise.

* * *

Collector Goodcell of the Los Angeles office of the internal revenue bureau reports that California paid $145,000,000 in revenue taxes during the past year. This is more than a third of the total amount which the new tariff bill is expected to produce in the whole United States. Mr. Goodcell also reports that tax collections on theater admissions in Southern California were only a little over a half million in 1918 but in the year ending July 1, 1922, they aggregated $2,527,621. It is estimated the attendance of theaters in Los Angeles alone will aggregate 108,000,000 for the year 1922. In incomes taxes the 1922 receipts were $35,821,215. This as against a trifle over $1,000,000 in 1915.

* * *

The bureau of markets has recently inaugurated a valuable addition to its work in a series of market reports, of great value to the livestock industry. Nelson R. Crow is in charge of the Los Angeles office and is furnishing for Cultivator readers a weekly review of the market situation.

## COUNTY CONVENTION

Mr. Teagarden, one of Placer County's most enthusiastic fruit growers, brings report from the great county convention closed recently in Auburn. A "county" convention is not exactly new in California but is somewhat along the line of taking up the old "institute" idea or taking the inspiration and enthusiasm directly into the field and amongst the producers. This convention was of particular value to Placer County growers because it was, to an extent at least, an adjourned session of the convention held a year ago. In that convention questions as to local tillage methods were discussed. Some of these questions were answered and some were not. Committees were appointed to bring in the answers at the next convention which is the one just closed. The answers were brought in and

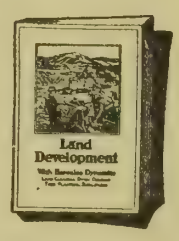
"That's the Stuff, Hercules"

"That's the stuff I want. I've got a lot of trees to set out and there's nothing like

HERCULES FARM DYNAMITE

to do it.

"I know it. Used it before and my fruit crop is paying me doubly for it."



*Send for this book—It is free.*

The Hercules Powder Co. has published a 75-page book, "Land Development", that has complete instructions for tree-planting, blasting between the rows, ditching, stumping, and boulder blasting with dynamite. Send for it today.

started so many other questions that now the committee is wondering when its duties will end. So the convention is adjourned for one year, and Placer County growers are already jotting down more questions to pass up to the committee and experts to be answered in 1923. Mr. Teagarden says that Placer County is a thorough believer in long pruning and much time was given to Prof. W. P. Tufts of the agricultural college. The Cultivator hopes to give later in full Prof. Tufts' address on long pruning.

### PASS THE LETTUCE

The federal department of agriculture has a press service which is sending out a remarkably valuable fund of information as to productions, supply in the market, estimates of next year's output, in fact such items as are of value to producers. If a producer of cabbage, for instance, wants to know how many cabbages are ready for market or how many will be ready for market a week or a year hence he is given through this press service, or, if he prefers, through a visit to one of the branch offices of the bureau of markets, a fairly close line on the situation. But it is a big country and we off here on the western rim have occasion now and then to kick. The Cultivator recently received statement on the lettuce situation. The productions of New York and some other states were given to the ounce but so far as that one report went, west of the Mississippi produces no lettuce. As a matter of fact the report in question had to do only with the "summer crop" while California and Florida produce "winter" crops. But this fact was not stated and the Cultivator wanted to know why the best state in the Union was ignored. The reply came promptly, the principal information, however, being that: "I am referring your letter to the bureau of agricultural economics in which this particular story was produced." Then the writer adds:

"Though I have never been in California, from all I have been able to learn the state should be proud of her productions. It also appears to me that when the state of California does not get her just dues through some slip or other, some proud son gets up on his hind legs and asks for an explanation."

Californians may not be willing to accept the hind-legged acquisition but, as suggested by Washington, we have enough legs with which to kick.

### CHINO COMMUNITY FAIR

The second annual Chino Community Fair will be held, November 1-4, featuring products of ranches on the famous old Rancho Santa Ana del Chino. The Chino Business Men's Club is putting on the fair.

This was one of the most famous ranches of California in the early days, being composed of two Mexican grants, the original "Rancho Santa Ana del Chino" comprising 22,234 acres and the "Addition to Santa Ana del Chino" 13,336 acres. The former was granted to Antonio M. Lugo, a Mexican alcalde, March 26, 1841, and the latter to Isaac Williams (Lugo's son-in-law) April 1, 1843.

This ranch was purchased in 1881 by Richard Gird, who brought it to a high point of efficiency in raising blooded horses and fine cattle. Gird was a man of exceptional vision and laid the foundation for the successful ranching now found in the valley. He started the city of Chino and brought in many settlers. One of his great accomplishments was the locating of an immense American Beet Sugar Company factory in the city and for many years that company disbursed hundreds of thousands of dollars in the valley.

The fair shows in all its details the advancement made in all departments of agriculture, horticulture and livestock raising. Old timers who have knowledge of the early history of the valley will be particularly interested in visiting Chino during the first four days of the coming month.

# Californians, Awake!

Human comfort and efficiency depend on light, heat and power—and light, heat and power depend on

| | |
|---|---|
| Coal | Wind |
| Oil | Wood |
| Gas | Water |

Wood for commercial purposes is gone. Gas, oil and coal are being exhausted. Wind is inefficient and insufficient.

**As long as the rains fall on the mountains**

## Hydro-Electric Energy

**Will be for us and our children. It will give us heat, light and power for our pumps and mills forever.**

Shall we keep this God-given Heritage, with which California is so wonderfully blessed, or shall we hand it over to Corporations which will exact profits in order that the few may live in luxury while the many pay tribute?

**Municipally owned electric plants in California have served the people at from thirty to fifty per cent lower rates than are exacted by the private power companies.**

The Province of Ontario, Canada, has made reductions as great as from 8 cents to 1½ cents per kilowatt hour.

**Public-spirited men, big men, will work for the people for lower salaries; interest rates are lower to the state than to the corporations—all costs are lower.**

The great power companies say we must make California safe for the Investor by voting down the California Water and Power Act. We say we will make California safe for the Producer (and do no injustice to the Investor) by voting for it.

## Preserve Our Heritage

**Vote "YES" on 19 X**

716 Delta Building Los Angeles, Calif.

# California Crop Report

IN the report issued by E. E. Kaufman, agricultural statistician, California cooperative crop reporting service, the following comments are made relative to the condition of California field and fruit crops as of October 1, 1922:

The first half of September temperatures were abnormally high in practically all sections, which materially benefited the rice but had a deleterious effect on beans, particularly throughout the Sacramento Valley. Fruit crops generally not affected. As a matter of fact, the warmer weather was welcomed by the dried fruit men as the drying had been held back somewhat by cool weather the latter part of August.

Light rains occurred in the vicinity of San Francisco, north along the Coast and throughout the Sacramento Valley October 3 and again on the 8th but were followed by clear weather and apparently little damage resulted. Harvesting of rice was probably delayed a few days and the drying of prunes and raisins in some districts interfered with to a certain extent. The Santa Clara Valley, the San Joaquin Valley and Southern California escaped without any rain.

### Indian Corn

The condition of Indian corn October 1 was estimated to be 88 per cent of normal as compared with 82 last year and a 10 year average of 88. The forecast of production for this year is 4,083,000 bushels as compared with an estimated production of 4,060,000 bushels last year.

### Oats

The preliminary estimate on the average yield per acre of oats is 35 bushels per acre and the area harvested 140,000 acres, making a total production of 4,900,000 bushels as compared with 3,780,000 bushels in 1921.

### Barley

The preliminary estimate of the production of barley shows the largest crop in the state since 1914. Tabulation of reports received from growers, dealers and warehouse men indicates an average yield of 34.7 bushels per acre. On the basis of 1,200,000 acres—our preliminary estimate of the acreage planted to this crop—the total production of barley in California in 1922 would amount to 41,654,000 bushels as compared with a crop harvested in 1921 of 29,700,000 bushels.

### Rice

The rice crop, which had been held back slightly by cool weather the latter part of August, showed considerable improvement during September; the condition on October 1 being estimated at 93 per cent of a normal. Assuming that the estimated acreage planted will be harvested, the production will be about 3,862,000 bags, 100 pounds each.

### Potatoes

The condition of the potato crop declined 7 points during September and on October 1 was but 86 per cent of a normal as compared with a ten year average of 82. In hardly any of the potato growing districts of the state is the average yield holding up to expectations. The estimated production is about 10,716,000 bushels, compared with 10,064,000 bushels last year.

### Sweet Potatoes

But little change occurred in the condition of the sweet potato crop. An increased acreage indicates a larger production than last year. Forecast of production this year is for a crop of 1,292,000 bushels against an estimated production in 1921 of 960,000 bushels.

### Cotton

The condition of cotton on September 25 was 80 per cent of a normal, showing a decline of 11 points since the August 25 report. Production is forecasted at 120,000 bales or a decrease of over 10,000 bales the past month. The high temperatures the first part of September caused more or less dropping of bolls making up the late crop.

### Hops

In July we estimated the area of hops at 11,000 acres as compared with 12,000 acres last year. Owing to the difficulty of securing pickers and poor market conditions only about 9,000 acres were harvested. The average yield was about 1640 pounds per acre, making the total production 14,760,000 pounds or about 80,000 bales.

### Sugar Beets

A decline of 3 points in the condition of sugar beets is noted as compared with September 1. The condition is now 85 per cent of a normal, compared with 82 last year and a ten-year average of 86. The production for the state is forecasted at 489,000 tons.

### Beans

The bean crop undoubtedly suffered more damage from high temperatures than any other field crop. Lima beans are not holding up to expectations and particularly is this true of the limas planted rather late in the season. The preliminary estimate of the area planted was 125,000 acres and the estimated average yield is placed at 1080 pounds per acre, making a total crop of Limas of 1,350,000 bags "Beans other than Limas" being later were harder hit by the high temperatures and condition of the crop is estimated to be only 75 per cent of a normal, which would indicate on the estimated acreage planted, a total production of about 1,400,000 bags.

### Apples

According to the reports, the condition of apples declined two points during the month. Forecast of production, based upon 85 per cent of a normal on October 1, is for a crop of 7,587,000 boxes compared with 6,500,000 boxes in 1921.

### Peaches

The report this month is on the total production of peaches as compared with a normal. In some counties of the state better than a normal crop of peaches was obtained this year and the final report indicates a total production of 101 per cent compared with a normal production, forecasting a crop of about 425,000 tons.

### Pears

The pear crop this year is turning out much better than expected early in the season. Shipments to date are about 1,200 cars more than for the same period in 1921, while the tonnage turned over to the canneries has been slightly larger than in 1921. The crop was estimated to be 90 per cent of a normal on October 1, which would indicate a total crop of around 110,000 tons.

### Figs

According to reporters, figs improved one point during September, being now 90 per cent of a normal. Last year the condition on October 1 was 83.

### Prunes

The total production of prunes for this year is estimated to be 80 per cent of a normal production. Weather conditions during September were ideal for the prune grower and but a small percentage of the crop is now in danger from rain. While some prune growers are not getting quite as large a tonnage as expected, it is believed that the total production will be well around 100,000 tons.

### Almonds

No particular change is indicated in the condition of the almond crop and the estimated total production will be about 9,000 tons.

### Walnuts

A set-back to the walnut crop of three points was reported from some of the southern counties where slight damage the first part of the month occurred from high temperatures. For the state as a whole, the total production will more than likely equal the record crop of 28,000 tons in 1919.

### Oranges

Oranges are estimated to be 60 per cent of a normal, showing a slight increase over the condition as reported on September 1. The condition last year was 88 as compared with a ten year average of 78. A light crop of oranges will doubtless have the effect of increasing the size of individual fruits which to some extent accounts for the improved condition the past month. Based on a condition of 60 as compared with a normal, the forecast of production would indicate a crop of about 15,000,000 boxes of oranges.

### Grapes

Wine grapes, according to the reporters, declined 3 points during September. The car situation is still serious and it is extremely doubtful if the estimated tonnage of 400,000 tons can be marketed without serious loss.

Table grapes show a slight improvement in condition. Inter-state shipments last year of fresh grapes, both wine and table, amounted to 30,623 cars of which about 13,500 cars or 44 per cent had moved by October 1. This year the movement has been about 15,500 cars or only 35 per cent of the total estimated crop.

Owing to the difficulty of securing cars for the shipment of fresh grapes, it is more than likely that the tonnage

MAXWELL

The Good

MAXWELL

The most remarkably repair-proof car of its class and price ever built. This is the conclusion of any owner who has driven the good Maxwell ten thousand miles or more.

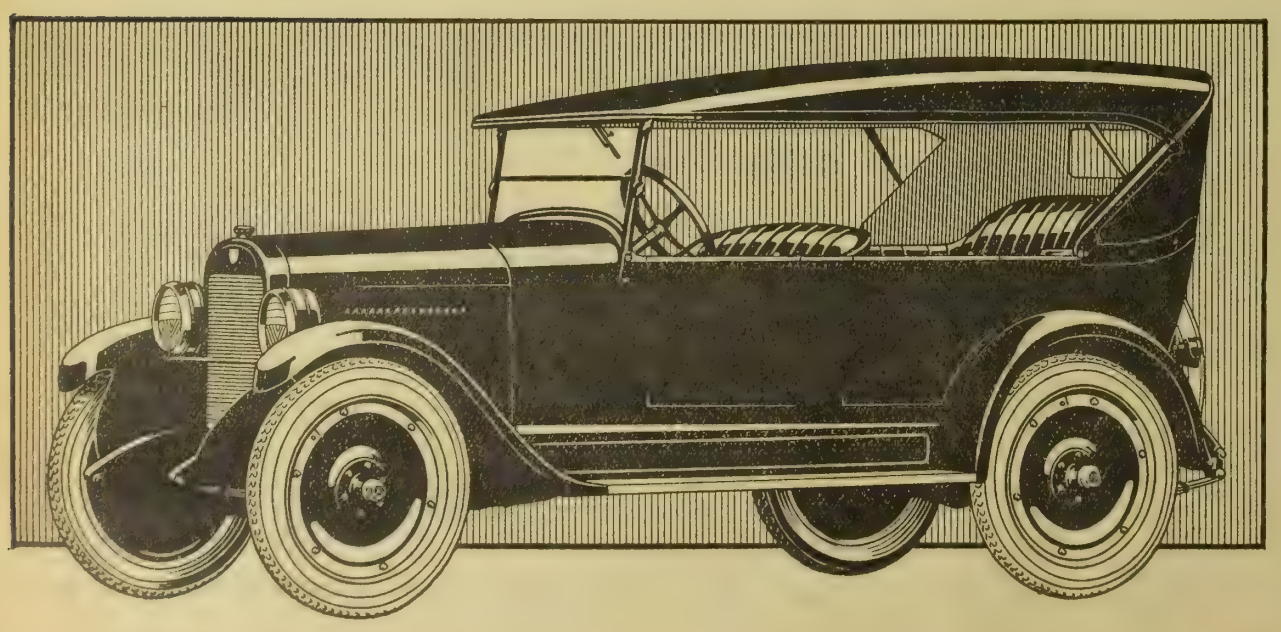
MAXWELL MOTOR CORPORATION, DETROIT, MICH.
MAXWELL MOTOR CO. OF CANADA, LTD., WINDSOR, ONT.



of raisins will be somewhat larger than expected earlier in the season. With the increased bearing acreage of raisin grapes the normal production of raisins would be about 250,000 tons if the entire crop was so utilized. A condition of 96 per cent as compared with a normal would therefore indicate a crop of about 240,000 tons.

## WATER AND POWER ACT—AGAINST

(Continued from Page 421)

Mexico to the Oregon line for every source of water power that could be practically brought to the service of California. Those sources that remain represent the smallest head of hydro-electricity that can be developed, and they can be developed only at a maximum of cost and with the greatest engineering hazard.

The bondholder or stockholder that advances money for an engineering project that turns out a failure in the hands of a company financed to develop that project loses his or her money in that project. But under the water and power act there will be no losses to bondholders when projects fail. The half billion of dollars must be spent in developing the tremendously expensive and hazardous projects undeveloped by the private companies, but there will not be a dollar lost to the investor outside the state who buys the bonds. Still there is left with you and me the eternal obligation of paying every dollar of the principal and interest of the bonds outstanding because they are bonds of the state of California.

The water and power act, if adopted as an amendment to the state constitution at the polls next month, will be administered by a board of five men appointed by the governor. Its acts will not be subject to review. And though those who are supporting this act claim that there is a check on the board through the finance committee of five named by the act, anyone reading the act itself will see that this statement is not true.

The finance committee is to be composed, if formed, of the governor, the chairman of the board of control, the state controller, the state treasurer and the chairman of the water and power board. The committee has no discretion. It is absolutely commanded by the language of the act to issue and sell bonds when ordered to do so by the board. There is no power that can withhold the board from issuing such an order.

If there is one section of this act the bond houses of this country are interested in more than in any other it is the second paragraph of Section 9—"If at any time the moneys in the state treasury applicable to the payment of interest or principal of said bonds shall be insufficient to pay the same as it falls due moneys shall be temporarily advanced from the general fund in the state treasury such sum annually as will be necessary to pay such interest and principal."

The act is not designed as a taxation measure. It is for "water and power at cost" and yet there is specifically provided in the section I have just quoted the right to go out and levy taxes through the general fund. But if at any time during the course of a political election the governor, having power to appoint the board, it should occur that any increase in taxes would be a mighty unsatisfactory argument in the election of a new group of officers to administer the state, it is made possible to escape taxation through withdrawals from the general fund by issuing new bonds to pay the principal and interest. Section 7 says "if at any time the revenue from projects shall be insufficient to pay the interest on principal of outstanding bonds as the same fall due, the committee, with the consent of the governor, in order to avoid appropriations from the general fund and resulting taxation may issue and sell bonds to provide funds to make such payments of interest or principal."

Proponents of this act have made a very specific claim that this act must pass if the municipalities of the state shall ever have the right to own or develop water and power in this state. That is an absolute fraud, that statement. There has existed ever since 1913 one act under which municipalities in California can associate themselves together for the doing of anything they desire in the way of water and power development, as well as in the construction and financing of other public works, as an association of communities. These powers were enlarged in 1916.

Why are those who support municipal ownership and municipal administration standing back from the acts that already exist and centering all their support on a measure which is not, after all, municipal ownership in its nature? I will tell you why.

This act carries $500,000,000. The others do not. This act carries half a billion of dollars to be spent on projects that never have to be submitted to the voters.

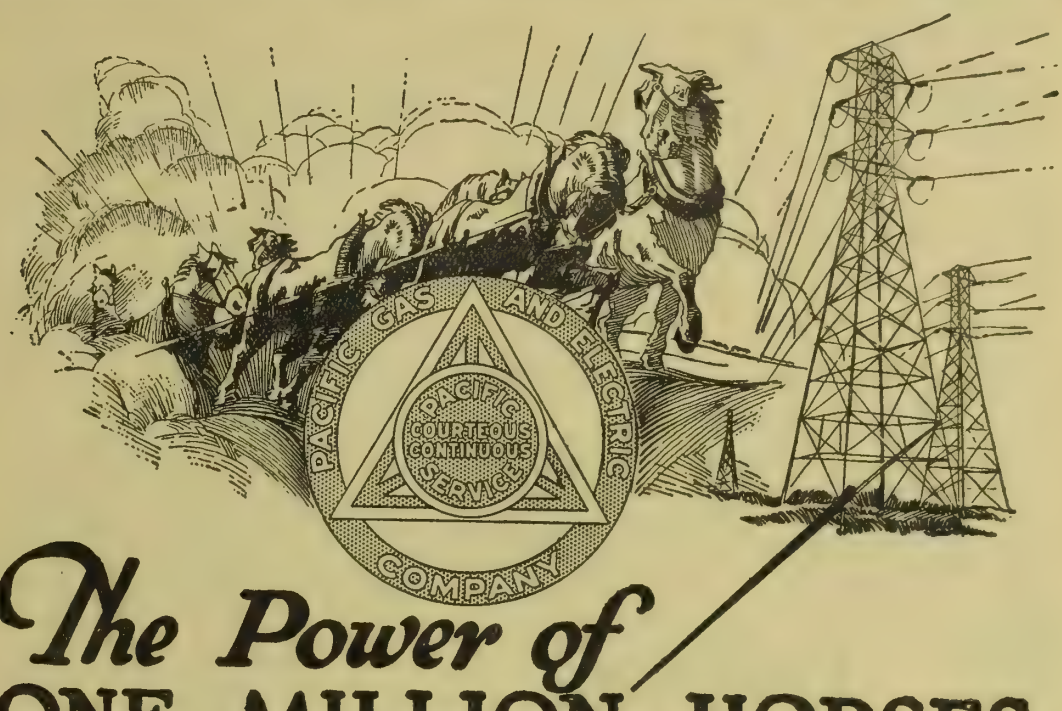
Under this other act, if half a dozen Southern California cities, for instance, decide that in an improvement of the Arrowhead dam and the building of a power house there they could create for themselves a better field for power they would have to come before the taxpayers of the section to be benefited and obtain the money to finance that specific project.

But under the constitutional amendment of which I am writing $500,000,000 is voted with its enactment, and from that time on neither you nor I nor any other taxpayer has one word to say as to how it shall be spent or where it shall be spent. Why, this water and power board is not even subject to civil service and can hire and fire and set salaries as it pleases! Imagine the administration of the fund of 500,000,000 by political organizers—and the type that can be bought for $20 a day!

With tens of thousands of employes the board will control the political destinies of the state. And besides that they will control the development of water and power, the two most vital essentials to human life, in the most rapidly growing state in the American Union. If that is not political power with a whip on it, I don't know power.

Permit me to return to the theme of my introduction. As an investment broker I am interested in maintaining the good credit of the state of California. And as citizens of California, as either farm owners or as progressive farm owners, readers of the California Cultivator are interested in maintaining the state's credit.

Good credit is based, first of all, on good judgment and a sense of responsibility. It does not show a sense of responsibility when $500,000,000 is put in the hands of five men who have the right to appoint their own administrators of those funds—not even deposit the money in the state treasury—to be expended on projects that are not definitely outlined and which are of themselves restricted to the most hazardous engineering feats. It does not show good judgment to expend a stretched credit on the development of water and power when we have other obligations in the shape of a need for more and better schools and roads and a thousand and one other things. It does not show good judgment to turn the development of life's greatest essentials, water and power, over to an untried political board when already the state has the cheapest, most swiftly and efficiently distributed service of its kind in the world; when the development of hydro-electricity, its distribution and price are absolutely within the control of a body controlled by the voters of the state, the state railroad commission.



The Power of ONE MILLION HORSES

To be provided by this company when the demand for it is felt!

A GOOD RANCHER keeps no more horses than he needs. This company is keeping in step with the demand for power in the same common sense manner.

Today, the Pacific Gas and Electric Company's 32 power plants are equipped to generate 481,836 horsepower.

Its Pit River Power Plant No. 1, just completed, will add 93,000 horsepower to the present capacity.

And as soon as the *demand arises*, additional hydro-electric power plants along the Pit River will be developed by this company to add 350,000 horsepower more.

California ranchers, already provided with more and cheaper power than the farmers of any other state, are assured ample electrical energy for their need —*and at the lowest rates possible to produce it.*

Ask your banker to explain how rates are made to cover costs, to pay interest to stockholders and to provide a fund for development.

**WATER AND POWER ACT—FOR**

(Continued from Page 421)

cellent and adequate equivalent for the money thus far invested,—a power plant capable of delivering horsepower at a cost of generation which will insure a valuable profit to the city; further, for a relatively small additional investment, a total of 105,000 horsepower delivered at the city, and at a cost which we believe to be thus far unrivaled in comparison with other like developments of hydro-electric power.

"As a further subject, and lying somewhat beyond the immediate scope of your request, this committee desires of its own motion to express its high appreciation of and full confidence in the professional ability of the power bureau organization. The officials of this bureau have worked unceasingly with the highest professional zeal and skill for the best interests of the city, as represented by its power projects.

"From our intimate acquaintance with the work of this organization we desire to assure the citizens of Los Angeles that they may have full confidence in the professional skill, untiring zeal and unquestioned integrity of the officials of this bureau, and they may rest assured that the interests of the city are in the very best of hands in all matters dealing with the subject of power development and distribution.

"These remarks are dictated by a feeling of duty on our part to the citizens of Los Angeles, in view of the malicious and unjustified attacks which have been made, seeking to undermine the confidence of the citizens in the work of these public officials."

An initial investment of $10,000,000 was authorized by the taxpayers for this municipal power system. Of the authorized bonds $8,851,000 were sold and used for construction of plants and the system. At the present date the investment stands at $13,283,000, with an indebtedness against it of $7,689,000. For the fourth fiscal year of operation ending June 30, 1921, the plants have made a surplus earning, or true profit, of $1,046,357. This is a genuine surplus. Although not required to do so, the city keeps the books of its power system after the exact methods prescribed by the California state railroad commission for power corporations. So this surplus of $1,046,357 represents a year's earnings in excess of the total expense of operation and maintenance, together with interest and bond amortization allowances on all outstanding power bonds. Instead of increased taxation, a recent reduction of 15 cents in the tax rate was made possible by the earnings from the Bureau of Power and Light. Approximately $3,272,000 in revenues derived from four years and three months of power operation has been invested in expansion of the plant. Most important of all, rates to the people for power and light have been reduced an average of 30 to 40 per cent. Power for industrial use is sold to large consumers at 1 cent a kilowatt hour or at even less cost, depending on the quantity consumed. Los Angeles stands unique among the larger cities of the world as giving, first hand, decisive aid and encouragement to the development of manufactures, and this with a profit to herself.

The chief reasons why the city can undersell private corporations in production and delivery of power are the following: the city pays from 2½ to 3 per cent less interest on bonds, due to superior credit of public over private securities; the city pays no dividends to stockholders, but produces for use at cost; the city has no large staff of exorbitantly paid officials; the city pays no taxes; the city maintains no expensive lobby, and no high priced publicity bureau.

It was in spite of united antagonism from all private power companies serving electricity in Southern California that Los Angeles completed an initial municipal power plant early in 1917 and began the distribution of energy. Not long afterward the friends of community enterprise had the satisfaction of seeing the city score heavily. For the chief of the private corporations, making a virtue out of business expediency, not only entered into a distributing arrangement with the city, but declared a conditional surrender. This truce—which, as hereinafter appears, was but temporary—took the form of an option maturing in March, 1922, by which the city might take over at fair valuation all the distributing lines and business of the Southern California Edison Company within the city limits. The progress of this undertaking was so bitterly opposed by one of the more obdurate companies doing business in Los Angeles that it was not until June, 1919, that citizens were able to say at the polls whether they were willing to provide funds for accepting the Edison option. By a two-thirds vote they said, Yes; voting a bond issue of $13,500,000, of which $11,000,000 is for purchase purposes, the balance being for additional power construction. Meanwhile—and this is most important—manufactures have grown so amazingly in consequence of

# Why Risk Your Health?

THE path of the coffee or tea drinker is beset with dangers to health and comfort. These dangers lurk in the irritant, caffeine, which is the active principle of both coffee and tea.

For those who enjoy a well-made cup of coffee or tea, but find that it makes them nervous, wakeful and irritable, there's satisfaction and freedom from discomfort in delicious Postum—the table beverage of no regrets.

Its fragrant aroma and rich, full-bodied flavor are delightful. Postum is made from roasted wheat and contains no caffeine, nor any other harmful ingredient whatsoever.

Order from your Grocer TODAY!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

# I Can Save You Money on Fence

I am specializing in farm fence materials. I buy steel posts and fencing in tremendous quantities which come in great boat shipments at lowest possible freight rates direct to my warehouses in Los Angeles and Oakland. This way I make possible enormous savings, and these savings I pass right on to my farmer friends. **Furthermore, I guarantee personal service and prompt delivery.**

## Red Top Steel Fence Posts

The RED TOP Studded Tee is a new line post for heavy field, pasture, highway and railroad fence—stronger and better than any fence post on the market. My FREE catalog tells how nationally known engineers tested this post and found it 25% stronger than a new Punched Tee Post and 32% stronger than a Round Sheet Steel Post. **Be sure to read about this test before you buy fence posts.** The Red Top Studded Tee Post is a solid bar of Tee steel, without a single hole, equally strong throughout every inch of its length. **Nothing to weaken this post; everything to strengthen it.** (See illustration.) I recommend it as the most durable post on the market. Prices are so reasonable that you cannot afford to buy even wood posts.

low cost power supplied by the municipal plant that the closing of the option in question will not begin to meet the demand. As William Mulholland, "the man who built the aqueduct," has put it, "in less than ten years all the power we can develop will be in use and we shall have no surplus left for future growth. We are in the electrical production business by the mandate of the people expressed over and over again in elections. There can be no withdrawal. Who has a better right to the gifts of God, the people of a great community, or private individuals?"

Driven therefore by urgent necessity, the city looks about for more power. Its attention is finally attracted by the Boulder Canyon project. At this juncture all truce is called off, and conflict reopens — with a difference. The struggle is no longer local, but becomes of national importance. For it is true, as a distinguished publicist says, (in a letter to the writer) regarding this power situation as it now stands, that "it is the greatest problem that confronts the West, and one of the greatest domestic problems of the United States." * * *

Pasadena also keeps its books as prescribed by the state railroad commission, so as to justify comparisons with private corporations. These books show a surplus of $410,805 at the close of the fiscal year 1920, in spite of the fact that light and power are now furnished to citizens at one-third the rates formerly charged by the Edison Company, and at five-eighths the rates still charged by this company to neighboring towns. * * *

Community construction and control under federal or state authority is distinctly a different matter from government ownership and management as commonly conceived. The mismanagement of our railways by a Washington bureaucracy has left such a hot spot in the popular memory that one's mind has to be consciously cooled to discern this important distinction. As a matter of fact, a citizen may be very much the friend of community enterprise and at the same time the enemy of centralized authority in political bureaus at Washington. Reduce the unit of management; get a public utility close enough to its consumers to enable the people themselves to safeguard their interests; keep the ownership vested in the people; then use the overhead government, state or federal, to dispense equal justice to all. Along some such line must move any effective immediate reform in behalf of the popular interests.

Such reform is being attempted in California. The last legislature paved the way for it with an act enabling any number of towns to pool their financial resources for community enterprise in handling electric power. Encouraged by this act, but not satisfied, a league of municipalities has evolved out of local conditions. Alarmed by the eagerness with which private corporations are now hurrying up the seizure of remaining power sites throughout the state, and emboldened by such notable achievements as those of Los Angeles, Pasadena, and Palo Alto, these 250 banded municipalities are now supporting an act of much wider scope than that passed by the last legislature. * * *

The five hundred millions investment can hardly be considered a menace to the future of a great state when one corporation announces it can secure twice that amount and will use it in hydro-electric development if given permission.

Neither will the issuance of bonds affect the credit of California. It will require years to make sale of the various issues as needed and complete the storage, power plants and distribution lines. Every new plant installed will add to the state's assets. Every new plant installed will make possible more attractive cities and more productive farms and lands not now under cultivation will secure water from storage which will be possible because of this act, if passed. Bear in mind it is the "California Water and Power Bill" with the emphasis on the Water. Water will increase wealth and may even lower taxes. It has done so in the city of Los Angeles.

"Dishonorable men, partisans, selfish politicians will misappropriate funds, enrich themselves and ruin the credit of the state and dispoil the people" it is claimed. But no instance is given where such action has resulted. Innumerable instances have been given, and more can be, where highly honorable and efficient men have served their community without pay or for a nominal compensation and built up an institution which will perpetually increase in value to the state or community. Besides the people are served at a fraction of the charges which a corporation is compelled to make if it pays the high interest rates which they demand.

### PALESTINE FARMER HERE

David Yosphe, a farmer and agricultural expert of Haifa, Palestine, is wintering in Los Angeles to study our crops and ways of growing them. Mr. Yosphe was a fellow worker with and an understudy of the late famous Aaron Aaronsohn. The climate of Palestine, especially in ranges of temperature, is closely similar to that of California and "nowhere else in the world," said Mr. Yosphe, "could I learn so much that we of Palestine need, as in California."

The railroad commission has ordered G. H. Richardson, a rancher living near Fullerton, Orange County, to continue to serve water from his pumping plant to certain adjoining farmers. Richardson shut off the water supply because his consumers refused to sign an agreement waiving their rights to water except at his discretion. The commission held that the acts of the defendant had dedicated his pumping plant to public service.

## The 1922 Modesto Fall Sale

### THE TRACTOR

Through clouds of dust I see the iron horse
Panting progress up and down the course,
Turning over soil and stone and sand,
Obedient to the driver's hand.
Man's conquest seems almost complete:
Nature's God and man together working,
With no fearing, doubting, shirking,
Yield rich returns, with blessing replete.
Great emancipator, the chugging tractor.
In every line of husbandry, a factor.
Tireless thing to twenty horses equal,
Plowing, planting, harvesting,
Hauling, digging, sowing,
All these, and more, the sequel.
Man has more leisure for good desired;
More brain and less of brawn required.—
Walter M. Boston, San Dimas.

### THE THREE GIFTS

By Clara Peterson

THERE was no one so lovely as Aurelia, the Sun Princess.

Everything about her was like the sunlight. Her hair was threads of dancing gold. Her eyes were deep and bright. Her white skin was pure and radiant.

At her birth the fairies and the wise women had promised that wherever Aurelia dwelt, there sunshine should linger too.

It happened that Aurelia's city had always been sunshiny and fair but over the mountains was the mighty city of Tralgar where half the days began and ended in gloom and there was scarcely sunshine enough to ripen the grapes and apples. It is not strange that the old ruler, Marco, thought, as he watched his three sons return from the hunt.

"It is time that one of them was wed and there could be no more fitting bride than the Sun Princess, Aurelia. I shall send her a message tomorrow and upon its heels shall follow Christopher, my eldest.

Christopher was the handsomest of the three. He was darker than his brothers, and taller and his black eyes sparkled more alertly. Not only that, but he could compose for the harp, songs which were so sweet or so tempestuous that no one could listen without tears.

Claudius, the second son, had eyes that were brown instead of black, and the pictures he painted were like live woods and flowers hung upon the walls.

Constant, the third son, had just reached manhood and he could neither compose nor paint. In fact, anyone looking from the castle window was sure to see Constant's blonde head bending over a new plant in the garden.

That night after the three and their father had dined in the gloomy hall, Christopher nodded his head proudly at mention of Aurelia's name. He had always felt secretly that the Sun Princess belonged in the gloomy city of Tralgar and who was better fitted to bring her there than Christopher himself!

As for Aurelia, the message was brought to her on a golden tray, a painted parchment tied with purple ribbons. She had been feeding the doves on the roof of the palace and their grey wings fluttered around her rose pink gown as the pearly sky surrounds a tinted cloud.

Her lovely eyes grew very wide and grave as she read the message. She had known that sometime it would come but she did not smile as she descended to her room and stood before the mirror. She looked long at her reflection until her cheeks grew pinker than her dress.

"At last he comes! What will he say—that I am his sunlight, his princess!"

Her shining head drooped.

"Will he forget to woo me as a girl, to let me know that he loves me for myself alone—"

Aurelia drew her crimson footstool up before the window which looked out over the mountains and until the sun sank behind the peaks she sat there dreaming, her golden head bowed upon the sill.

Three days later with trumpets sounding and banners streaming in the wind, Christopher and his train arrived at the palace. But instead of a blushing princess waiting to receive them, surrounded by her maids and lords and guests, a little maid came running into the courtyard. She courtsied daintily and stood looking up at the haughty Christopher on his prancing white horse. Her voice was frightened, yet she spoke bravely.

"Welcome, son of Marco! The princess has sent me to bid you enter."

For a moment Christopher frowned but she was such an unoffending, pretty little maid in her white cap and short black dress that at last he smiled upon her and descended from his horse.

Christopher and his retinue were fed splendidly on roast beef and mounds of jellied tongue and suet puddings, and though the princess did not appear the palace was so wonderful with its floods of sunlight and its gleaming decorations that no one missed her. At last, however, when his friends had departed and Christopher was left alone to wander through the halls, the strangeness of his welcome smote him and he began to frown darkly.

It was then that the little maid darted through the tapestry hangings and handed Christopher a note from the princess. He read it frowning. Then his forehead became smooth and he tossed his black head and laughed.

"Your mistress is indeed wise, little one. It is not enough that I bring her jewels from the coffers of Tralgar. She demands a gift from me. Let me read again—dainty note! For one week the princess will not appear; one week to prepare my gift, yet it is simple, little one.

Christopher ended his musing and smiled at the maid. He strode with pride to the harp which stood lighted gloriously by the setting sun. Close to its strings he drew a golden chair and then his questioning fingers began to play. With closed eyes Christopher sought his gift to the princess, a new melody so wonderful that at the very sound of it she would belong to him.

The small maid lingered in the hall and listened breathlessly.

Each day Christopher's fingers caressed the harp strings with a surer touch. The gracious sunlight which enfolded the city from morning till night seemed to lighten the soul and the fingers of the musician so that he felt himself composing as never before and the song grew like a gentle, laughing, widening river under his touch.

But most of all the little maid inspired him. While he played she left her duster or her broom and sat with hands clasped and her little feet on the first round of the great carved chair beside the window, and whenever Christopher looked at her, her eyes were wide and starlike or wet with tears.

Then when the day's work was over they would light the candes in the room which held the coziest fireplace and the little maid would bring in muffins she had baked. They would laugh while she stuffed yellow pats of butter into the smoking centers and while she made tea over the fire and set out jam and cold meats and frosted cakes, all on the loveliest dishes.

Each night while they ate, Christopher told of his city, Tralgar, of the wars his people had won, of the riches they possessed and even of the wolves and the deer he and his brothers had shot in the mountains.

The little maid listened and smiled or was sad as each story wound to its ending, and Christopher watching her in the candle light sighed often for surely she was as gentle and as charming and as beautiful as any girl could be.

But at last the week ended and Christopher's gift was finished. The maid listened with downcast head to the song which came from the harp. It had become a part of the sunlight, so sweet and pure and radiant that at last the little maid could bear it no longer and she turned to leave the room.

Christopher caught her hands in his and looked into her face.

"I shall never forget this week," he said softly. "I am afraid that—I love you. But now, heigho, we must think of other things! When and where is your mistress to receive my gift?"

It was long before the maiden answered. When she raised her head, her face was calm and white.

"It is indeed time for you to play before the princess. She has said that at the sunset hour she will sit upon the balcony in the upper room. She will listen to your gift. If it pleases her she will descend to you. If her heart is not touched she will not move, and you have failed."

The maid's voice sank lower and lower so that Christopher scarce could hear the last few words, but when he had bent his handsome head and caught them he flushed with triumph and the sweetest chords of his gift seemed to sound again in his ears. Well he knew that the heart of the princess would melt as she listened, that she would descend as though carried on the wings of the pleading song which floated up to her.

He was still flushed with triumph as the sunset hour descended and he entered the great dim room where the harp had been placed. A mellow, golden light came from the painted vases which swung from the balcony's pillars. The form of the princess seated there was lighted, yet was dim. In one look Christopher saw that she was all in snowy white. He seated himself before the harp and began to play.

When the wondrous melody had laughed and sobbed to its quiet ending Christopher opened his eyes slowly and gazed to either side for the princess. He started to his feet in surprise and anger and gazed incredulous toward the balcony. The princess had not moved. The dim and lovely face

"Now Mother Goes to Market by Motor"

For the Woman Who Drives Her Own Car

THOUSANDS of women who are driving Overland Sedans wonder how they ever got along without them. Everything about an Overland Sedan is remarkably simple. The driver's seat is comfortable. The gears shift easily. Steering becomes second nature.
Built with scrupulous care, the Overland Sedan is a car to be proud of—the upholstery is rich and inviting, the cushions deep and resilient, the seats roomy and comfortable. The body hangs like a hammock on the patented Triplex Spring Suspension—road shocks are banished. 25 miles to a gallon is common experience. Tire mileage is surprisingly high. For the woman on the farm the Overland Sedan is without question "the greatest motor car value in America."

WILLYS-OVERLAND, INC., TOLEDO, O.

TOURING, $525 : ROADSTER, $525 : COUPE, $795 : SEDAN, $875 : *f. o. b. Toledo*

*"Overland, Always a Good Investment, Now the Greatest Automobile Value in America"*

in its mist of white was as unmoved as a quiet pool. The gift had failed. Christopher strode from the room.

Later when his anger had subsided he searched the palace for the little maid who had been so kind to him but she had disappeared. At sunrise he rode over the mountains alone.

When the second brother, Claudius, had arrived to take his brother's place, and with his retinue had banqueted on stuffed fowls and vegetables and juicy pies, he too was handed a note from the princess.

He tossed his brown head and laughed down at the pretty little maid who handed it to him.

"So the princess does not desire as my gifts laces and silks from the looms of Tralgar! I have a week, it seems, in which to produce a gift of my own. That is well indeed, little maid!"

In fact, Claudius was pleased with the words of the princess' note for he loved nothing so well as to paint upon canvas, and in this country where the glorious sunlight gilded everything there were a thousand beauties calling for his brush. He knew that the painting he would have ready at the end of the week could not help but move the heart of the Sun Princess.

And to put into eternal colors as his gift, he chose the home of Aurelia, the charming palace itself set like a spreading white flower in the green and sunlit valley.

(Continued Next Week)

## FILLING THE LUNCH BOX

By Mrs. Mack A. Haney

THOSE of us who put up lunches five times a week know how puzzled we feel sometimes as we ask ourselves the question, "What will I put in the lunch box today?"

I have found that it helps if an outline like this is kept in mind: sandwiches, beverage, fresh fruit, cookies or gem cakes.

Some mother has already said, "But you can't send a beverage with a cold lunch! But it is surprisingly easy—just use a pint bottle or make a permanent investment in the pint thermos bottles which cost less than a dollar. Then steaming hot cocoa can be sent as well as milk, and a lunch is ten times better when there is something to drink—don't you remember how dry our school lunches used to taste?

In packing sandwiches I have found the rolls of oiled paper to be bought at any grocery store invaluable. They keep the sandwich moist and prevent the filling from running out over the rest of the lunch. Then I always keep a store of white paper napkins on hand and fold one neatly ready for use at noon when the lunch box is opened.

Sandwiches may be appetizers or they may be unattractive depending entirely on how they are made. Thin slices of bread spread to the very corners with butter which has been stirred until it is creamy form the basis of all good sandwiches, and how different they look from hunks of bread spread with chunks of cold butter—no wonder some children throw their sandwiches away instead of eating them.

Then there are so many different kinds of fillings to use—these are some of my favorites: Cold beef, sliced thin, cheese, peanut butter with lettuce, dried beef, mashed and seasoned hard-boiled egg, nuts and cheese and salad dressing, raisins and nuts moistened with grape juice, lettuce, cold chicken, thick cream with white or maple sugar, jelly, jam, marmalade or preserves.

How we all love surprises! A surprise in the lunch box brings appreciation which more than repays the effort. Some day bake brown bread in round baking powder tins or cut the ordinary white bread into triangles or stars. Perhaps it is the same bread but Johnny will assure you that it doesn't taste the same.

Then slip in a piece of sweet chocolate or some candy the children didn't know you had made or fill the vacuum bottle with ice cream if it is a real red letter day like Mary Alice's birthday!

We Californians have stored away plenty of fresh fruit so that part of the lunch solves itself especially when we remember that "An apple a day keeps the doctor away."

Little need be said regarding what kind of cookies or cake to put in the lunch box for many lunches contain

Ready

No stopping "in the middle of everything" to make some chocolate sauce! Up there on your pantry ledge is the jar of Ghirardelli's Chocolate Sauce you made yourself. And how handy you've found it—as a last-minute "topping" for puddings and pastries, for iced drinks and sundaes and what not. Say "*Gear-ar-delly*" to your grocer and send for our recipe booklet.

**Easy to make:** Mix 1 cup sugar with 1 cup Ghirardelli's Ground Chocolate. Add ½ cup boiling water, ⅛ teaspoon salt, and cook 10 minutes or until thick. When cold, add 1 teaspoon vanilla. Store in tightly covered jar. This makes 1 pint of chocolate sauce.

# What Farm Boys Want in Food

**There are several ways to keep boys satisfied to stay on the farm. One way is to give them flavory, energizing food.**

The automobile, moving pictures, the telephone, and now the radio—all make farm life more enjoyable to the boy.

Add the foods he likes each day and you've made the attraction just about complete.

But that food must be more than merely tasty. It must be energizing, too. For those who work hard must have the sapped energy replaced.

### Rare Food Value in This Pie

No other dessert equals a luscious raisin pie made with big, plump, tender Sun-Maid Seeded Raisins.

Raisins furnish 1560 calories of energizing nutriment per pound—more of this kind of nourishment than eggs, meat or fish.

**Raisin Pie**

Two cups Sun-Main Seeded Raisins, 1½ cups boiling water, ½ cup sugar, 2 tablespoonfuls corn starch, 2 tablespoonfuls lemon juice, 1 tablespoonful grated lemon rind, juice of 1 orange, 1 tablespoonful grated orange rind, 1 cup chopped walnuts.

Cook raisins in boiling water for 5 minutes, pour into it sugar and corn starch which have been mixed. Cook until thick, remove from fire and add other ingredients. Bake between two crusts. Walnuts may be omitted if desired.

*All measurements for this recipe are level.*

*Blue Package (seeded) best for pie and bread.*

That's due to fruit sugar in the raisin. This sugar is practically predigested by the sun, so it revives a tired man almost immediately after eating.

Raisins furnish food-iron also—fine food for the blood. So these delicious Seeded raisins are both good and good *for* you.

Try the recipe for raisin pie printed on this page. Make it with your own delicious pie crust. The juice of the raisins forms a lucious sauce. You've never tasted better pie, nor has that boy of yours.

He wants delicious food like this that *energizes*.

Let him try it. See what he has to say. Add this touch to the other home attractions.

# *A "Gas" Stove for the Farm Home!*

How often have you sighed as you waited and waited for your oil stove to produce enough heat to cook and have things ready at meal time? How you have wished for a stove that would give you the comfort and conveniences of a city gas range! You can, now, have *that* stove—for the Coleman Cooker is a real gas stove for the farm home—or for any home not enjoying connections with good quality natural, or artificial gas.

**BOILS IN 4 MINUTES!**

Coleman Cookers will boil a kettle of water in 4 minutes. The heat is intense—a clear blue flame. It is clean heat—without smoke to crawl and dirty your utensils.

**BAKES IN 6 MINUTES!**

Cut your biscuits—put them in the pan, then into the oven. In six minutes they will be ready for serving—light, flaky and crispy-brown. No soggy, half baked bread or biscuits. Housewives everywhere who are using Coleman Cookers are enthusiastic in praising these wonderful stoves.

***Write for Name of Dealer Near You:*** Coleman Cookers are sold through exclusive representatives in each locality. If your nearest hardware dealer hasn't Coleman Cookers on sale as yet, write us and mention his name. We will arrange so that you may have a FREE DEMONSTRATION. The Coleman Cooker is easy to use. The generator lights with ordinary matches; then you light the burners as needed—"just like a city gas stove." Coleman Cookers make their own gas from common motor gasoline—the cleanest fuel of all. Made in several styles—High Cooker and Bungalow Cooker (gas plate). Write for full particulars. Address Dept. CA2

# Coleman Cookers

too much sweets and not enough of substantial food. Many teachers have told me that some children bring a greasy mixture of bread and butter with cold pork and doughnuts or pie for their dessert. No wonder these are listless, with dull eyes, for who of us would find such a cold lunch stimulating to the appetite? And energetic little bodies must have food for fuel just as an engine cannot run without coal.

Perhaps you would like the cake recipe which I use:

Plain Cake—Four level tablespoons butter, ½ cup sugar, pinch salt, 1 egg, ½ cup milk, 1 and ½ cups flour, 3 level teaspoons baking powder, 1 teaspoon flavoring (lemon or vanilla).

Gem cakes are most satisfactory for the lunch box because they are not so crumbly. But from this recipe, I do not always make just plain little yellow cakes. Sometimes I add chocolate; sometimes I use three egg whites in place of the egg and have white cake; the addition of spices makes spice cake; nuts for nut cake; or raisins, currants and citron for fruit cake. Even greater variety is possible for the frosting for we all have recipes for boiled icing, chocolate icing, caramel frosting, banana frosting, coconut frosting, brown sugar frosting, milk frosting and marshmallow frosting.

My favorite cooky recipe:

Sugar Cookies—One cup sugar, ½ cup butter, 1 egg, 4 tablespoons milk, 2 cups flour, pinch salt, 3 tablespoons baking powder, 1 teaspoon vanilla. Sprinkle sugar on top and place raisin in center of each cooky. Children also like rocks, peanut cookies, chocolate cookies and oatmeal cookies.

Occasionally it is nice to fill a cup or small screw top glass jar with some food and send it in the lunch box, but children usually object to carrying dishes of this sort. Some foods which may be sent in cups for a change include baked beans, canned fruits (pears, peaches, etc.), boiled rice, puddings, custard.

This is an excellent recipe for Queen's Pudding—Two cups stale bread crumbs, 1 quart scalded milk, ½ cup sugar, 4 tablespoons melted butter, ½ cup raisins, 2 eggs, pinch salt, ¼ teaspoon spice, 1¼ cups currants. Bake in moderate oven one hour; spread with jelly and cover with a meringue. Brown in oven.

Meringue—One egg white, 1 tablespoon powdered sugar, vanilla. Beat egg white until stiff, add sugar and flavoring.

An occasional cup custard will help to keep Mary Alice plump and rosy. Cup Custard—One egg, 1 cup milk, nutmeg, 2 tablespoons sugar, pinch salt. Bake in custard cups which are set in pan of hot water.

### THE SLEEPING ROOM

By A. M. H.

In view of the fact that the average person spends about one-third of his or her lifetime in sleep, we should be extremely careful as to the place in which we spend this time, and if cleanliness be next to godliness, in no place should its precepts be more rigidly observed than in the sleeping apartments of our homes. Some persons are so afraid of fresh air that they prefer to sleep in close and poorly ventilated rooms where the atmosphere is certain to be more or less pregnant with foul matter than to allow the fresh air to enter the apartment. They believe that night air is injurious, but fresh night air is never hurtful; on the contrary it is purer and more helpful to the lungs than the air of the day. To lose sight of the fact that we breathe as much while we sleep as while we are awake, and to exclude from the sleeping rooms the necessary air for the proper working and strengthening of the lungs is to fall into a most grievous error. We must never forget the fact that while the mind is dormant and the muscles of the body inactive during the period of sleep, the lungs are not so, and therefore we should always sleep in a pure atmosphere.

Everything in the sleeping room should be washable and easily kept clean and there is nothing better for keeping all things purely clean than borax water or hot borax suds as this not only cleans well but is a fine disinfectant. This suds is excellent for washing all kinds of bed coverings, pillows, curtains and floor coverings, for rinsing out slop jars and for keeping all things needed on and around the washstand in a sanitary condition.

After sickness in the family the bed,

# New Lamp Burns 94% Air
## Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

# Marvel Ant Exterminator
## I guarantee to rid your premises of ants

The time to permanently rid your premises of ants is in the fall and winter. My Exterminator is a slow acting poison that the worker ants eat and carry to the nests where the producing queens and males stay. A can on each ant trail does the work. Absolutely safe—the cans are always sealed, never opened. The ants crawl through small holes to reach the poison. 60c per can; 6 cans $3.00.

pillows and all covers used by the patient should be washed in the borax suds to make sure all disease germs are destroyed, for germ life may exist for months in places not properly cleaned. Many a person visiting a friend has had a serious spell of sickness and large doctor bills to pay because the guest room, the bed and bedding had not been well aired and there was not sufficient covering for the bed. Spare beds require thorough airing before being used as they collect dampness and there is no surer way of catching cold than by sleeping in a damp bed.

## HOUSEHOLD QUERIES

### Macaroni Salad—Spanish Beans

Please print a recipe for making macaroni salad, also some good recipes for cooking Spanish beans.—Subscriber, Bakersfield.

Macaroni Salad.—Break one-half pound macaroni into half-inch pieces. Boil about 20 minutes or until tender. Pour into sieve, rinse with cold water and put into mixing bowl. Add three hard boiled eggs, sliced, and half cup celery cut into short pieces. Cover with any preferred salad dressing and serve very cold. Here is an appropriate salad dressing: Mix together ½ teaspoon mustard, ¼ teaspoon salt, 1½ tablespoons sugar; add enough vinegar to make one-half cup. Pour this mixture slowly on well beaten yolks of 3 eggs, stirring constantly until thick. When ready to use thin with cream or evaporated milk to desired consistency.

Spanish Beans.—Soak one quart Spanish beans over night. Pour off water and wash clean; put on fire with enough water t cover, add pinch soda. Let come to boil and cook slowly 20 minutes. Pour off water and add 1 can tomatoes and enough water to cover. Add 1 bay leaf, 1 clove garlic, 1 onion with 7 cloves stuck in it, pinch sweet herbs, 1 tablespoon salt, 1 teaspoon sugar, 1 tablespoon butter and 1 tablespoon lard. Cook slowly 2½ hours then thicken with 1 teaspoon flour rubbed to thin smooth paste. Let cook 10 minutes longer.

Another.—One quart beans (dry). Cook till half done or more; one large onion, one red pepper, 1 slice bacon, ½ cup salad oil or olive oil, pinch black pepper, salt, ½ can tomatoes, large pinch Spanish herbs (oregano and comino) tied in cloth. Add everything named except salt, which add when about done.

## FRUIT BY-PRODUCTS

**By W. V. Cruess Before Placer County Fruit Growers at Auburn**

(Continued from Last Week)

THE bottlers of soda water are becoming interested in the production of real fruit beverages to replace the synthetic products which have "fruity" names but little fruit. Undoubtedly the time is ripe for placing on the market carbonated beverages (carbonated bottled soda waters) made from real fruit juices and at a price that is within the reach of the average consumer. Three years ago the university began experiments upon the preparation of such beverages. From the beginning the results were very promising in regard to quality of the beverages. The first experiments were made on a small scale and no data were obtained on costs of manufacture.

During the past and the present year machinery has been installed in our experimental factory for the production of the beverages on a semi-commercial scale and we now have data on the probable cost of the commercial production of the fruit drinks. We find that the cost of the fruit and the sugar for a bottle of loganberry or strawberry beverage is less than one cent. Orange syrup would be less expensive than the berry syrups used for the preparation of the new drinks.

We, therefore, believe that it is possible to make carbonated fruit beverages containing no artificial color or flavor and retailing for not in excess of 10 cents per bottle.

### Preparing the Syrups

In preparing carbonated beverages from fruits, syrups are first made and a measured quantity of the syrup is added to each bottle. The bottle is then filled with carbonated water as in regular soda water bottling practice. The manufacture of the syrup is, therefore, an essential part of the process.

In preparing berry syrups the fruit is carefully sorted and washed. It is then crushed and heated to 150 degrees Fahrenheit. It is then pressed and the juice is filtered. Heating extracts the color and increases the yield of juice. The filtered juice is sweetened with cane sugar until it will test about 50 degrees Balling by hydrometer. It is then pasteurized in bottles at 175 degrees Fahrenheit for 35 to 40 minutes and stored until it is to be used. We have found that strawberries do not have sufficient color of their own and that they should be mixed with one-half to one-third their weight of blackberries or that the syrups from these fruits should be blended in the same proportion as the above. We have prepared syrups from citrus fruits, pomegranates, grapes, strawberries, loganberries, raspberries, blackberries and raisins and have also prepared number of blends such as red grape syrup with orange and lemon, or with strawberry or raspberry, etc. An excellent punch syrup for carbonated bottled fruit punch is made by blending orange syrup, blackberry or loganberry syrup and lemon syrup. In the writer's estimation, this is one of the best beverages that we have produced.

### Bottling and Pasteurizing

You, as fruit growers, would perhaps be interested in manufacturing strawberry syrup for bottler's use, but would not, I imagine, desire to enter the bottling business for the wholesale production of soda water. You would manufacture the syrup and would sell it to the bottler, who would bottle it with carbonated water as he would any of the bottling syrups that he now uses.

Most of the fruit syrups that we have prepared are what is known as single strength syrups; that is, they are ready to use and are not to be diluted with sugar syrup before use.

One and one-half fluid ounces of the syrup is used to each bottle of eight ounce size. Water carbonated with carbonic acid gas to 40-50 pounds pressure is added to fill the bottle and the bottle is sealed. Automatic machinery is used in bottling, carbonating and sealing.

Fruit beverages will not keep unless they are pasteurized by heat or are preserved with sodium benzoate. We are opposed to the use of chemical preservatives and, therefore, advise pasteurizing as a means of preservation rather than using the chemical preservative sodium benzoate.

The bottles are sealed with the ordinary soda water bottle caps. They are then placed in water to completely cover the bottles and the water is heated to 150 degrees Fahrenheit for 30 minutes. This temperature does not injure the flavor of the juice and is high enough to kill the yeast cells that would otherwise cause spoilage of the beverage by fermentation.

### Sale of the Beverages

We offered 500 bottles of the beverage for sale at the last farm school picnic at Davis last April. These were

**Practical Eastern Farm and Estate Manager**

desires to settle in California or Pacific Coast. Has built and operated successfully four of the largest farms in this country. Thoroughly experienced in the handling of large herds of either Hereford or Holstein cattle. Well versed in all phases of herd sanitation, farm efficiency, soil conditions, etc. An expert poultryman, not afraid of work. Looking only for permanent location. Might consider operating large farm on shares, or on salary and commission basis. At liberty December first. Box 209, California Cultivator, Los Angeles, Cal.

## Protect Your Precious Teeth

In stormy weather your family is protected by rubber clothes and boots to prevent colds and other diseases.

In good weather or bad, the enamel of your teeth (the protective outer covering) needs to be cared for against the constant attack of decay. Mothers and school teachers should see that the teeth are brushed at least twice a day with a safe dental cream, to remove food particles in which the harmful decay germs breed.

The U. S. Public Health Service says that a dental cream should not contain grit. Harsh grit in a dentifrice may damage the precious protective enamel. You can be sure of a *safe* and sensible, non-gritty, drugless dental cream, suitable for *all* the family, when you buy Colgate's Ribbon Dental Cream.

## COLGATE'S

**Cleans Teeth the Right Way**

*"Washes"* and Polishes—
Doesn't Scratch or Scour

Colgate's contains a specially prepared fine chalk. It has no harsh grit, no strong drugs or chemicals. The refreshing, delicious flavor makes tooth brushing a pleasure.

More dentists recommend Colgate's Ribbon Dental Cream than any other dentifrice. Since 1806 Colgate has made reliable products which every farm family likes.

sold in less than three hours and the customers came back for more. It was a distinct hit with the visitors and the students.

We have had the beverages on sale at the university at Berkeley and at Sill's grocery, and at the East Bay Market in Berkeley and Oakland. The Faculty Club at the university is also serving the beverages. In all the sales have been satisfactory and are made up largely of repeat orders. The beverages are sold at the rate of 10 cents per bottle of 8 ounce size. The price is not objected to and is high enough to give a good profit to all concerned.

### New Drinks Healthful

These new drinks are especially healthful because of their large proportion of fruit juice and their freedom from chemical preservatives and artificial color and flavor. Fruit acids are beneficial and it is probable that the beverages are high in vitamins; particularly vitamin C, one of the very important substances found in orange and other fruit juices. Vitamin C will serve as an excellent talking point for the fruit beverages. Children may drink as much of these beverages as they desire without fear of discomfort or illness.

### Fruit Butters and Jams

Pears and plums can be made into excellent butters and spreads, jams, etc., by equipment in use in jelly and jam factories. We have found that Bartlett pears yield a very pleasing product which we have called "Pear Spread."

Pear spread is made by crushing the fruit; boiling it in water until tender; pulping and finishing in a tomato pulper until all of the seeds and most of the stone cells have been removed, followed by cooking the pulp to a buttery consistency with sugar, spices, and lemon juice. Undoubtedly pears and plums could be blended to good advantage. The tart flavor of the plum would be a desirable addition to the flat sweet taste of the pear.

During the past season Mr. Irish, of our laboratory, converted two tons of cull Sacramento River pears into pear spread, according to the following formula: Pear pulp, 1,000 pounds; sugar, 500 pounds; lemon juice, 6 gallons; cloves, 1 pound; cinnamon, 1 pound; ginger, 1 pound.

The sugar was added to the pulp and the mixture was boiled to 218 degrees Fahrenheit. Lemon juice was then added and the mixture boiled to 219 degrees Fahrenheit. Spices were then added and the mixture was boiled to 220 degrees Fahrenheit. The resulting product was sealed scalding hot in jars and cans.

The spread is of rather thick consistency and of spicy flavor. It is an excellent spread for hot bread; biscuits, hot cakes and is suitable for filling in certain kinds of cake. It is now on sale at the university and has created a favorable impression.

In my estimation, a considerable quantity of this and similar fruit spreads made from pears, plums, peaches could be made at your cannery in Lincoln, or at other suitable point, and sold to advantage. It must be realized, however, that the market for fruit jams, jellies, preserves and butters is limited, and that it would probably be impossible to find a market for all of the product, if the entire available supply of cull fruit were converted into spreads and butters.

### Fruit Candies

It is said that the American public consumes over 500,000 tons of candy annually. Most of this is made up of sugar. Most of it is very rich and a small amount suffices for the average consumer; i. e. one's candy appetite becomes saturated quickly. If it were possible to substitute in candy a large proportion of fruit for the sugar now used, it would not only provide an outlet for our fruit, but would also make candy more healthful and make it possible for us to eat more candy without discomfort.

With these purposes in mind, we have developed at the university a line of fruit candies consisting principally of fruit. The fruit pulp is concentrated to a jelly like consistency and is then moulded or cut into pieces of suitable size for dipping in chocolate. Peach centers, plum centers and plum pear centers have been very satisfactory and those who have eaten them pronounce them superior in flavor and texture to the usual cream centered chocolates.

We have also made these candies in commercial quantity and have placed them on sale. They have been well received.

Dried and dehydrated fruits lend themselves well to use in fruit candies.

We are convinced that the use of fruit in candy is destined to become a very important outlet for California fruits.

### Other Products

Denatured Alcohol—Denatured alcohol will not pay; the yield from fruit is too small; the gross return would be less than $5 per ton.

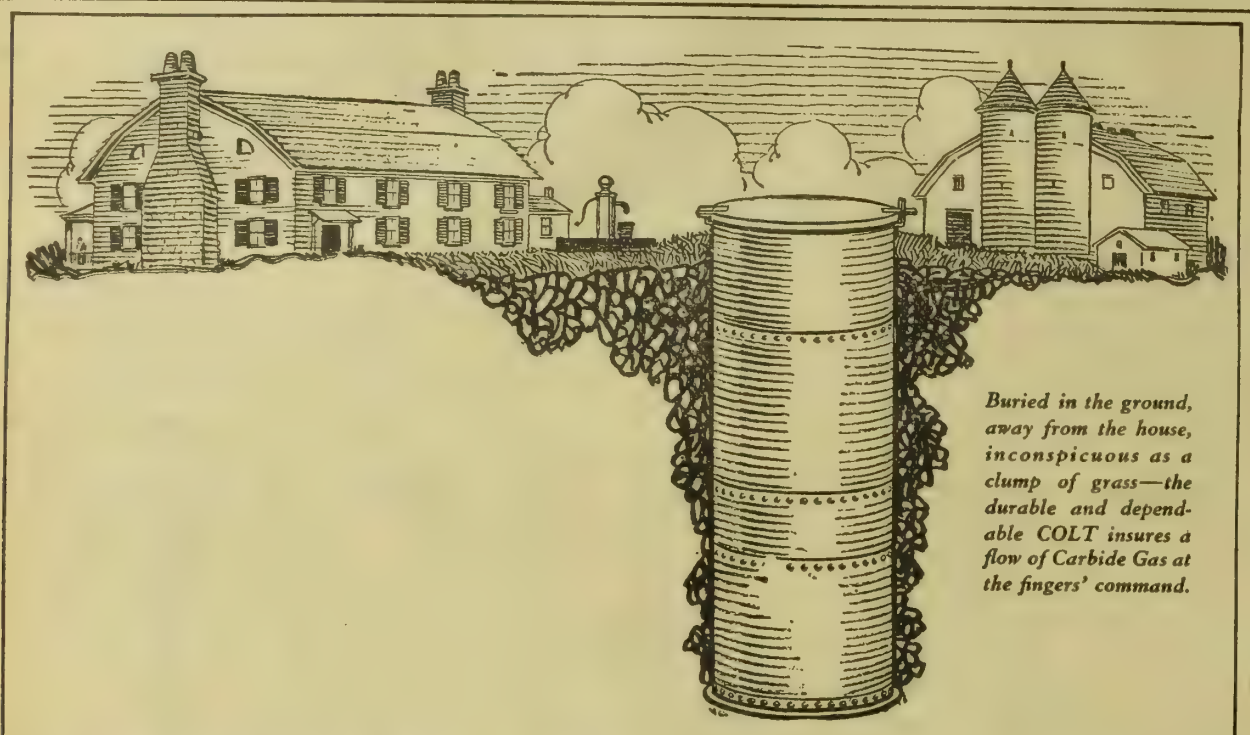
Vinegar—Vinegar is a cheap by-product for which the peels and cores and fruit unsuitable for dehydration or other purposes could be used. A ton of pear cores and peelings will yield about 125 gallons of vinegar, worth about 15 to 20 cents per gallon.

Pit Products—Fruit pits are now used in limited quantity at San Jose for the manufacture of carbon. Apricot and plum pits are suitable for the manufacture of bitter almond oil used as a flavoring and for sweet oil for table and cooking use, or for use in face creams, etc. Macaroon paste is a by-product from the oil manufacture.

Fruit Wafer Filling—We have found that fruit pulp can be converted by suitable means into a jelly-like product and canned for the use of housewives in the garnishing of salads, for the preparation of candies and for sandwich fillings.

Study Your Problem—Other products will suggest themselves to anyone who may give earnest thought to the problem. It is my belief that it is high time that the growers of this district should study the utilization of their cull fruit and make immediate plans for development of a by-products industry.

Try Dehydration First—It is my advice, however, that you go slowly and do not attempt to cover too many products at first. I would recommend first for your study and attention the dehydration of your surplus fruits. This is probably the most profitable field for your consideration, insofar as we are able to judge with our present insufficient data.



*Buried in the ground, away from the house, inconspicuous as a clump of grass—the durable and dependable COLT insures a flow of Carbide Gas at the fingers' command.*

# Plant a COLT "Gas Well" on your farm NOW!

The months of short days and long nights are on their way.

Six months of evenings to be passed indoors await you!

Will they be lighted by the dim, eye-straining flame of a lamp—or the soft, friendly brilliance of *real* light—CARBIDE GAS LIGHT?

Act *NOW* for *real* light! Get a COLT Lighting and Cooking Plant—generate this wonderful Carbide Gas.

Hundreds of farmers are preparing this month for bright, cheery evenings by installing COLTS. This is the great planting season for COLTS. More are being installed this Autumn than in any other season. Don't risk disappointment—order your COLT *now,* before Winter closes in.

## The Health Light for Reading

Carbide Gas Light is *pure white* in color—not *yellow*. Looks exactly like sunlight—restful and soothing to the eyes. Read or sew under it for hours—no eye weariness. The most beautiful as well as the most healthful of artificial lights.

Comes to you at the twist of fingers. Turn a little igniter. . . . . on goes the light! You use no matches.

Carbide Gas for cooking, too—*an added feature of the COLT.* Your wife will certainly appreciate this.

How is the gas made? The COLT does this automatically—mixes Carbide with water.

## Study Lighting Plant Costs. Result: You'll Install a Colt

Easy to install—within reach of all. No continual replacement of parts, no adjusting or tinkering necessary, no service required—simplicity itself. The most economical system all the way thru. Comes from Factory to Farm. Sold direct by COLT solicitors—no distributors or dealers to take a profit.

## Send Postcard for Full Story

You want *good* light—you want it installed now. Write for full particulars—*then act for BETTER LIGHT!*

31ST SUCCESSFUL YEAR

# Livestock at Riverside

By Jack Klein

LIVESTOCK at the Southern California Fair was slightly shorter in numbers than last year, but the quality was generally very high. Stock which at the state fair had not been in the money showed the results of care and training since that time and often upset the dope.

As is usual, this year's show was generally as strong or stronger than the state fair in dairy cattle and some breeds of hogs.

On account of the approaching show at San Francisco no beef cattle of importance were present, a small herd of Shorthorns shown by the Palomar Ranch being the only entry. These were all range animals and did not bring out the superior qualities of the beef animals as the regularly fitted show herds do.

The rigid enforcement of the rule against showing reacting or non-tested animals may have had some effect on the numbers of all breeds shown, but everyone who was there was anxious to produce his certificate of health and was high in his praise of the show for enforcing his rule. Many of these men have applied for federal accredited herds and they cannot afford to take chances on having their best animals infected by contact with reactors.

The Holsteins were most numerous and many fine animals faced John B. Irvin of Minneapolis who tied the ribbons. Mr. Irvin was loud in his praise of the type and quality of the showing in most of the classes.

The bulls were placed as at the previous fairs, and the Berylwood senior yearling, Prince Aaggie of Berylwood, was made grand champion only after the most grueling test. Hartsook's Major Korndyke Pontiac Fobes was made senior champion over his two year old full brother, King Korndyke Pontiac Mona, shown by Frampton Brothers.

Thirteen of the finest aged cows ever shown in the south competed in that class. Practically all had high 7 day records and many also had big yearly records. Bessie Snowball De Kol showing dry was choice for first place with Iris De Kol Canary, one of the high cows of the Maxwell sale second.

Parthenia Paul Segis 2d, a grand champion last year, was third, and Ava Model Hengerveld 2d, the grand champion of every other big show this year, was fourth. This cow is carrying considerable age and the end of the show season finds her a little shy of the wonderful quality with which she started. All of the first cows have excellent records and all belong to Fred Hartsook.

In the two year olds the Sierra Vista Stock Farm produced a wonderful heifer who was head and shoulders above the rest of the class.

An outstanding class in the show was the junior yearlings which was finally won by Hartsook's heifer Carolina Wayne Fayne. This heifer was a sensation last year but has not quite suited the judges this season although she has always been in the money.

A new member of the show fraternity, W. R. Elliott, brought out some dandy heifers and won first and second in the senior yearlings with daughters of K. P. O. P. Jr. who is siring fine calves.

The Jersey show was notable for the consistency with which F. W. Atkeson of the University of Idaho followed and demanded breed type. The Waterloo Jersey Farm bull who was grand champion of the state fair was again the top male.

The aged cows brought out some wonderful animals but the interest was all between Salome of Mossdale owned by Jim Thorp and Imp. Golden Lustre owned by F. R. Bain. Salome is practically undefeated after a long life of showing but age is causing her to be a little rough and the wonderful four year old was put over her after much deliberation. The judge was kind enough to explain fully why he did this and every one seemed to see his point. Both are high record cows.

Thorp and Bain split the ribbons pretty evenly.

The Guernsey show numbered over fifty and all were good ones. The Italian Vineyard Company's great two year old defeated the heifer owned by Humphrey which was champion of the state fair. The Humphrey's heifer which was a wonder at the previous meeting has lost some of her bloom while the Vineyard Company entry has been getting better all the time. She was made grand champion over the aged cow and a fine three year old. Nobleman of Maple Hill owned by Humphrey was again grand champion and two entries sired by him were 1-2 in the get of sire.

A calf sired by Masterpiece of Edgemoor was junior champion bull and was favored by the crowd for grand champion.

Ayrshire competition was keen between well balanced herds shown by Alex MacMinn of Corona and the H G Ranch of Santa Barbara County. The MacMinn herd has been somewhat depleted by sales of show animals and the H G herd won most of the blues. Two entries of get of sire by one bull brought first and second to MacMinn.

The hog show was of high quality in all breeds though the numbers were lower than before.

The Berkshire show numbered nearly 150 head and the fight for honors was keen. Escalon Big Joe, owned by Humphrey could not be stopped for the championship of the boars and Violets Festline the unbeaten aged sow of the Italian Vineyard was in her usual form. Guasti's Rival, the great junior yearling, was again reserve grand champion.

Riverside is very close to the center of Berkshire activities in this state and the interest in the showing was keen. Mr. Wyman Lovejoy who is nationally famous as a hog judge made the placings and was much gratified over the show in all classes and breeds.

In the Duroc show the Charnock Ranch of Hemet and J. E. Thorp divided most of the firsts. Charnock had champion boar and Thorp champion sow. Sierra Vista Ranch of Perris won many ribbons with a small herd. In the futurity J. E. Thorp won the blue on both boar and sow pigs and on litter.

**Guernseys**

Bull, 3 years—1, Nobleman of Maple Hill Farm, A. B. Humphrey, Escalon; 2, Itchen's Daisy's Butter Boy of Revada, W. H. Rapson, Corona; 3, Reliance of Edgemoor, Russell S. Cox, San Marcos; 4, Cherubs Sunny Jim of Kirta, Italian Vineyard Co., Guasti.

Bull, 2 years—1, Carl E. King of H. H. F., Italian Vineyard; 2, Brilliant May Secret of Edgemoor, Cox; 3, Caesar of Frankland's Royal Lad, E. O. Tucker, Saticoy; 4, Lone Tree Actor, Rapson.

Bull, senior yearling—1, Escalon Princess White Face; 2, Escalon Favorite, Humphrey.

Bull, senior calf—1, Escalon Archer; 2, Escalon Golden Noble; 3, Escalon Archer, Humphrey; 4, Ruben L. King of H. H. F., Italian Vineyard.

Cow, 3 years—1, Revada Princess Pat; 2, Rosie E. King of H. H. F.; 3, Imp. Fan of Richleigh, Italian Vineyard, 4, Phillys of Mayhews, Humphrey.

Two years—1, Caroline E. Langdon of H. H. F., Italian Vineyard; 2, Mayhew's Bonnie Lassie, Humphrey; 3, Lilla of Navarino, Italian Vineyard Co.; 4, Brittania E. King of H. H. F., Italian Vineyard.

Cow, senior yearling heifer—1, Escalon Nancy; 2, Escalon Pearl, Humphrey; 3, Carmeleta of Climont, Italian Vineyard; 4, Rosomea of Twin Oaks, Cox.

Cow, junior yearling heifer—1, Escalon Joan, Humphrey; 2, Cherubs Daisy of Castleview, Italian Vineyard; 3, Laura of Claremont, Rapson; 4, Escalon Naomi, Humphrey.

Cow, senior heifer calf—1, Guasti's Violet, Italian Vineyard; 2, Glen Bell of Sycamor Nancy, Cox; 3, Escalon Pollyanna; 4, Escalon Lottie, Humphrey.

Cow, junior heifer calf—1, Escalon Beauty; 2, Escalon Valentine, Humphrey; 3, Pearl of Sycamore Ranch; 4, Nell of Sycamore Ranch, Cox.

Aged herd—1, Italian Vineyard; 2, Humphrey.

Breeder's young herd—1, Humphrey.

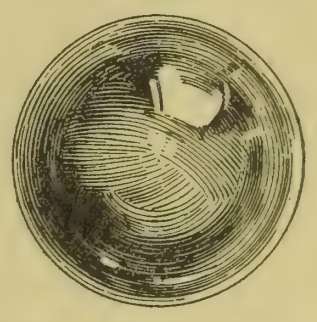
Calf herd—1, Humphrey; 2, Cox.

Dairy herd—1, Italian Vineyard; 2, Humphrey.

Get of sire—1, get of Nobleman of Maple Hill; 2, get of Nobleman of Maple Hill, Humphrey; 3, get of Effie's King of Hollow Hill Farm, Italian Vineyard.

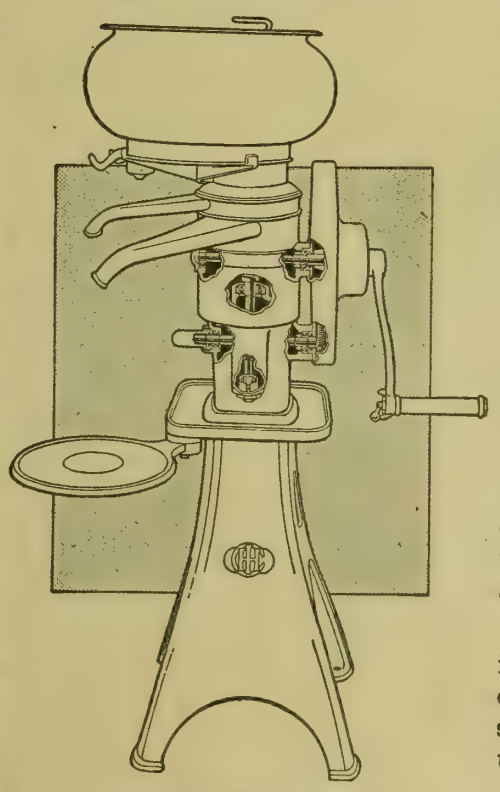
# Now—BALL BEARINGS in the larger PRIMROSES!

*The Highest Development in CREAM SEPARATOR Construction*



For forty-five years dairymen have struggled with hard-turning cream separators. Excessive friction caused them much trouble in the hand operation of the machines. Now the cream separator engineers of the Harvester Company, with this problem constantly in mind, and the satisfaction of the operator at stake, have designed and constructed a Ball-Bearing Primrose Cream Separator which reduces the power required to operate by approximately 35%.

In this latest Primrose, the ball bearings are located at points where the resistance is greatest in the operation of all makes of cream separators.



NEW PRIMROSE No. 5

BALL BEARINGS make it easy to operate this big 1,100-lb. capacity Primrose *by hand.* Cut out to show the six ball bearings on crankshaft, on pinion shaft and on spindle.

The Ball-Bearing Primrose is in no sense an experiment. It has been tested and proved a remarkable improvement in the hands of thousands of farmers and dairymen in New York, Wisconsin, California, Minnesota, and other dairy sections of the United States. The unanimous decision of all users is that it represents a development which has long been needed, especially in territory where large machines are in use, and where more would be profitably used were it not for the hard turning of the plain-bearing machines.

The International Harvester Company's broad and liberal guarantee stands solidly behind this product. Primrose deserves its high reputation, not only for its recovery of the greatest amount of butter fat when operated as instructed, but for its ability to do so with less labor.

The Ball-Bearing Primrose is one of the products in the McCormick-Deering line of farm operating equipment. It may be seen and studied at the store of your McCormick-Deering dealer. Write us for catalog if you prefer.

INTERNATIONAL HARVESTER COMPANY

Reserve grand champion bull—Carl E. King of H. H. Farm, Italian Vineyard.

Reserve grand champion cow—Revada Princess Pat, Italian Vineyard.

## LIGHT AND POWER

(Continued from Page 419)

top the flow of water. He pressed the button which started the motor which closed the gate at the top. The waters, however, continued their downward course leaving a complete vacuum at the upper end of the pentock where the steel construction is lighter than at the bottom, in fact it was not equal to resist the air pressure and instantly collapsed.

The Southern California Edison Company not only has this development in charge but has other plants in other systems located on the Kern River, Kaweah River on Mill Creek, Santa Ana River, Lytle Creek, at Azusa, at Fontana—all told a capacity of 249,600 horsepower. Steam plants are located at Long Beach, Redondo, Visalia, Santa Barbara. These steam plants have a capacity of 127,100 horsepower. As developments are finished on the Big Creek system the total capacity will be increased to far above a million horsepower.

Besides the Southern California Edison Company, other corporations in California developing and distributing hydro-electric energy are Pacific Gas and Electric Company, one of whose plants was shown in last week's Cultivator and fully described by Mr. Boyd, the Great Western Light and Power Company, the San Joaquin Light and Power Company, the Southern Sierras Power Company, the California and Oregon Company. These companies are observing a cooperative spirit in the matter of interchange of current. That is, in case of shortage or accident calling for a new source of supply the lines have been so connected that one company delivers to another sufficient to meet immediate requirements. Besides, some municipalities like Los Angeles, Alameda, Palo Alto and Redding have made developments, and still others, as in the case of San Francisco, have them under way. This all has resulted in Californians enjoying greater hydro-electric development than any section in the world. Distribution lines have been carried to most remote sections of the state, especially have rural homes been given the advantage of light and power.

California is wonderfully blessed in its opportunities for hydro-electric development, and while the value of this source of power is appreciated to an extent by us all a trip into the heart of the Sierra and seeing electricity in the making is necessary to give one a correct idea of the wealth which has been going to waste since time began. Such a view of the work now being done to conserve and make available this great force also gives adequate idea of its permanence as has been expressed by Vice-President and General Manager Ballard of the Edison Company: "Here is a force ready for the service of mankind as long as nature functions."

Already this state produces 21 per cent of the hydro-electric power generated in the United States. It is said that this state and Oregon and Utah are the only states conducting their manufacturing and transportation without a single ounce of coal. In 1921 California produced 3,227,261,000 kwh. of hydro-electric power, thus passing New York which prior to that had been the first state.

A number of Californians recently made a tour of inspection of the Big Creek power houses. The party was in direct charge of Manager Ballard of the Southern California Edison Company. Mr. Ballard was assisted by Fred B. Lewis, assistant manager of operation; Clifton Peters, secretary of the company; All Around General Helper and Assistant Charles Pierson, all from the home office. At Big Creek, or Cascada, were Dave Redinger, resident engineer; E. R. Davis, manager of construction; R. B. Lawton, local superintendent in charge of operation, and Mark Gunderson.

## ANNUAL MEETING OF NATIONAL GRANGE

The annual meeting of the National Grange for 1922 to be held at Wichita, Kansas, opening on November 14, will be devoted largely to the consideration of great national questions affecting agriculture and to a few questions of policy, affecting the National Grange ittself.

Prominent on this list will be necessity for reducing taxation, ship subsidy, does agriculture need a new credit system, the problem of surplus production, radicalism and how to curb it, better and cheaper transportation, and stricter prohibition enforcement.

Among the Grange policies to be taken up will be the proposed addition of a mutual life insurance to the Grange organization, necessity for cheaper automobile insurance, Grange extension into new territory and the increase of its educational and publication activities.

At the last census there were 4,291,000 acres of irrigated land in California, 22 per cent of the irrigated land in the United States. Invested in irrigation enterprises in California is the sum of $194,000,000, a most substantial fraction of the nation's total, $697,000,000.

# Mammoth Dispersal

## 300 Holstein Cows and Heifers

## October 26-27

## Minor & Thornton Herd, Fresno, California

About 90 of the cows in this sale are registered Holsteins, the balance will be sold as grades, although in fact about 90% of them are purebreds.

**100 Milk Cows**
**100 Bred Heifers**
**100 Open Heifers**

Among the 100 cows are many fresh cows and heavy springers, and the 100 bred heifers also include many heavy springers.

ALL OF THE MILK COWS SELL TUBERCULIN TESTED

This is a wonderful opportunity to buy real Holsteins. The Minor & Thornton farm has been sold, and the cattle must be off the place by November 1.

PLACE OF SALE: The Minor & Thornton Farm is 14 miles southwest of Fresno on Muscat Avenue, 2 miles west of Coalinga Road.

TERMS OF SALE: Responsible parties may arrange terms of one-third cash balance in three, six and nine months, if arrangements are made before sale with California Breeders' Sales and Pedigree Co.

Remember the Date and Be There to Get Your Share of the Bargains There Will Surely Be in This Big Sale.

# Absolute Dispersal

## Arthur & Maxfield Holstein Co. Herd

## 70 Registered Holsteins 70

## at Public Auction, Wednesday, November 15, 1922

Kings County Fair Grounds,
Hanford, California

To terminate the existing partnership between J. W. Arthur and Wm. G. Maxfield their splendid herd of registered Holsteins will be sold to the highest bidder at public auction.

This is an unusually attractive herd of cattle, among some of their accomplishments the following are noted:

HIGHEST PRODUCING purebred herd in Kings County Cow Testing Association, with an average of 439.23 lbs. butterfat from 13,595 lbs. milk on 21 head, in a ten months' test.

HIGHEST 7 DAY RECORD in Kings County, over 33 lbs. butter on official test.

HIGHEST 365 DAY SEMI-OFFICIAL RECORD in Kings County, with over 1,100 lbs. butter.

HIGHEST PRODUCING COW in Kings County Association, with 702.6 lbs. butterfat from 20,375 lbs. milk in ten months.

THIS ENTIRE HERD HAS PASSED TWO CONSECUTIVE TUBERCULIN TESTS WITHOUT A SINGLE REACTOR.

If you want high producing cows, or heifers and bulls from such cows, make your plans now to attend this sale. It is a choice herd of cattle in excellent physical condition.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who arrange for terms prior to sale with California Breeders Sales and Pedigree Co.

Management

**California Breeders Sales and Pedigree Company**

C. L. Hughes, Sales Manager, Sacramento, Calif.

### SHEEP ARE COMING BACK

Lamb shortage has arrived and with it new interest in sheep. Last September a bunch of 4,000 sheep sold with difficulty after $1 freight expense and $4 feed bill, for the munificent sum of $2 per ewe, $2.50 per lamb and $3.25 per yearling, and they were good ones. Their wool brought less than shearing cost.

This bunch was shipped to Southern California from Phoenix one year ago during the drouth. A year before they sold the ewes were on a $15 basis, lambs on an $8 basis and yearlings on a $10 basis with wool at 60 cents.

Today those identical ewes would bring from $7.50 to $11 f. o. b. range, the lambs $7, the yearlings $8 and still better in the east. Lamb receipts have been below par.

Sheep have been decreasnig though sheep slaughter has been increasing even during the past year of 1921. Wool is on a 40 cent price base.

The sheep men have hopes and while not yet out of the woods, in districts have had good lambing and are sure of plentiful grass. Day has apparently dawned for them at last. Their hard period lasted about a third of the time cattle have been down, for the drop hit them a year later and they have recovered first. Many are broke, more from expense and drouth loss than low price, but those who are still in the business have a chance for a rapid recovery.

While the sheep business does not yet offer finance the same attraction as foreign investment, with the U. S. dollar and exchange making possible the purchase of a $20,000 Berlin building for $2,000, it may yet prove attractive. Europe offers tremendous values for a small sum as we know it, but after all there is nothing like investment in home staples for safety.

### HOW BUTTER IS RATED

If you are a producer or manufacturer of butter were you disappointed in the price you received for that last shipment? Quality is the chief factor in determining butter prices, and according to United States department of Agriculture Circular 236, Defects in Quality of Butter just issued, even small defects in quality may result in the loss of a sale or the cut in price. The circular may be had by writing Department of Agriculture, Washington, D. C.

Several million dollars annually are lost to producers and manufacturers because of imperfect conditions and methods in the production, manufacture and marketing of dairy products, the circular states. During 1920 the marginal difference in the prices of high and low quality butter amounted at times to as much as 15 cents between 87 score and 92 score. Lack of proper attention or care in the creamery in grading the cream, or in churning, working, salting or packing the butter are stated to be mainly responsible for this condition.

The circular enumerates and describes the various factors such as flavor, body, color, salt and package that influence price. These factors are given specific ratings by local and federal butter inspectors, and receivers, in determining the final score of the product, and the ratings are governed by the absence or presence of certain defects described in the circular.

It is stated that there has never before been a time in the history of American butter making when it paid so well to produce high quality butter as during recent years. But to secure an active demand and the largest net return not only high quality and uniformity of the product are necessary, but a knowledge of market requirements and good marketing methods are required.

---

More than half of the milk of the 27 counties of the Chicago zone will be marketed cooperatively, as the result of the success of the marketing plan of the reorganized Chicago Milk Producers Cooperative Marketing Company. The new contract had 6,347 signers on September 9.

---

Colts, calves, lambs and pigs, all should have special feed set apart for them as soon as they can be coaxed to eat. Oats are very good.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Corning System

What is the average floor space per hen required by the Corning system for flocks of 100 or more? When concrete floors are used is a dust box provided?—Subscriber, Arcadia.

There seems to be no fixed rule for floor space per hen, but it ought to be at least 3 square feet per hen when hens are kept confined to the house. A house 16x20 is a good size for 100 hens. When concrete floors are used, they should be covered with sand, in which hens can dust themselves fairly well, but it is better to provide a dust box also. The regulation way of treating concrete floors is to cover first with sand, then with straw or other litter, which makes a scratching shed of the house. I am told that concrete floors are not proving satisfactory as was at first expected. They are clean and rat proof, but it takes a great deal of sand and straw to cover them so they will not be cold and hard to the feet of the hens.

### Enlarged Crops

My Bourbon Red Turkeys are dying from enlarged crops. I have tried draining out the crop, but it only prolongs their illness. Can you give me any cure or preventive?—Subscriber, Los Molinos.

Enlarged or pendulous crop is believed to be due to errors in feeding. Either the little turkey has been allowed at some time to stuff its crop till the tissues were stretched too far to return to their normal condition, or feeding has been irregular or the feed too bulky. You may be able to help this condition with a snug bandage which will support and yet allow the turkey to eat all it needs, but the only certain way to cure it is to cut out a piece of the tissue. Clean off the feathers and wash the skin, then with a sharp knife cut out of the crop a diamond or oval shaped piece of tissue about 2 inches long and 1 inch wide. Then sew up with 3 or 4 stitches of white silk or No. 100 white cotton, sewing the inner and outer membranes separately. This is a rather delicate operation for the amateur and should not be undertaken except as a last resort.

### Liver Trouble

My White Leghorns get droopy, their combs become yellow, their legs and necks weak several days before they die. What can I do for them?—Subscriber, Riverside

These yellow combs nearly always indicate liver trouble due to an unbalanced or too heavy ration. Keep green feed before them constantly, and make the ration lighter by adding bran. If many of the flock are affected it would be well to drop the laying mash for a time and give bran alone. Once or twice a week, for a couple of weeks, feed a moist mash into which Epsom salts, ½ teaspoon for each bird, has been mixed.

### Tape Worms

Our Plymouth Rock chicks, eight weeks old, are drooping and dying. Examination shows the intestines full of flat tape worms. They have had chick scratch, growing mash, sour milk and lots of worms in a patch of moist soil, but not sufficient green feed. Can lack of greens be the cause of the tape worms?—Subscriber, Fallbrook.

There is a certain kind of tape worm which is produced in chickens by eating earth worms. Doubtless those that infest your chicks are of this kind. Lack of green alone would not produce them, but lack of green, in connection with the great number of earthworms eaten would be a contributing cause. The first thing you have to do is to keep the earth worms away from the chicks. The easiest treatment is pumpkin seed, chopped or ground to the size of cracked corn or smaller if the chicks do not eat them readily. Let the chicks go without supper and breakfast, and about 9 o'clock set the pumpkin seed before them. Let them eat all the forenoon, and at noon give a small quantity of moist mash in which ¼ teaspoon of Epsom salts for each bird has been mixed. If this does not have the desired effect, repeat after a few days. If the pumpkin seed does not do the work you may have to try male fern in 30 grain doses or areca nut powder in 30 grain doses made into pills with butter, but the pumpkin seed treatment is much more simple and likely to be just as effective. You will probably have to move the birds to fresh ground to prevent reinfection.

### Breeding Males

How old should cocks and cockerels be to secure best results? Is it best to put old roosters with pullets and young roosters with old hens? Will fertility be good while hens are molting?—Subscriber, Claremont.

The general practice, except when line breeding demands other matings is to mate as you say. A cockerel nine months old is generally ready for breeding, and sometimes a younger bird may be used with good results. I cannot say just how many years a male may be used. It depends on the bird. Very few poultrymen use a male more than two or at the most three seasons, but some might be used considerably longer. The only way to be sure about fertility is to test the eggs yourself. As a rule fertility is not very good while the hens are molting.

### Extensive Turkey Raising

Please send me any information you can on extensive turkey raising.—Subscriber, Los Angeles.

This question has been taken up in several articles. The main difference between extensive and intensive turkey raising is, that turkeys on range require less feed than those which are confined, the amount of green and grains required depending on the character of range. Birds that are on alfalfa all day need only a meal of wheat and barley at night until near fattening time, when corn and a little mash of some kind should be added. This does not apply to the poults which are hand fed three or four times a day for two or three weeks. Turkeys that are on range only part of the day should have bran before them part of the time. Oyster shell and milk are a valuable part of the ration of all turkeys.

### NATIONAL EGG LAYING CONTEST

Mountain Grove, Missouri: The 300 hens in the eleventh national egg laying contest laid 3,711 eggs during September, an average of 12.37 eggs per hen. Pen White Wyandottes, owned by Warwick Rogers, Market Drayton, Salop, England, won cup for September by laying 104 eggs.

Number of eggs laid by breeds for month and to date are: Plymouth Rocks, 762, 9820; Wyandottes, 702, 9692; Leghorns, 512, 9431; miscellaneous varieties, 604, 9285; Anconas, 644, 9273; Rhode Island Reds, 487, 8072.

Ten leading pens for September: White Wyandottes, England, 104; S. C. White Leghorns, Washington, 101; Barred Rocks, New Jersey, 99; Barred Rocks, Michigan, 96; White Wyandottes, Missouri, 93; White Wyandottes, England, 92; Barred Rocks, Indiana, 91; S. C. Anconas, Michigan, 89; R. C. Rhode Island Whites, Illinois, 89; R. C. Rhode Island Whites, Missouri, 86.

Ten leading pens to date: S. C. White Leghorns, Washington, 1229; White Wyandottes, England, 1196; White Wyandottes, England, 1182; R. C. Rhode Island Whites, Missouri, 1133; Barred Rocks, Missouri, 1131; Barred Rocks, New Jersey, 1105; S. C. Anconas, Missouri, 1078; R. C. Rhode Island Whites, Missouri, 1076; S. C. White Leghorns, England, 1073; Barred Rocks, Indiana, 1070.

### CALIFORNIA EGGS IN NEW YORK

"Approximately one-half of the eggs sold to the most select markets of New York are shipped from the Pacific coast," said Earl W. Benjamin, manager of the New York branch of the Pacific Egg Producers, in speaking before a large audience of Stanislaus County poultrymen last week.

"About 15 per cent of the eggs placed on the New York markets are

(Continued on Page 439)

## We Guarantee 100% Fertility in All Hatching Eggs

By Replacement of Infertile Eggs

We are now booking orders for hatching eggs and baby chicks from Emerson & Martin exhibition W. Leghorns, also the heaviest egg-laying strains in America and England. It will pay you to arrange for yours now. Make a 10% payment and know that you will have them when you want them.

Our heavy commercial egg-laying hens are mated up to males from Emerson, Martin, Tancred, Hanson of Oregon, Hollywood Farms of Washington, Barron, Fergiss and Hillview Farms of Illinois. Why don't you arrange for some of each. Let us toe punch the chicks and see which produces the type of hen you like best?

# Extraordinary Draft Sale!

## 60 Registered Holsteins

## Friday, November 10, 1922

## Meadhart Breeding Farm

## Fred Hartsook, Lankershim, Cal.

Unbiased authorities concede that Mr. Hartsook has assembled what is possibly the greatest herd of registered Holstein females in America ever secured by a single breeder as foundation material.

Every animal that has gone into this herd has gone in strictly upon the basis of individual merit, and price has been a secondary consideration in securing such animals.

That being true there has never arisen a need to cull the herd because of ill advised purchases, and the present offering is the first of a regular series of draft sales through which the surplus breeding animals will be offered to the public.

It may be noted here that the herd now contains over 300 head of registered females, a larger number than the plans of Mr. Hartsook contemplate, and from now on the size of the herd will be regulated by regular public sale offerings of high class cattle.

THE PRESENT OFFERING WILL INCLUDE COWS WITH LARGE 7 DAY AND YEARLY RECORDS, DAUGHTERS OF SUCH COWS, AND EVERY BRED FEMALE IN THE SALE IS BRED TO SIR AAGGIE DE KOL MEAD, THE $30,000 SON OF MISS VALLEY MEAD DE KOL WALKER.

Think of the wonderful opportunity presented in this offering to secure such females bred to such a bull!

Detailed announcements will appear later. Write for catalog now.

### BEANS

California Lima Bean Growers Association, October 7:

Market continued upward trend and Friday, October 13, buyers were paying growers in the neighborhood of $7.00 for rgular Limas and as high as $7.65 for Baby Limas. This means shipping prices f. o. b. common shipping points, $7.25@7.45 on Limas, around $8.00 on Baby Limas, although whhen this is written the selling market on Baby Limas had not yet become established on this basis. Another week of favorable weather will see practically all Limas and Baby Limas threshed and delivered to warehouses, when it will then be possible to check total production. Shipments going forward rapidly, heavy shipments must continue to care for business booked and coming in daily.

## Snappy Notes on Livestock

By A. L. Spellmeyer

Any error herein is unintentional and subject to correction the following week. This summary is assembled from the best sources obtainable, and both producers and packers can assist by reporting actual sales or buys, giving names, dates and facts, and we will, if requested, withhold names. All we want is fact and a fair deal and correct information for the producers. Address A. L. Spellmeyer, care California Cultivator, 317 Central Avenue, Los Angeles. The Cultivator reaches over 40,000 producing farmers and livestock men.

The regular fall range cleanup is on. Every year just before the winter snows come to the range districts, the cattle and sheep prices show weakness, and later after the cleanup is over there always comes an advance. This will continue until producers and middle marketers have identical instead of divergent interests.

Lambs have sold as low as ten cents in Arizona, and this in the face of previous 11 cent feeder lamb sales that mean a winter lamb price of 15 or 16 cents. The fat lamb quotations are supposed to be around 13 cents, Los Angeles, but some of these lambs are not costing killers that much.

On cattle there is no actual change in prices as top steers run $7.50 to 8 delivered Los Angeles, with grass cattle bringing for steers 6.50 f. o. b. Flagstaff and Kingman, Arizona, and cows 4 cents in the country for ordinary grass fat 900 pound cows. However, cattle show an apparent weakness that neither supply in sight nor future conditions warrant and this can be due to nothing but the usual fall coyness of buyers with cattle that have to come in.

Some 20,000 head are reported to have reached the Imperial Valley alfafa fields with 10,000 more en route. Phoenix has taken up quite a number also. Feed charges are up to $3 per month in the alfalfa districts, and hay is high all over the southwest comparatively. In Los Angeles some afalfa was quoted at $26 per ton and some barley hay at $12 per ton. In former years a bonus of $5 per ton was paid for barley hay over alfalfa, instead of it being $14 per ton less.

No feeder steers of any quality can be bought to land here from outside districts under 6 cents and a lot will cost 7.

The stockyards open November 1. It will be a last opportunity for the California stock cattle and feeder buyers before winter snows shut down the bulk of range shipments. Thousands of feeder and stock cattle are coming into the stockyards from Arizona, New Mexico and Utah for the opening week of the yards, as well as thousands of fat cattle. This will be an opportunity for the men who want cattle to get lots to suit. As soon as these range shipments are stopped by snows and storm, California will have rains, and men want cattle they can't get at the present low prices.—A. L. Spellmeyer.

### CALIFORNIA EGGS IN NEW YORK

(Continued from Page 437)

of the best quality and of that 15 per cent about half are from the West coast.

"The weekly consumption of eggs in New York is about 140,000 cases per week and the best are now demanding 20 cents more per dozen than those of an inferior quality."

Oliver.

The Name Oliver On a Farm Implement Denotes Dependability That Insures 100 Per Cent Results

An unequalled reputation gained by sixty-five years of faithful service building for the world tillage tools that have an undisputed record of satisfactory performance in soil preparation.

RESULTS OF YEARS OF EXPERIENCE BUILT INTO OLIVER PLOWS AND IMPLEMENTS

The accumulated experience gained in over half a century of plow manufacturing leadership gives the Oliver Chilled Plow Works a decided advantage in the production of tractor plows. They are correctly designed and constructed to meet every need of power farming.

Oliver plows are built for open field orchard or vineyard work in any kind of soil.

Everywhere in California Oliver Plows and implements stand for Quality and Efficiency—They are the STANDARD by which all others are judged. Oliver is represented by some implement on nearly every ranch in California.

The Oliver line is wide and diversified, they range in size from the one horse walking plow to the heavy gangs for tractor power.

The Oliver line is kept up-to-date. New Oliver tools are made to meet all requirements as for instance; this year there will be two new Oliver Plows absolutely radical in design and accomplishments.

## TEXAS GULF SULPHUR

**Best for Agricultural Use**

CRUDE SULPHUR — FLOUR SULPHUR — INOCULATED SULPHUR
Direct Shipments From Portland, Oregon

As the world's largest producers of sulphur we can serve you best. Texas Gulf Brand contains 99½% pure sulphur and is supplied in three different forms, as above.

We will give your dealer or county agent full cooperation. Write us in detail regarding your sulphur requirements or wire us a night letter, charges collect, stating alfalfa acreage, kind and amount of sulphur you will use, name and address of dealer or county agent. We will promptly supply information and quotations.

# Los Angeles County Fair at Pomona

Photo by Frasher.

Pomona reigned on the Ganesha hills and a wonderful exhibit of earth's products was brought together in the Los Angeles County fair in her namesake city. The airplane view above gives but faintest intimation of the success of the exposition. For this first fair in the community the city of Pomona has purchased a tract of land on which the plan has been worked out as shown so plainly in the reproduction. The race track is in the background while the various exhibit tents and cattle barns are within a moment's reach of the entrance. The arrangement is remarkably effective, aiding the visitor in getting a general idea of all exhibits in a few minutes inspection.

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

## EDITORIALETTES

It is not as satisfactory as attending the fair, but a look at the cover will give one a remarkably clear idea of the fair held in Pomona last week. The tract of land purchased by the city for fair purposes lies nearby Ganesha Park, one of the prettiest little sections of California. The soil is wonderfully responsive, and Park Superintendent Paige will have entire supervision over the grounds, and by another year it is presumed it will make a showing of the beauty of growing plants.

* * *

We suppose the stuff which is now burdening the mails from the oil regions of Texas is within the law but certainly it seems to us that the post office department might well take cognizance of the appeals to the gambling instinct in some of these circulars. We all want to get rich quick, but lots of these "options" and "units" being offered by oil promoters to "investors" will make them get poor quick.

* * *

The time will soon be here for making purchases of the Christmas stamps offered for many years by the Red Cross during the months of November and December. The organization has need of funds in its fight to control tuberculosis, or, as it claims, "to eradicate the white plague from America." It will be a long, long time before this is accomplished, but speed the day! And perhaps the best way of speeding the day is to supply the funds necessary to the organization which is conducting the fight.

## SHINGLE ROOFS

Measure Number Three on the ballot on which we are to vote on November 7 seems to have been devised by certain trade interests to use the law making machinery of the state to advance their commercial success at the expense of others. It appears that the state housing commission is itself endeavoring to secure defeat of the measure. If it is passed it will prevent the use of California redwood shingles or any other wooden shingles in certain circumstances. It appears to us that this is a question which each city may settle for itself.

## UNCONSTITUTIONAL

The California Fruit and Vegetable Standardization Act is constitutional. We erred in the issue of October 14 in stating that the entire act had been declared unconstitutional. F. W. Read, chief of the bureau of standardization writes:

"It is not a fact that the California Fruit and Vegetable Standardization Act of 1921 has been declared unconstitutional by the state supreme court. The only portion of the act under consideration was that section of the law providing 'oranges shall be considered unfit for shipment when frosted to the extent of endangering the reputation of the citrus industry, if shipped.' (See Section 10). Also Section 15 in which it is provided that the director of agriculture is empowered to define, promulgate and enforce such rules and regulations as may be deemed necessary to carry out the provisions of this act. The section to the effect that oranges are unfit for shipment when frosted to the extent of endangering the reputation of the industry was held invalid on the ground that it was vague and indefinite. It was also held by the court that such indefinite language did not form a sufficiently clear basis for a definition under the language of Section 15. This decision, however, does not in any way affect the validity of the remaining portion of the act. You will notice that in Section 17 it is stated that the legislature hereby declares that it would have passed this act, and each section, subsection, sentence, clause, or phrase thereof irrespective of the fact that any one or more sections, etc. be declared unconstitutional."

## PYRAMIDING COSTS

The wool growers are up in arms over the attitude of the manufacturers of woolens. The manufacturers put up the strongest kind of a fight against the protection of wool in the tariff discussion and predicted greatly increased cost of clothing to the poor. Now they are proceeding to fulfill that prediction by doing the pyramiding act. If the entire increase in tariff were placed on each suit of clothes it would add but a few cents. The manufacturers, however, propose to add several dollars and proceed to collect them. The National Sheep and Wool Bureau makes statement regarding the situation.

"The extraordinary spread between price the producer of raw material receives and price the consumer is forced to pay the final distributor, and the method and capacity for pyramiding profits which clothing distributors have disclosed, place a tremendous burden on the consuming public and it so restricts or wipes out the profits of the producers of raw material as to seriously threaten the very foundation of our economic structure. Without regard to whether or not there is a protective tariff, there must be relief from this pyramiding of profits disclosed by the clothing distributors' threat to raise clothing prices several dollars per suit."

## STANDARDIZE IN ORCHARD

New York state is backing up and beginning at the beginning with standardization. Regarding her effort in this line the agricultural experiment station at Geneva remarks:

"Entomologists at the experiment station at Geneva have prepared a rather simple guide for identifying the cause of different defects appearing on mature apples at picking time. This guide has proved of much value to fruit growers and inspectors, particularly where fruit is being graded under the New York apple grading law. It is useful also in revealing defects in his spraying practices by showing to the orchardist which insects are not under adequate control in his orchard. With this information the spray practice can be so modified as to insure more efficient control and consequently higher grade fruit.

"The guide also describes injuries other than those produced by insects, such as spray deposits, hail and frost injury, sunburn, scab, etc. A routine system of spraying is described which has proved most effective in controling the insect pests and diseases that figure most prominently in the malformation of mature apples."

## FARMERS MUST PROSPER

Sometimes it's an uphill job to say something worth while, and this page must have worth while things on it. It appeals to us that this week we have something from Secretary of Agriculture Wallace which is better than anything we can say so we quote from his recent address at Frankfort, Indiana:

"The present administration believes we have got to have a prosperous agriculture as well as a productive agriculture. Prices for farm products which are below the actual cost of production may for a time seem to be a good thing for the people in the cities. In the end the result is bad for everybody. Unless agriculture is prosperous it can not continue to be productive. Farmers can not and will not continue to produce at a loss. The young men will leave the farm and go to the cities. Just now the people of the United States seem willing to pay more for work in the cities and industrial centers than on the farms. Almost the lowest paid laborers are getting higher wages than skilled farm hands, and more than many men who own their farms. If this continues more and more farmers will go to the towns and cities. No one can blame them for this, but it will result in reduced agricultural production. After a time prices of farm products will be so high that people in the cities will suffer. It is just as bad for the nation to have prices too high as to have prices too low. There must be a fair relationship between prices of things the farmer has to sell and prices of things he has to buy. There must be a fair relationship between wages on the farm and wages in the city. That is the only way we can have a balanced national life.

"The administration, from the president down, realizes the danger of the present situation. Congress realizes it. Congress has passed a number of laws designed to help the farmer improve his condition. Government administrative agencies are working along the same line We have been reorganizing the work of the department of agriculture to some extent. Heretofore the emphasis has been put on showing farmers how to produce more. That is right and proper. But we propose to put the same emphasis on helping farmers get fair prices for their crops by adjusting their production to the probable demand and by better methods of marketing. We have reorganized the economic work of the department. We have men in Europe seeking for new outlets and larger outlets for our surplus crops. We are studying changing business conditions as they are likely to influence the demand for farm crops, so that we can tell farmers about what they may expect. We are carefully noting production in agricultural countries which compete with us. We are improving our methods of estimating our own crops and livestock production. We hope to be able to report more accurately the number of hogs and cattle and sheep that are grown each year, so that there can be a better balance between our grain crops and our livestock, and in this way help our people avoid both overproduction and underproduction."

## FROST PROTECTION

As the season of the year approaches when we may expect cooler weather and frosty mornings we hear all sorts of predictions as to what variety of weather the coming winter holds in store for us. A mild open winter is predicted by some while others say all signs point to a long cold one.

Those of us who have spent the better part of our lives in California know that weather conditions here are about the most uncertain of any place in the universe and, while we oftentimes look back and remark that the fall of some year away back yonder started off just as this is doing and was followed by a very mild or very cold winter, as the case may be, we know it by no means follows that the next winter will be anything like any other winter we ever had.

With the memory of last winter fresh in our minds we can not help but be somewhat concerned as to what to expect in the way of weather during the next three or four months. In any event it is well to be prepared for the worst even though you may half way feel that there is no cause for worry.

We are glad to see that the citrus growers in some of the sections where the cold was most severe are going ahead in a systematic way to prepare for any cold snap that might come and we can not help but feel that such precaution is good insurance. In the Pomona valley many of the growers are discarding their old frost fighting equipment and installing new fire pots. Arrangements for the keeping of records and reporting of temperatures throughout the district are being made and on all dangerous nights members of the association will be kept informed by telephone as to the temperature in their locality and so be prepared to light their pots whenever the danger point is reached. With the experience of last winter, together with the better equipment, the growers should be in much better shape to fight the cold if it comes, and the results will no doubt be more uniformly satisfactory.

If the growers in all the citrus districts would join together and adopt some uniform plan of frost protection such as has been done at Pomona, we are sure that should another severe freeze come this winter the damage to the citrus industry would be very much less than last season.

## MANHOOD—WOMANHOOD

Manhood, womanhood, character were the outstanding words in nearly every address at the dedication of the dairy and horticultural buildings at the University Farm at Davis, October 25. Regent Foster in his talk emphasized the fact that this institution teaches agriculture, but more, it protects character and builds men. Dean Hunt declared that manhood was the essential foundation, learning secondary. Prof. Chandler: "Truth breeds new truth." Dr. Wickson: "California horticulture within the span of one man's life has shown the most wonderful development in the world's history." James Mills, Jr.: "Greater accomplishment is due to high character efficiency." President Barrows: "This institution shall stand for character, health and knowledge; character is the essential." Prof. Roadhouse: "Mental friction develops ideas." Prof. Hutchinson: "Better boys, better girls, better animals, better plants."—C. B. M.

# Los Angeles County Fair at Pomona

By Cultivator Staff

POMONA asked to be made the permanent site of the Los Angeles County Fair. She got it. The board of supervisors and the Los Angeles Chamber of Commerce united in the endorsement. The city council of Pomona cooperated by purchasing a 44 acre tract of the old Vejar rancho. It lies near the famous Ganesha Park and will be in a measure an extension of that park, though it is being fitted with permanent buildings and race track for fair grounds. The secretary of the chamber of commerce is Park Superintendent Paige, and his well known landscaping ability will be used to bring beauty out of the rich soil which has been chosen for the permanent fair site. This is mentioned to show that Pomona is really in earnest in its making of a fair worthy of the highest producing agricultural county of the United States. This fair was the first ever held in Pomona and it is a wonderfully close competitor to the state fair and perhaps carried the most extended line of exhibits of any fair held in the state excepting the state fair.

Before the gates were opened plans were already in the making for the fair of 1923 and assurance is given that it will be bigger and better.

### Horticultural Exhibits

The horticultural exhibits consisted of 17 community booths, two school booths, two county exhibits and scores of fruit and floral exhibits by individuals. Then, too, there were three booths of walnuts and one of apples.

Chino, though in San Bernardino County, had three booths filled to overflowing, one of apples, one of walnuts, and one of general farm produce. The latter was chiefly a huge horn of plenty from which flowed all the Chino Valley horticultural products. It was the most striking display in the big tent and all three of the judges thought it would score highest. But it wouldn't. East Pomona had 40 or 50 more varieties shown, and two other booths scored higher on quality. So Chino received third though the most generally attractive.

East Pomona won first on the list of 16. This booth contained the greatest number of varieties, which on the fair's schedule carried the highest number of points. In quality it was second, fairly well up on educational value and execution and of some originality of design. Incidentally, a horn of plenty is not original, but a very common design in displaying products of the soil.

The El Monte booth was second and won in total per cent merely by rating fairly high on all five points: variety, quality, educational value, originality and execution of display. It did not need to stand first on any one of the five. Chino, as before stated, was third, with a fine, well arranged display. La Verne and Baldwin Park stood high in the markings. The Los Angeles Chamber of Commerce booth did not compete, as Charles P. Bayer, in charge, thought it unfair to draw on the chamber's supply to compete against the various districts from which the exhibits originally came.

### County Exhibits

The largest, most finished, most spectacular horticultural displays were made by Fresno and Kings Counties. It is safe to say that nothing finer was every shown in the state and even the loser may well feel proud of his effort, for out of a possible 100 the two were judged to be but five points apart, with Fresno County the winner. This display has won first in all parts of the state. In some fairs Kings County has come within two points of the winner.

There were two exhibits from educational institutions where the producers were required to be boys or girls under 20 years of age. The contestants were the George Junior Republic and Chaffey Junior College of Agriculture. Here again the judges traveled back and forth between booths many times, finally declaring Chaffey winner by the narrow margin of eight points.

The individual entries in fruits and flowers were many and of varied value. Some were highly commended by the judges, while others were so poor as not to be considered, so that in some lines no awards were made. The judges particularly recommended more labeling of varieties, for without labels a display has very litttle educational value.

## LIVESTOCK AT THE LOS ANGELES COUNTY FAIR

THE last show of the season brought together one of the choicest displays of livestock seen this season. After a busy season of exhibiting the owners had a good line on their chances and only the ones with the best stayed. The classes were not as large as at some of the other shows but the quality was of the very best.

The big herd of Holsteins shown by Fred Hartsook of Lankershim was not like the prophet, it won honors galore in its own county. Most of the opposition was brought out by the California Junior Republic of Chino. Dichter Spofford Korndyke Lad 5th, the great bull which heads the Junior Republic herd, again came to his own. The old bull was never in better condition than when he beat the Hartsook bull who had beaten him in Sacramento and at Riverside. Ava Model Hengerveld 2d was again grand champion cow.

The Guernsey classes were well filled and Judge Scribner found a wonderful lot of animals to look over. The Italian Vineyard Company of Guasti and Russell Cox of San Marcos had the most animals and won most of the money. The junior bull shown by A. O. Dinsmoor of El Monte was too good for the aged bulls and was made grand champion. He is sired by the great bull Masterpiece of Edgemoor and is a worthy son of a great sire. Caroline E. Langdon of Hollow-Hill Farm was grand champion cow, repeating her Riverside winning. She is a grand heifer and had she been in shape at state fair time she undoubtedly would have been undefeated for the season. This heifer combines a lineage of high testing dams with wonderful show type and quality. W. H. Rapson of Chino also showed four animals and won many ribbons. Pomona is the center of a large number of small Guernsey farms as well as a number of big ones, and the Guernsey show in time to come will be a big one.

There was considerable competition in the Jersey classes between F. R. Bain of Los Angeles and Harry Cook of Chino with D. E. Huff of Orange, George Thomas of Riverside and others appearing often in the prize list. Both championships went to Bain on his young bull, Gamboge's Majesty Falcon, and his dam, Imp. Golden Lustre. The Jersey show was exceptionally strong and the quality excellent.

The Ayrshire classes were made up of individuals from the H. G. and MacMinn herds. Judge Smith of Spokane complimented the owners very highly on the type and quality of their animals. The grand champion heifer, Heather Belle of Phoenix, belonging to MacMinn, particularly caught his eye, and she was slated for grand champion from the time she first entered the ring. H. G. won three championships and won grand champion bull on Lady King Repeater.

The Berkshire hog show brought together the herds of the Italian Vineyard Company, Chester Johns and A. B. Humphrey as in former shows and the results were much the same as before. Humphrey's aged boar, Escalon Big Joe, repeated and Violet's Festline owned by the Italian Vineyard was again grand champion sow. This sow has never been defeated for championship honors and will probably not be shown again.

The Duroc classes were dominated by the big herd from the Charnock Ranch which was of wonderful quality. The only blue which this herd lost was won by a sow pig by Mammoth Sensation shown by G. A. Goodell of Spadra.

The Poland China show was one of the best seen in Southern California in some time. The big herds of A. Buckland and Son of Fresno and Johnson Brothers of San Diego won most of the ribbons but they ran into a snag in a sow named Fashion Bobbie owned by G. H. Goodrich of Los Angeles and her four pigs. The sow was first in the senior yearling class and the pigs won first, third and fourth in the junior sow pig class, and four firsts in the groups. Judge Jenkins of Indiana pronounced them the best litter he had seen this year and he has judged a number of state fairs in the Middle West and East. A number of smaller breeders showed and won in the various classes.

The Hampshire show consisted of the big herd owned by Francis T. Underhill of Santa Barbara and was shown to prove Mr. Underhill's theories in line breeding. Judge Jenkins was greatly impressed with the great improvement Mr. Underhill has made in the breed and predicted that if it keeps on all roads in Hampshiredom will lead to his door. He was so much impressed with the young pigs that he made a junior pig grand champion sow which is something he has seldom done in his long period of judging.

Following are livestock awards:

### Holsteins

Exhibitors: Fred Hartsook, Lankershim; California Jr. Republic, Chino; D. L. Wright, Pasadena; Frampton Bros., Artesia; M. B. Christiansen, Norwalk; A. MacMinn, Corona; Ted Farney, Pomona; G. E. Curtis, Chino; Earl Allen, Pomona.

Aged bull—1, Dichter Spofford Korndyke Lad 5th, California Junior; 2, Major Korndyke Pontiac Fobes, Hartsook .

Two year old—1, Korndyke Pontiac Fobes Mona, Frampton Bros.

Senior yearling—1, Republic Spofford Ida Lyons, California Jr.

Junior yearling—1, Tritomia Panzie Ormsby, Hartsook.

Senior calf—1, Meadhart Aaggie Mead Ophelia, Hartsook; 2, Sir Veeman DeKol Acle, Christiansen; 3, unnamed, California Jr.; 4, unnamed, MacMinn.

Junior calf—1, Meadhart Aaggie Mead De Kol, Hartsook; 2, Meadhart Aaggie Mead Ormsby, Hartsook; 3, unnamed, California Jr.; 4, Korndyke Pietertje Clement, Hartsook; 5, Meadhart Aaggie Mead, Hartsook.

Aged cow—1, Ava Model Hengerveld 2d, Hartsook; 2, Bessie Snowball De Kol, Hartsook; 3, Parthenia Paul Segis 2d, Hartsook; 4, Iris De Kol Canary, Hartsook; 5, Ida De Kol Pearl Lyons, Cal. Jr.

Two year old—1, Lily McKinley Ormsby, Hartsook; 2, Handsome Tuebie Spofford, California Jr.

Senior yearling—1, unnamed, California Jr.; 2, Rag Apple Tritomia Ormsby Segis, Hartsook; 3, Cornucopia Paul Segis Fayne, Hartsook; 4, Doris Nephele Pontiac, California Jr.

Junior yearling—1, Caroline Wayne, Hartsook; 2, Flush Ormsby Trito Segis, Harstook; 3, Cornucopia Paul Ormsby, Hartsook; 4, unnamed, California Jr.; 5, Pearl Pride Dione, Forney.

Senior calf—1, Meadhart Mary, Hartsook, 2, Nancy Calamo Korndyke 2d, Hartsook; 3, Meadhart Pietje, Hartsook; 4, Queen, California Jr.; 5, Burr Farm Hengerveld Lady, Allen.

Junior calf—1, Meadhart Eva Bona, Hartsook; 2, Meadhart Jacoba Pontiac, Hartsook; 3, Meadhart Tuebie Segis, Hartsook; 4, Meadhart Home; 5, Burr Farm Hengerveld Lady, California Jr.

Senior and grand champion bull—Dichtor Spofford Korndyke Lad 5th, California Jr.

Junior champion bull—Tritomia, Panzie Ormsby, Hartsook.

Senior and grand champion cow—Ava Model Hengerveld 2d, Hartsook.

Junior champion cow—Caroline Wayne Fayne, Hartsook.

Aged herd—1, Hartsook; 2, California Jr.

Calf herd, 1 and 3—Hartsook; 2, California Jr.

Dairy herd, 1 and 3—Hartsook; 2, California Jr.

Get of sire—1, get of Tritomia Piertje Ormsby, Hartsook; 2, get of Dichter Spofford Korndyke Lad 5th, California Jr.; 3, get of Sir Aaggie De Kol Mead, Hartsook; 4, get of Hazelwood Finderne Fayne, Hartsook.

Produce of dam—1, produce of Mona Fobes, Hartsook; 2, California Jr.; 3, produce of Beauty De Kol Rika Ormsby, Hartsook; 4, produce of K. S. P. Lily McKinley, Hartsook.

### Guernseys

Exhibitors: Italian Vineyard Company, Guasti; Russel S. Cox, San Marcos; W. H. Rapson, Corona; I. J. Scott, Pomona; E. O. Tucker, Saticoy; Ernest Wobig, Chino; G. T. Drinkwater, Lakeside; A. O. Dinsmoor, El Monte; A. A. Cook, Pomona.

Aged bull—1, Itchen Daisy's Butterboy of Revada, Rapson; 2, Cherub's Sunny Jim of Revada, Italian Vineyard; 3, Reliance of Edgemoor, Cox.

Two year old—1, Carl E King of Hollow Hill Farm, Italian Vineyard; 2, May Day of the Rancho, Scott; 3, Brilliant's May Secret of Edgemoor, Cox; 4, Lone Tree Actor, Rapson.

Senior yearing—1, Escalon Princess White Face, Wobig.

Senior calf—1, Reuben L. King of Hollow Hill Farm, Italian Vineyard; 2, Guasti's Twilight Topper, Italian Vineyard.

Junior calf—1, unnamed, Dinsmoor; 2, Rosana's Boy of Sycamore Ranch, Cox; 3, Marchie Boy of Sycamore Ranch, Cox; 4, Golden Rose's Butterboy of Corona, Rapson; 5, Guasti's Dorthie Jim, Italian Vineyard.

Aged cow—1, Rosie E. King of Hollow Hill Farm, Italian Vineyard; 2, Revada's Princess Pat, Italian Vineyard; 3, Im-

(Continued on Page 456)

# Agricultural News Notes of the Pacific Coast

## Northern California

San Francisco receives nearly a thousand tons of hay each week.

County Agent Goatley of Glenn reports citrus survey being made in that county.

More than 20,000 cars of fresh grapes have been shipped from California this season.

Two fine buildings, one devoted to horticulture and one to dairying, were dedicated at the university farm at Davis last Tuesday.

A suit of the reclamation service to settle water rights on Stony Creek in Glenn County has been postponed until November 13.

November 13 will be California Pear Day. The second annual meeting of California Pear Growers will be held at Berkeley on that day.

Rains falling in the rice fields the middle of October are declared by the growers to have been no handicap in general harvesting work.

The university farm at Davis is distributing seed of various varieties of wheat, barley and oats at prices not far above those paid for ordinary seed.

Sonoma County grape growers estimate losses to the industry in that county because of the transportation situation will aggregate at least a million dollars.

The California Orchard Companies Inc. of Sacramento has changed its name to California Deciduous Fruit Companies to avoid confusion with another concern of similar name.

County Horticultural Commissioner Redmayne of Marin County, reports greatly increased acreage of potatoes The potatoes are however under size because of insufficient irrigation.

President Sheehan of the Grape Growers Exchange predicts that half of California's 250,000 tons of wine grapes will never reach market because of lack of shipping facilities.

Some roads are refusing to accept shipments of grapes in box cars because of feared losses and claims against the transportation company. More than one-fourth of shipments have been in box cars.

Construction of a reservoir lake district back of the Brownwell or Julian Rocks and the forming of a new unit to the Orland irrigation project of 25,000 to 30,000 acres, is a major propject of the Orland chamber of commerce.

The California Prune and Apricot Growers has notified the trade that it can book no more orders at present for prunes as the crop has fallen below estimate. Apricots can be supplied only in limited quantites of certain grades.

H. A. Walton and Sons have just built a dehydrator on their ranch near Tudor, Sutter County, to handle raisins and prunes. Many Sutter County orchardists have been sending their partially dried fruits to the dehydrator at Modesto.

The State Farm Bureau Federation has just received a large shipment of posters, window cards, windshield stickers and general advertising material to be used in connection with the farm bureau membership campaign which are starting in the various counties.

## Central California

Raisin Day will be celebrated in 1923 on April 30.

Stanislaus County recently celebrated its first annual Peach Day.

A home department has been organized in the Pajaro farm center.

Fruit dryers have been content with one of the best years ever experienced.

The Tanforan race track near San Francisco will not open till some time in February.

Hollister, San Benito County, reports grape picking very slow because of car shortage.

San Benito County grain growers are refusing to sell Chevalier barley at present prices.

The Boys Agricultural Club of Pajaro Valley will have display at the Santa Cruz County fair.

Green Lima beans are being canned at the plant of the Pacific Pea Packing Company at Oakdale.

Emperors are shipping freely. Over 72 packing houses of the San Joaquin Valley are now shipping Emperors.

Salinas, Monterey County, reports plans for liberal planting of apricots and pears during the coming season.

Tulare County is endeavoring to make truck drivers conform to regulations in the matter of weight limit.

The South San Joaquin and Oakdale irrigation districts continued irrigation much later than any preceding year.

Don Pedro dam it is now announced is ready to start storing waters of the Tuolumne. The district will save the entire winter run off.

The California Bean Growers has begun suit against several Salinas bean growers for failure to deliver beans under contract.

For the season just closed the Sequoia and General Grant national parks, showed registration of 19,896 autos and 77,980 people.

Officially the Sequoia and General Grant national parks closed October 10. Unofficially both will be accessible to tourists till snow flies.

The fiftieth annual session of the California State Grange Patrons of Husbandry was held in Pacific Grove, Monterey County last week.

The Madera irrigation district proposes a storage district which will contain 883,000 acres. The storage and the natural flow of the San Joaquin River will provide 1,800,000 acre-feet.

Stanislaus County's farm bureau cow testing department reports 477 cows in the last month's test. The highest cow produced 90.3 pounds of fat from 2382 pounds of milk. It's the dry month of the year.

Pork Day at Turlock, October 31, will be observed by Stanislaus and Merced Counties swine growers. Seventy owners have listed 700 hogs to be shown on this day, then auctioned through the farm bureau marketing association.

Extermination of noxious weeds through cooperative action was discussed at Turlock chamber of commerce luncheon. It was voted to communicate with Stanislaus and Merced County supervisors, also with directors of Turlock irrigation district and other organizations.

## Southern California

The large exhibit of goats at Riverside fair last week attracted much attention.

A 500 acre pecan orchard is said to be planned for some location in Imperial Valley

Annual Ventura Company apricot growers institute, October 27 at Ventura high school.

The Sperry mill at Riverside is being extensively enlarged and equipped with new machinery.

The annual meeting of the Water Conservation Association was held at Riverside, October 13.

The Brawley high school is giving a five weeks course in intensive agriculture. It began October 16.

Work on the Corona-Elsinore road is soon to begin. Contracts have been awarded by Riverside supervisors.

A purebred calf contest will again be conducted this year by junior members of the Los Angeles County farm bureau.

Home center meetings will be held in Imperial County at Spruce-Trifolium, October 24; North End Calipatria, 27.

The Goleta warehouse of the Santa Barbara Walnut Growers shipped out three carloads of nuts in the second week of the season.

Experimental plantings of varieties of peas for Imperial Valley have been made for three years at the United States experiment farm at Bard.

The citrus growers department of the Los Angeles County farm bureau will spend the rest of the year in investigation of fertilizer problems.

Work will begin immediately on the Salton Sea highway from Westmoreland to Imperial. This announcement is made by the highway commission.

A bunch of 1200 steers was received in Oxnard last week from Seligman, Arizona. The feeders are distributed through the beet fields to fatten on the tops.

Walnut packing houses find a percentage of nuts with no outward evidence of burn show up shriveled meats. These are sucked out of the regular pack.

Calipatria is planning a cotton festival the week of November 4-11. There is talk of advancing the Imperial Valley auto show from December to become a feature of the festival.

A great convention of the farmers of the Imperial Valley on plans to build up the soils of the Imperial Valley is being pushed by the Associated Chambers of Commerce of the county.

Victorville in particular and San Bernardino County in general celebrated on October 12 the dedication of the state highway recently completed from Victorville to the summit.

A deciduous fruit growers institute will be held at San Fernando, November 10. At this meeting the deciduous fruit growers department of the Los Angeles County farm bureau will formulate plans for the season's work.

Outline of the proposed method by which lettuce is to be marketed during the coming season was given at the recent meeting of the Spruce farm center, Imperial County, by Charles Hunt, of Hunt, Hatch & Company.

## The Coast and General

Some Arizona grapefruit is already on the market.

Many new drying plants are being built in Oregon to handle the prune crop.

Forty-five per cent of the farmers of Arizona own autos; 3.6 per cent own tractors.

The German distillers are now using imported corn for the alcohol industry in place of potatoes.

Some fall plowing has been done in Yuma section of Arizona but most activity is centered on the cotton picking.

Portland, Oregon, is now the second largest wheat shipping port in the United States. Galveston, Texas, ranks first.

August shipments of grapefruit to the United States from the Isle of Pines totaled 41,135 crates bringing $6 to $8 per crate.

There is a big surplus of potatoes in Canada and Norway. Norway is shipping to Cuba and endeavoring to find markets in South America.

An irrigation district of 25,000 acres has been formed near Maricopa, Arizona. Electric power will be furnished from the Salt River project.

Fat steers from the range, or finished in the Salt River Valley, in central Arizona, have sold for 6½ cents per pound f. o. b. shipping points.

Dairymen of the Salt River Valley, Arizona, will receive 72 cents a pound for butter fat in Grade A milk, 70 in Grade B, and 60 for Grade C for the month of October.

Regular daily apple trains are now the rule out of the Wenatchee, Washington, terminals and these will soon be increased to from two to three solid trainloads every 24 hours.

Plans to raise $100,000 from citizens of Washington to be loaned to farmers in the crop failure districts in the Big Bend country for winter seed have been begun by the directors of the Spokane Chamber of Commerce.

Portland exporters of apples believe that one effect of the low prices this season will be an increasing movement in stock for the orient. They say the Chinese trade takes readily to the sweeter Northwestern apples.

The Walla Walla, Washington, seed potato association at a recent meeting decided to market its potatoes in the county this fall as much as possible, instead of shipping out. The reason given is that many potatoes coming in are diseased and it is feared the disease will spread.

Grain warehouse men have been notified by the department of public works in Olympia that the practice of deducting a full pound for the weight of the sack when weighing grain must be stopped at once or immediate prosecution will result. The department's weighing rule provides for the deduction of three-quarters of a pound.

Hood River, Oregon, growers will pay from 4 to 5 cents a box for picking apples, depending upon efficiency, orchard conditions and permanency of workers, while 4½ to 5 cents a box will be paid for packing. Sorters will receive $2.50 to $3 a day and day wages for men will range from 30 to 75 cents an hour and for women from 25 to 30 cents per hour.

# Peach Scab in Southern California

By H. R. Stanford, Plant Pathologist,
Chaffey Junior College

CALIFORNIA deciduous fruits have as a rule been characterized by a freedom from fungous diseases much greater than that enjoyed by the same fruits grown east of the Rocky Mountains. Partly because of climatic differences and partly because of the fact that California fruit growing is a younger industry and also somewhat isolated and therefore there has not been the chance for disease to enter and spread, we have been immune or practically so to several of the diseases which threaten the crops of the eastern grower. If due to the first reason, climatic differences, we would expect a permanent freedom; if on the other hand it is because the diseases have not obtained a foothold here, then unless quarantine keeps them out, we may expect sooner or later to find them coming in.

Peach Scab As it Affects the Twigs
Twigs showing the winter "holdover" cankers, indicated by arrows.

One peach disease which has been serious in eastern peach growing sections for years, and which has been the cause of losses of as high as 80 to 90 per cent of the value of the crop in some cases, is peach scab, also sometimes known as black spot or black mildew. It is occasionally locally called shot-hole, thus confusing it with the Caifornia peach blight, an entirely different trouble. In recent years, and especially in the past two or three, this disease has appeared to be becoming more and more common in several peach growing districts of California. In the district served by Chaffey Junior College of Agriculture there have been at least two centers of infection from which this disease has spread rather rapidly and where the losses have become so serious that growers are inquiring as to methods of control.

Before answering questions regarding control it is necessary to know how to recognize the disease and something of its life history. The evident symptoms are found on the fruit, on one year twigs and to a slight extent on the leaf. On the fruit it first eppears as olive colored spots, separated or running together according to their number and size. Usually these occur on one side or near the stem end of the fruit. They gradually become larger, and if the fruit is a medium or late maturing variety, there is a corky layer of cells formed which cracks and from the appearance of which the name scab comes. These spots do not penetrate into the flesh of the fruit, neither do they in themselves cause a rotting though scabby fruits are known to be more susceptible to rots than are fruits which are perfectly sound. The damage to the fruit is largely in the lowering of the grade and consequently the price, both from its appearance if sold green and its value for canning. The worse spots on the fruits are not removed with the skins in the lye bath of the cannery, but persist as blemishes on the halves. As a consequence the fruit thus rendered imperfect is thrown into a lower grade and commands a much lower price. In one lot from a badly infected orchard followed through the cannery, over 50 per cent of the fruit was thrown from "B" grade into "C" and "D" on account of various imperfections. Since the difference in price between the grades was something like $30 per ton it is evident that the disease can cause serious loss. Then, also, the infection not only lowers the grade but hinders full deveopment in size. A badly infected fruit is frequently lop-sided, under-developed under the scab, and does not ripen uniformly, remaining green under the scab infection for a longer time than the rest of the peach.

On the twigs the fungus causes brownish cankers, perhaps one-eighth to one-quarter inch long, usually rather oval. These form on the young twigs and are caused by the threads of the fungus growing just beneath the outer bark of the twig. While it does no serious damage to the twig, this stage is important because it is the winter hold-over of the disease.

On the leaves the fungus also causes olive colored spots on the under side but rarely if ever causes defoliation or serious injury. Spores are produced in abundance on the infected leaves and these probably increase the amount of twig infection.

A knowledge of the life history of the causal organism throughout the year is essential to an intelligent understanding either of infection or of control of any disease. As stated above, the scab organism, Cladosporium carpophilum winters over as mycelium beneath the epidermis of the twig. This explains why a dormant spray such as is effective on peach leaf curl is of no value in controlling scab. The fungus is then beyond the reach of the fungicide. In the spring as the growth of the tree is renewed the fungus also resumes its growth and very soon begins to produce the spores or reproductive bodies which spread the disease. These are in themselves capable of infecting the newly set fruits immediately if it were not for the fact that the dense mass of hairs or pubescence then covering the fruit affords them a temporary protection. After about four weeks the growth of the peach has so spread the hairs that the tiny spores can drop between them, reach the fruit and, germinating there, enter and infect. Like the spores of all fungi, however, a certain amount of moisture is essential for germination and it is only when this is furnished by late rains, fogs, or perhaps heavy dews that serious infection occurs. With proper conditions of moisture there will be continuous infection of the fruits from twig lesions all during the summer. As new twig growth comes on, it will be infected by these spores, new lesions form and these wintering over complete the life cycle. After the fruit is infected there is a rather long period of incubation or time before the spots become visible. This is usually from six to seven weeks, after which the spots continue to enlarge as long as the peach remains on the tree.

Peach Scab As it Affects the Fruit
Young Muir peaches badly infected with fully developed scab.

Based on our knowledge of life history, given above, it is evident that control will consist of protecting the young peach from the falling spores during the period beginning about a month after bloom and lasting till five or six weeks before the date of ripening. Eastern spray schedules call for one, two or three sprays, depending upon the lateness of the variety to be protected. Our results indicate that under California conditions, where rains are not likely to wash the material off, one or at most two applications are all that are likely to be needed for our usual canning varieties.

The only material so far in common use for the control of peach scab, is self boiled lime-sulphur, a mechanical mixture of sulphur and water, the sulphur rendered finer and therefore more effective by a slight boiling from the slaking of the lime. This boiling must not progress far enough so that soluble sulphides such as constitute the commercial liquid lime-sulphur, are formed. In other words, boiling must be stopped before any great quantity of the orange colored liquid forms on the surface of the cooking material. The propositions recommended and used here are, 32 pounds quick lime, 32 pounds ground sulphur or flowers of sulphur to 200 gallons water. It is not difficult to make up the spray, though not especialy agreeable. The lime and sulphur may be placed in a barrel or lime box, mixed slightly and the slaking started with a small amount of water. Care must be taken that the material does not burn, neither should it be drowned with too much water. After cooking by its own heat for 20 to 25 minutes, it should be ready for further dilution with cold water and straining into the spray tank, where the final dilution to 200 gallons can take place.

Our experiments at Chaffey this year have shown this material to be as efficient in the control of peach scab in southern California as in the east. In one orchard, variety Ontario or Southern Tuscan, the amount of infected fruit was reduced from 14.7 per cent where not sprayed to one-tenth of one per cent with two sprays and to sixth-tenths of one per cent with but one application. In a Muir orchard, the unsprayed trees carried 29 per cent of scabby fruit, one spray reduced it to 9.2 per cent and two to 1.7 per cent. In all the sprayed trees, the scab remaining after spraying was only a few scattered spots and not commercially important.

In both cases the first spray was applied the latter part of May and the second about one month later.

(Continued on Page 448)

# The Peach as a Root Stock

By Leonard Coates

PREJUDICE often acts prejudicially to one's best interests. The objections to the peach root have been both illogical and unwarranted, in most cases. In the first place the peach root is called short lived; in the second it is generally presumed that it will not succeed in heavy land; again, it is supposed to be more susceptible to attacks of peach root borer.

Most commercial planters believe in one or more of these claims, which however, do not seem to be borne out by the facts.

The bark of the peach tree is thin, and for that reason liable to injury when exposed to the direct rays of the sun. Hence sunburn, flat-headed borers, decay, death, all of which may easily be avoided by shading the trunk.

But this does not necessarily mean the death of the root which will usually continue for years to throw up suckers. The peach root will thrive in any well drained land, and, being a great surface feeder, will do well in shallow soils or where hard pan or clay is nearer the surface than might be desired. There is a lower percentage of loss with trees on peach root than with almost any other, owing to its ability to throw out fibrous roots or feeders.

When what is known as "peach root borer" has access equally to plum, almond, apricot or peach, it does not appear to be in any way partial, but attacks any or all without preference.

The main difficulty, which applies also to other fruit tree stocks, is the ability to obtain good seed. Prof. W. L. Howard has recently returned from a year's travel in European countries where his special mission was the investigation of the supply and quality of fruit tree seed and stock for export and the possible discovery of some that might be useful in California but which had not so far been introduced. Professor Howard was not favorably impressed with the quality of much of the stock grown for export, owing chiefly to the mixture of seed, and, in any case, there was not nearly enough of either seed or seedling in sight to be of much use even for California's requirements.

Nurserymen experience increasingly greater difficulty in getting good peach seed. The demand for Myrobolan seedlings, or for prune, plum, and apricot on Myrobolan root, has stimulated the planting and cultivating of Myrobolan trees for the production of seed, so much so that California is independent of this stock formerly imported from France.

A great point in favor of the peach root for the apricot, prune and almond, as well as for many varieties of plum, is that such trees in many localities are much less liable to "gum" or "sour-sap" than when on Myrobolan root. Since having more time for observation I am convinced that the facts will bear out the statement. Where the Myrobolan root succeeds, and the variety growing on it is satisfactory both as to tree and fruit, doubtless it is safe to "let well enough alone," but this is no proof that the peach root would not have done better.

Split pits and pits with poor or shrivelled kernels prevail, and many tons of seed have to be tested at the canneries and drying yards before any may be obtained having but a fair percentage of good kernels. It is for the nurserymen to lay aside trees in their own orchards or test grounds solely for the production of seed. Peach seed is rapidly deteriorating under cultivation. This can be remedied gradually, but not at once, or on a large scale, where millions of trees are called for.

Just a word as to tap root, and this applies to any fruit or nut tree—— forget it! The properties in the soil which go to make fruit are within a very few feet of the surface, therefore do all that is possible to encourage a well branched root system. If it is the nature of any tree, such as the almond or black walnut, to send its roots down more vertically, you can't prevent it. To cut the original tap root simply causes several to go down instead of one.

**Corn Shredding—and Goodyear Belts**

*Alex Woelffer, of Watertown,* Wisconsin, says the only belt he ever used that really held the pulleys and ran trouble-free is the Goodyear Klingtite Belt. "Even during and after rains, it delivers without a miss," he says. "There is never any tension to endanger the engine through overheating; never any re-setting. It does not stretch, shrink or stiffen.

*"It is so powerful* and so efficient that I have not only got my own work done with it easily and quickly, but have found time to use it many extra hours for my neighbors, in their threshing, silo-filling, corn-shredding and wood-cutting. I have made $3 an hour in that way, and counting these earnings with my own savings, the belt paid for itself long ago."

*Goodyear Klingtite Belts* put an end to farm belt troubles. They need no breaking in. They require no belt dressing. They do not separate at the plies. Goodyear means good wear.

*They come in endless type* for all heavy duty and in suitable lengths for water pumping, cream separating, electric lighting plant, washing machine and other light drives. For further information about them write to Goodyear, Akron, Ohio, or Los Angeles, California.

# Why Should the Farmers Organize? Why Join the Farm Bureau?

By J. A. Teagarden

**Why Organize?**

The farmers should all be organized under one big organization for the promotion, development and protection of their agricultural interests which they hold in common.

Special interests should be organized and controlled by those interested in the specialty.

Commodity interests should be organized and controlled by those interested in the commodity.

Local interests should be organized and developed by those living in the locality.

In every successful organization the membership must have a common interest.

Therefore the one big farmer organization must not be founded upon special or commodity interests but it must be founded upon the social, educational and economic interests, common to all, such as legislation, taxation, transportation, public improvements, public institutions and other general interests.

**Why Join the Farm Bureau?**

Because it represents common interests of all.

Because it has already a local, county, state and national organization.

Because it is organized in every state in the Union except one.

Because it has the largest membership of farmers of any organization in the United States.

Because it has local or center organizations to meet local or community conditions.

Because it has a county organization composed of federated center organizations for the purpose of handling problems that cannot be handled by the center alone.

Because it has a state organization composed of federated county organizations for the purpose of handling problems that cannot be handled by the county alone.

Because it has a national organization composed of federated state organizations for the handling of problems that the state cannot handle alone.

The farmers by organizing under one big organization can have the vision of all to promote, the constructiveness of all to develop and the strength of all to protect.

The farm bureaus of the various states have a combined membership of over 1,600,000. A national membership drive is now being waged in every county and local center to double this membership. The drive is on —join the farm bureau.

## AUSTRALASIAN ANNUAL

The Australasia Fruit Grower published at Melbourne, Victoria, Australia, issues an annual and trade record for 1922. It is a volume of 120 pages with stiff board covers and contains extended articles on fruit culture as carried on in Victoria. In the article on the marketing of fruit crops conditions as they exist in New South Wales, Queensland, South Australia, West Australia and Tasmania are also given. Regarding export:

"Our big future developments in marketing must take place overseas, but our production must increase sufficiently to enable us to maintain steady supplies, so as to promote a large trade. Up to the present the overseas business has been more or less spasmodic in nature and some of our markets have been lost owing to lack of suitable shipping space.

"With a view to illustrating the possibilities of development of markets we have published a map of the world, showing the markets which have already had our fruits and which are continually asking for more.

"Australia and New Zealand are in a unique position with regard to the markets of the old world, as by the time it is possible for Australasian apples to arrive on the English markets, there is a shortage of fruit there, the American season having practically ended, and the English early summer fruits being not then available. The export trade in Australasian fruits has developed on sound lines, and it would appear there is room for a considerable expanse in this business."

Nearly half the book is given up to the record pages. These pages make up a very satisfactory blank book for keeping account of stock on hand, purchasing accounts, sales accounts, and in fact a complete bookkeeping system.

## BANK CREDIT AND AGRICULTURE

"Bank Credit and Agriculture Under the National and Federal Reserve Banking System," by Ivan Wright, assistant professor of economics, college of commerce, University of Illinois, published by McGraw-Hill Book Company, 370 Seventh Avenue, New York.

Before banks were agriculture was, so we wish the title of this book might have been reversed and could have stood "Agriculture and Bank Credit." However, that may be only a personal idiosyncrasy. It is a wonderfully informing book. The author says in its preface:

"The object of this book is to outline the conditions of the bank credit situation in relation to American agriculture under the national and federal reserve banking systems. It seems necessary to set forth briefly in Part I some of the short term credit needs of agriculture, without special regard to any particular banking system or institution, except for the purposes of explanation and illustration. Part II will consist of a brief history and analysis of the short term agricultural credit conditions under the national banking system with special consideration of the legal and economic restrictions, and the seasonal movements of currency. Part III will take up an investigation of the federal reserve system in relation to short term agricultural credit. Consideration will be given to the provisions for short term agricultural credit, and the ways in which the system has functioned in relation to agriculture, and the livestock industry.

"It is not the purpose of this book to argue the case either for or against agriculture, but rather to analyze the needs for and conditions of short term agricultural credit under the existing banking systems.

"This volume is a simplified and condensed presentation of the bank credit section of research investigations conducted by the author into the problems of agricultural finance."

There are in its three parts 21 chapters touching, amongst other things, upon early development of national banking system, rural credit, legal and economic restrictions, seasonal inelasticity, movements of cash between geographical districts, short term credit, provisions for short term credit under federal reserve act, how the federal reserve has functioned, variation in paper rediscounted, discount rates, average rates charged, how the farmer and the country bank proceed to use the facilities offered by the federal reserve, criticisms of federal reserve, etc. The book has little to do with the federal farm loan though it does give seven pages in the appendix to a short statement of its method of functioning. The appendix also touches upon war finance corporation, Credit Foncier, Credit Agricole, financing farmers in England, German Landschaft, cooperative banks in agricultural districts of Canada, Raiffeisen banks.

## ONIONS PROFITABLE CROP THIS SEASON

By J. C. Archias

Each season the average grower is looking around for some crop that will not be overdone for the season. As a rule where any one crop has been more or less of a failure for the past several seasons it is shunned by everyone, each year the planting diminishing until it becomes so light that there is an abnormal price offered for the product at the end of the season, and the next year everyone rushes in to plant. Consequently the market is flooded and there is another lack of profit.

Crystal Wax and White Bermudas are leading up to this state at present. Imperial Valley and Coachella Valley have been one of the largest producers of Wax and Bermuda onions in the West for a number of years, but their production has been more or less overdone, particularly because many of the growers gather the onions in the green state in order to catch the early market. Owing to losses in the past few seasons the onion growers have become discouraged and after making a close canvass of the situation for this season, it is safe to say that Coachella Valley will plant less than 50 per cent of its usual acreage and Imperial Valley less than 25 per cent. The man who will plant onions should have the benefit of at least 75 per cent advantage over the past seasons for market and price. Onions look better for profit the coming season than any other crop in the valley. The usual planting in Imperial Valley is made any time during the month of October, planting about two pounds of seed to the acre on double ridges in medium soil. A few acres of onions is a safe gamble for next season.

## DATES IN TEXAS

Texas is becoming interested in the culture of dates. Report comes from Frank C. Patten of Galveston of a successful experiment in pollination which made possible the production of a few bunches. It is hardly possible that conditions so near gulf influence could in any way be similar to those in the Coachella Valley in this state where the date is being produced so successfully. Of course it is possible that a date may be developed which will do well under conditions different from those in its native country. Regarding one experiment made Mr. Patten writes:

"We have learned of a successful experiment at Houston, about 50 miles from here, in growing dates. A tree about ten years old was pollenized by hand last spring by Harvey C. Stiles, an expert horticulturist of Columbia, Texas. This tree had five large bunches of delicious dates on it this year. Through Mr. Stiles I have obtained one bunch which I have been exhibiting in the corridor of the Rosenberg library in connection with a Galveston bunch of dates where there had been no pollenization, and it has aroused a good deal of interest. Mr. Stiles tells us that our numerous date trees in Galveston will bear good fruit, he believes, if pollenization is properly attended to when the trees blossom in February. Previous to this time we have all supposed that successful date culture was not possible here because it was thought that weather conditions were not favorable. If we can succeed in getting a lot of trees in Galveston pollenized next February it will be quite interesting to see what will come of the experiment."

## LATEST COUNT ON AUTOS IN CALIFORNIA

According to figures compiled by the Automobile Club of Southern California, there are more autos in California at this time than there were in New York on January 1 of this year.

The registration for 1921 in New York, which led all states last year, was 812,031. The registration at the present time in California is approximately 834,192.

California was fourth on the list of states for the number of automobiles registered last year, but there is a possibility that it will jump to second place this year, and if eastern states eliminate all "dead" or defunct numbers from their registration totals at the end of the year, then California may jump into the first place. The registration figures as issued in this state contain no "dead" numbers.

Ohio, Pennsylvania and New York were ahead of California last year. The total number of cars registered in this state for 1921 was 673,830, an increase of 157,362 autos in less than ten months of the year.

The increase during 1921 over 1920 for California was only 104,938. The comparison of these figures is pointed out by the auto club as indicative of the tremendous increase in cars for this state during 1922.

## REPORT ON MANAGEMENT OF PRUNE AND APRICOT GROWERS

Because of criticisms of management of the California Prune and Apricot Growers the voting board of the association last spring asked the management engineers to make examination.

The report as rendered by Engineers Leffingwell, Ream and Company was unanimously accepted by the board and brings to an end the internal dissension which threatened several months ago to overturn the association.

The general findings are:

There has been nothing found reflecting in any way on the integrity of the management.

There has been nothing found indicating that the management is incapable of administering the affairs of the association.

There have been found several instances of the management's having extricated the association from difficult situations or having made deals advantageous to the association.

There have been found indications that the management is farsighted and capable of planning ahead wisely in the best interests of the growers and the entire industry.

In short we believe the management is honest and capable and worthy of the full confidence of the members, and that if the recommendations contained in this report are carried out, the association can look forward to more economical operation, greater returns to the growers, increased harmony among the members and a more solid organization.

## The Public's Right

# Restored

## AN ANNOUNCEMENT

The Central Pacific Railway lines are to be separated from the stock ownership and operating control of the Southern Pacific Company of Kentucky, in accordance with the mandate of the United States Supreme Court of May 29, 1922. The Court's decision now goes to the United States District Court of Utah, where the details of the separation of the two properties will be formulated.

The Court's decision means the beginning of an era of active railway competition in California. This, in turn, means the opening of a period of intensive development, of growth in population and production, never before known in this State.

The Union Pacific has consistently stated that its primary interest is an independent Central Pacific for its connection at Ogden, free and untrammeled, so that it can co-operate with the Union Pacific in providing a high grade of transportation service and in aiding the development of this territory. Such co-operation will insure a transcontinental route eastward through Ogden which will provide active competition with all other transcontinental routes.

The Union Pacific henceforth purposes to develop its legitimate interests in California. It confidently relies upon the justness and fair-mindedness of the citizens of this State. It asks for nothing more.

In the view of those sincerely interested in the upbuilding of California the Supreme Court's decision is a great public victory. Transportation facilities will be increased. There can be no deterioration of those facilities. The Supreme Court has safeguarded the public interest by providing that THERE WILL BE NO DISRUPTION OF EXISTING TRAFFIC ROUTES AND SERVICE.

The basis for rates into and out of California will remain unchanged. On business between the Southern Pacific and the Central Pacific in California, the one-line basis for computing rates should be continued. The Union Pacific, if it should come into control of the Central Pacific, commits itself in advance to this policy.

There will be no non-essential duplication of facilities. But there will be legitimate and timely expansion of facilities to meet the ever-increasing public demand.

# Union Pacific System

# Crop Production

From Address by R. G. Risser before Oregon Irrigation Congress at Bend

THE first question to be raised in connection with crop production is: "What crops shall we grow?" It is a question which we ask ourselves and one which others ask us. It recurs in some places almost as often as the market takes a downward turn or at least as often as a disappointing season shakes our faith in our old standbys. But it is sometimes a baffling question, and always a question which should be answered only with a full knowledge and consideration of existing conditions. It should never be answered without due regard to the facts which affect it.

As I watch the trend of crop geography, see the production of certain crops localize and the big commercial districts successfully develop, I am tremendously impressed with one outstanding principle. And that principle is this: The large enduring districts which have achieved success and won renown for certain specialty products are those especially adapted by environment for the production of these particular crops. There is something about them which admirably fits them for the crop in question. It may be soil, climate, location with reference to markets or a combination of all which gives them a natural advantage and helps them crowd out competing districts less favorably qualified.

The most practical method of determining the adaptability of a locality for a crop is field trial. It is the most important test and should be conducted in such a way as to give definite results. But it should never be done on an extensive scale. Heavy losses have been sustained by attempting to grow some untried crop in a large way the first season. "Be sure you are right, then go ahead," applies here, but we want to emphasize the qualification, first, "be sure you are right."

Much should be said here to the credit of those enterprising individuals who introduce valuable new crops in a community. Resourceful men of this type who break away from the beaten paths of habit and tradition and strike out along original lines always deserve credit for their vision, their initiative, and their courage.

While we are speaking of the community let me offer another thought. Having demonstrated the merits and adaptability of a certain product for your district, make its production a general thing throughout the community. Growers can learn from each other in working out standard cultural practices. They can cooperate in providing tools and equipment and in getting labor. By their combined production and thorough collective action in advertising, they can build up a wide reputation for their output which they could not do singlehanded.

Crop production should not be considered merely as a matter of selecting and growing a certain crop. It should be looked at in its larger aspects and considered as a system. For this reason there should be a very definite and comprehensive plan or program for cropping, and this plan or program should have certain characteristics which will make for orderly and sensible production.

The first requirement for a satisfactory crop program is a diversity of crops. Sections devoted to one or two crops have seldom been a permanent success. There are many instances all over the country where a one crop plan has not worked out well, and there are sound reasons why it should not work out wel'. There are many advantages of having more than one crop. It reduces the loss in case of failure of a crop. It distributes labor and income throughout the season, and reduces the speculative element in farming.

Along with the diversity of crops there should be a definite system of crop rotation. Crops should follow each other in the proper sequence, and the rotation system should be well balanced. Rotation will be of assistance in controlling weeds and pests and in maintaining the productive capacity of the land. It should include a leguminous crop for this purpose.

The cropping program should be developed by evolution rather than revolution. Sudden and violent changes are not the best policy. Indiscriminate jumping from one crop to another or from one extreme in acreage to another is not only haphazard but hazardous. A single season of high prices should not be sufficient inducement to cause one to select a particular crop and substitute it for another. The program should stabilize conditions and should be built upon a series of crops selected for generally satisfactory returns for the average season over a period of years. Then this program should be reasonably constant.

Do not misunderstand me. It is all well and good to watch market tendencies and to study causes of market fluctuations. But growers are often unduly influenced by market flurries which last for one season only and action in prices. Such changes in which are inevitably followed by a reprice as are due to temporary or seasonal conditions do not represent any general trend and are therefore an unsafe guide for planting. In the case of perishable annual crops like vegetables, at least, it is not usually advisable to make radical changes each season.

While we are dealing with cropping programs in connection with market conditions, let me say that marketing possibilities should be carefully considered when a crop is chosen. Market requirements and preferences in varieties and marketing periods should not be overlooked. The probable demand at the time in question, competitive sources of supply, and factors influencing consumption should all be known.

The possibility of adjusting production more closely to consumptive requirements deserves more attention. Overproduction and underproduction are neither desirable, and it is important that they should be avoided. Sometimes by reference to informative statistics it is possible to foresee these contingencies and prevent them. In the case of perishable products like vegetables the production during the shipping seasons of the various districts should be synchronized and coordinated systematically. It is, therefore, well to work closely with a distributing agency in making a crop program and to analyze the information secured as a basis for plans.

In conclusion we want to emphasize the importance of high yields and good quality in any production schemes advanced. Any one who figures the thing out can not fail to appreciate the necessity for heavy production and a fine marketable commodity, but average yields are so much short of possible yields that we think sometimes growers have not all taken time to compute and compare results. Make the calculations yourself on the products you grow, and perhaps you will be induced to put forth stronger efforts to break all records for past achievements in crop production.

## PEACH SCAB IN SOUTHERN CALIFORNIA

(Continued from Page 445)

As regards varieties and their relative susceptibility to scab, our observations this summer would lead us to list the important varieties locally in the following order, the first variety named being the most susceptible: Lovell, Muir, Ontario, Phillips Cling, Elberta, Sims Cling, Orange Cling, Lemon Cling. Further observation may change the order in some cases.

Owners of peach orchards where scab was bad last year should plan to protect their fruit at the proper time next year and convince themselves of the practicability of control. Of course there is the possibility that some seasons will not be as favorable for the development of scab and spray would not be much needed. On the other hand, if many infected twigs are present and if the proper conditions of moisture are present during the critical period, it is then too late to spray, and serious losses will almost surely follow.

## OVERHEAD IRRIGATION IN A SEMI-ARID CLIMATE

By A. T. Parsons

OVERHEAD irrigation of lawns and gardens is familiar to every one, and the use of similar systems in semi-humid regions for truck and other high value crops is common. It is, however, unusual for an overhead system to be installed in the interior valley of California on a farm operated on a commercial basis.

The Jane Garden Farm, about 12 miles north of Sacramento, owned by F. W. Kiesel, vice president of the

Overhead Irrigation On the Banks of the Sacramento

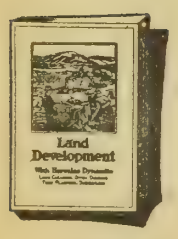
Sprinklers at work on Jane Garden Farm near the city of Sacramento. Each sprinkler is attached to the end of a 60 foot hose. Water is supplied by a Pelton pump run by electric motor.

"Let the Water Get to 'Em"

"They'd be twice the size by now if we'd loosened up this ground before. The hardpan is packed so that it cuts off most of the water.

HERCULES FARM DYNAMITE

will cure that. It requires little extra effort and does the business."



*Send for this book— It is free.*

The way blasting with Hercules Farm Dynamite should be done is explained at length in the new Hercules 75-page book "Land Development". Tree-planting, blasting between the rows, ditching, stumping and boulder blasting are treated. Photographs and diagrams help, too.

California Nursery Co.

Niles, California

Californian National Bank of Sacramento, comprises about 640 acres, directly adjacent to the Sacramento River and under the Natomas levee. With the exception of a few acres adjacent to the ranch buildings, all of the land is planted to beans which are irrigated with water pumped from the river.

Water for domestic supply, fire protection, and for irrigation of a rather extensive vegetable as well as flower garden is obtained by pumping from a well about 45 feet deep, drilled several years ago when the land was first reclaimed and cultivated. Several pumps of various types were used for this service, but the present installation has given the best service. It was installed early in the present year, an event which Mr. Kiesel now says he wishes had occured ten years earlier.

The present plant consists of a Pelton type FD 1¼ inch two stage centrifugal pump direct connected to a 7½ horsepower motor operating at 1750 R. P. M. The drawdown of the well is so small that no pit is required, the plant being placed at the ground level.

The plant pumps directly into a 1000 gallon pressure tank also at the ground level. An automatic pressure regulator manufactured by the Cutler-Hammer Co., starts the motor whenever the tank pressure drops to 30 pounds and stops it when the pressure is built up to 60 pounds again. The capacity of the pump is 5000 gallons per hour. It is interesting to note that in spite of the shallowness of the well the water is cool, about 52 degrees the year round.

About an acre and a half is devoted to a truck garden where melons, tomatoes, and miscellaneous vegetables are raised for the ranch table. A two inch pipe line from the pump runs midway of the garden throughout its length, with hydrants at regular intervals. The land is watered by sprinklers attached to 60 foot lengths of hose running each way from the hydrants. As many as four sprinklers can be used at one time. The total distance from the well to the farthest end of the garden is 750 feet, and the pressure at that point is sufficient to permit each sprinkler to cover a circle about 60 feet diameter.

Since the water is also used for domestic purposes and for irrigation, flowers, etc., no definite figures as to amount of water required for the truck garden can be obtained but, assuming a certain proportion of the total amount pumped, it seems probable that from six to ten inches deep per month is applied through the growing season. The condition of the various crops indicates that whatever amount is applied is sufficient.

An important consideration in the selection of the present plant was the provision of adequate fire protection. Two-inch pipe lines run to all buildings and the pressure maintained at all times is sufficient to throw a stream over any building. A line is also to be laid to a corrugated iron and frame warehouse for beans, situated on the levee, about 300 feet from the pump. Mr. Kiesel has so much confidence in the reliability of his present pumping system that he expects to discontinue insurance on the warehouse as soon as this line is installed.

# Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When queries are wished in Cultivator address query to 317 Central Ave., Los Angeles.

### Changing Water Course

Over the land of a neighbor a small creek meanders. It crosses a small corner of my place. Can the neighbor change the course of this creek so that it runs in a straight line full length of my boundary line? The land is sandy and loose and the creek undoubtedly will wash out and cause my fences to fall and bank to cave in.—Subscriber, Sebastopol.

The neighbor would be entitled to straighten the course of the stream upon his own land and conduct it along the line providing he take measures so that the water will not cut the bank or injure your fences. This can be done by confining the stream in a concrete ditch or other reasonable method of maintaining the banks. If this is not done, however, you undoubtedly would be entitled to whatever damage may be incurred by reason of the falling in of the ditches and cave in of your bank.

### Check—Will

I do not desire to make a will but wish to leave a certain amount of money to a small child. Can I give an undated check at the present time, this check to be placed in a safety deposit box and cashed after my death? Can money be drawn from the savings bank by ordinary check?—Subscriber, Covina.

Such method of operation would be invalid, as one of the essentials of a gift is actual delivery. In this instance there is no delivery or even semblance of delivery. If there is no delivery during the lifetime of the donor the check would be simply without any consideration and it would be the duty of any administrator to reject it. Under the inheritance tax laws the bank is presumed, upon notice of the death of a party, to refuse to honor a check given during his lifetime. The purpose of this is to preserve the estate so that the full amount of the inheritance tax be paid. Under the contract whereby a person puts money in the savings bank it is required to give certain notice of its withdrawal and to present the bankbook at the time of the withdrawal.

### Access to Highway

I own 20 acres with 100 foot frontage on a highway. There is a triangular piece between a portion of my land and the highway. I wish to sell certain land which does not border upon the highway. Can the person to whom I sell cut a road through the triangular piece to the highway?—Subscriber, Anaheim.

The law gives to a person who sells land entirely surrounded by his own land what is termed a right of way by necessity, as it presumes that the vendor intended to give to the vendee a right of ingress and egress to the land sold. This right must be exercised along the nearest direct way to the highway. If, however, there are other means of access, the vendee cannot arbitrarily say just where he wishes to have this egress. This right, of course, does not appear if the land is owned by third parties, so that it would depend upon whether the triangular piece is owned by third parties and whether the vendee will have right of access to some other road. In either event he would not be entitled to cut the road as desired. If he is entirely surrounded by lands of other parties and his only right is over the land of the vendor, he might cut the way through the land of the vendor to allow it to touch the highway.

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Grapes on Adobe

What kind of grapes do best on adobe land?—Subscriber.

The planting of grapes on "dobe" is a questionable undertaking. Almost all varieties will thrive better on land of a different type. Heavy soils are in addition generally believed to be more susceptible to general infestations by grape phylloxera, a tiny root louse which is a very serious root pest in many districts. It is probable that this is due to the fact that distribution is more rapid in such soils because of the cracking following irrigation providing a means of travel from one root or vine to another. So far as culture is concerned the objections to "dobe" soil for grapes are the same as for other fruits in that the proper handling of such soils is difficult and requires an application to detail not necessary on the lighter soils. If, however, one must plant grapes on such soils the Emperor will do as well as any of the common varieties, provided of course climatic and other conditions are favorable to a product of this kind. —F. K. H.

### Pear Blight

I am enclosing badly defective leaves from pear tree. Can you tell me the cause?—Subscriber, Lancaster.

See answer to similar question by James Mills, Jr., in issue of February 12, 1921, page 197.

### An Acre

Is 208⅓x208⅓ feet an acre of land? —Subscriber, Gardena.

No, there are 43,560 square feet or 4,840 square yards or 160 square rods in an acre. A plot 208⅓ feet square contains a fraction over 43,402 square feet. A square with its sides 208.7103 feet long contains within two hundredths of a square foot of an acre.

### Enlarged Gall Sac

We had a rabbit die and on examining it found its gall sac twice as large as it should be and very hard. What is cause and cure?—Subscriber, Lomita.

The conditions set forth in this case are very rare and can not be cured as no one can know of it until animal is killed. Oftimes a stricture or obstruction comes in mouth of gall bag and this causes enlargement, and as it can not discharge readily it hardens. This is the second case the writer has come in touch with in many years.—W. D. W.

### Call the Vigilance Committee

Now for another appeal to the public:

About three weeks ago a hunter was ordered off a rancher's place in this neighborhood and for retaliation set fire to the timber below this man's house. This fire burned over about 5000 acres and destroyed two ranch homes. By hard work other homes were saved. Much timber was destroyed.

About six miles from this fire another was started, burning over about 4000 acres, burning two more ranch homes. One was occupied by a man and his 82 year old mother. They had just sat down to dinner when the fire swept up the ridge and before they could save a thing they had to run for their lives. Even the dog was burned. The whole neighborhood turned out and fought the fire for about three weeks. It is raining now so the fires are out.

We like to see the hunters enjoy themselves but have a little respect for us "hill billies."—Subscriber, Etersburg.

### Ragged Robins

Please inform me through your paper if you know of any nursery where I can get the Ragged Robin rose bushes. I have several seed catalogues and none have the mentioned rose.—Subscriber Morganhill.

We think any nurseryman carrying an ad in the California Cultivator can supply you. In case they can not one may take ripe wood cuttings from a bush which is entirely dormant, say in November or December, make cutting of wood size of lead pencil, set in sandy soil two-thirds of the length of a 12 inch cutting, water occasionally.

### Grapes and Figs

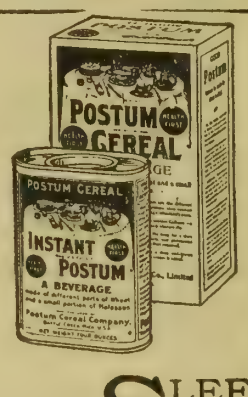
I have some ground in Alpaugh, Tulare County, loamy soil, some shell. The loam is about four feet deep under which is a kind of gumbo. Alfalfa does exceptionally well, the ground holding the moisture very well on account of the gumbo underneath. Will Alicante grapes and Kadota figs thrive on this soil? Are the Alicante and the Alicante Bouschet grapes the same? What tree or grape would you suggest if the above mentioned will not do?—Subscriber, Anaheim.

We doubt very much the advisability of planting either Alicante grapes or Kadota figs in the district you mention. The hard clay subsoil in the Tulare Lake district has quite effectively prevented the extensive planting of trees and vines in that district. There are, of course, certain areas in the district in general which might prove to be satisfactory for fruits but unless there was considerable acreage developed shipping facilities, especially for the fresh varieties you mention, would be difficult to secure because acreage would not be sufficient to load car lots. Alicante and Alicante Bouschet are names for the same grape. For more definite information regarding the advisability of planting on your particular land would suggest that you get in touch with your local farm adviser or horticultural commissioner.—F. K. H.

### Temperatures Affecting Grapes

How low a temperature will Zinfandel and Alicante Bouschet stand? Our temperatures here range as low as 8 above zero.—Subscriber, Hinkley.

Perfectly dormant grapevines would probably successfully withstand the winter temperatures mentioned It appears to us that your problem would be whether your growing season is long enough to mature the crop and whether late spring or early fall frosts are prevalent. Damage is usually caused by untimely frosts when the vines are in a growing condition. A careful study of the temperature records for your district compared with the dates when growth normally starts is advised.—F. K. H.



Try the Grocer, first!

SLEEPLESS nights and daytime irritation, when caused by coffee drinking, often require a call on the grocer to avoid a later call on the doctor.

Postum, instead of coffee, has brought restful nights and brighter days for thousands of people—together with complete satisfaction to taste.

You will enjoy the full, rich flavor and aroma of Postum, and nerves will be free from any possibility of irritation from coffee's drug, caffeine. You can begin the test today with an order to your grocer.

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

Postum *for* Health

*"There's a Reason"*

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

opinion you would get much more satisfactory results by taking out your apple trees and planting pears grown on their own root. At first thought this would seem to be a waste of time as well as trees but it is better to do it now than to spend money experimenting and then after two or three years find that the experiment was a failure and the trees have to be pulled out after all. Grafting is the best method of working over deciduous trees and, in the case of your yearling apples, it would be best to cut off the entire top and insert the grafts in straight stock.

### Stocks for Walnuts

What is the most desirable way to raise English walnuts? Shall we graft on root of the Northern California black walnut seedling or wait till the second or third year growth and graft the limbs? We have been told that by using the native northern walnut we have a tree that is quite resistant to disease and sunburn. What can you tell us about this?—Subscriber, Chico.

The northern California native black walnut is generally preferred as a stock on which to bud or graft the California walnut. As a rule, the plan followed is to grow in nursery row until the bud or graft is a year old then plant in orchard form, choosing trees of uniform vigor and size, and this results in a far more uniform orchard than can be secured by planting seed in their permanent place and grafting when three or four years old. The cost of cultivation and care of trees set 50 or 60 feet apart is so great that uniformity adds to the economy of growing in the nursery row or buying trees from established nursery. Blight resistance is not secured so effectively by the use of root stocks as by the use of scions from resistant trees.

### Tank of Toilet

I have seen a lot of useful information in the Cultivator since I've been a subscriber and now I would like a little more. To my toilet I have a high tank, white enamled, and iron rust from the water has worked out over the top and is now going down over the front and sides. In spite of all my labors with almost all kinds of powders there seems to be no stop to it. Can you suggest anything that I can do to stop it from spreading any further?—Subscriber, Los Angeles.

It would be hard to recommend anything which would restore the natural color of enamel which might not endanger its entire removal. Presumably the tank fills too near the top and needs adjusting of the water supply. These tanks usually have a zinc or copper lining and there should be no such staining or marking as the subscriber suggests. It is possible the float has rusted and may have taken in sufficient water that it fails to raise it sufficiently to shut off the flow which may cause the water to remain at too great a height from the box.

### June Drop

Two years ago wind whipped leaves off orange trees. Navels set but drop off when some are large as marbles. After they have matured fruit is all on one side of trees. Trees are not watered but look very healthy.—Subscriber, Vacaville.

This is probably a case of June drop which has been so thoroughly discussed many times in former Cultivators that a discussion at this time of the year would have little general interest. A hint at this time, however, may be in order, and that is that with the approach of another blossoming season the trees should be in the very best of condition with plenty of moisture at the roots. Some think that additional protection is secured by having the ground covered with a growing crop to prevent heating of the soil under the hot wave which usually precedes the June drop.

### Replanting Apple Trees.

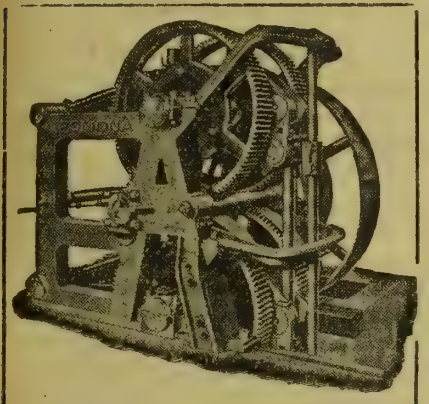
I have a neighbor who has a nice lot of coming two year old apple trees. He bought them to take up in what we call big pine timber or the higher mountains, and failed to get them up there last fall. They have made a good growth. He is afraid to take them up this fall for fear he will take codling moth up with them which is in a summer apple near where they are planted. What do you advise? Isn't the codling moth egg only laid in the flower of trees as they bloom? Could these trees be sprayed and moved successfully, and if so what are the ingredients?—Subscriber, Maxwell.

If by two years old the inquirer means that trees have two years growth of bud on one year root—which means that the root is three years old—we would advise discarding the trees and purchasing new ones rather than resetting. Nurserymen burn thousands of trees every year rather than hold them over for it is difficult to make old deciduous nursery trees into a successful orchard. As to carrying codling moth that is hardly probable, though the orchardist must bear in mind that the codling moth lives the year through, though at this period of the year it may be hidden in the crevices of fruit boxes, in the rough places in the bark of trees or any convenient protected hiding place. It is in the pupal form and hidden by its little case or cocoon. About apple blossom time it escapes from this case in the form of a moth and proceeds to deposit eggs on the blossom ends of the forming apple or pear. The wormy apple crop is then started unless the spray pump has been brought into requisition. Therefore apple growers should exercise caution in moving boxes, trees or any possible carriers of this pest into an orchard section.

### Kadota Figs

In your issue of October 7 a subscriber wanted to know what is the reason his Kadota figs fall off. If they are Kadotas and not Calimyrnas, the only reason I know of is lack of water. I have never seen a Kadota tree in fresh young condition but held its figs to ripening and have never seen one injured by having too much fruit. Keep the ground moist and they will grow both wood and fruit in plenty.—N. E. Beckwith, Reedley.

The Northern California Wool Growers Association will hold annual meet in Red Bluff Saturday, October 28.



# THE POMONA

## Duplex Plunger Deep Well Pumps

are solving the pumping problems for many users during the period of low water levels. They will lift the water to the surface, and, if desired, deliver it to high elevations above ground and at lower power cost than any other system of pumping water.

### THE LAUGHING FOOL

The world admires the kindly man
Who grins and does the best he can,
But there's a time a laughing face
Is absolutely out of place—
A time when for a little while
It doesn't pay to wear a smile.

Bill Green had heard "The man who grins
Is usually the man who wins,"
And so unto himself he said:
"I'll laugh until the day I'm dead,
When trials come and things go wrong,
I'll laugh and chuckle right along."

While working in a china store,
One day Bill dropped upon the floor
A costly vase of rare design,
Which crashed just like a bursting mine.
It made his boss exceeding hot
To see the ruin Bill had wrought.

"You blundering fool!" the boss exclaimed,
The while in rage his visage flamed;
"Your careless hands have now let fall
The most expensive vase of all,
A model of the potter's craft!"
And Bill looked up at him and laughed.

A second later through the door
Of that once peaceful china store
A flying human form was seen;
We recognized as William Green,
Belabored by an angry chief
Intent on bringing him to grief.

Later, when calm had settled down,
The chief explained to all the town
That he had kicked Bill from his place
For laughing boldly in his face.
Which goes to prove the man who wins
Is not always the man who grins.—Edgar A. Guest.

### THE THREE GIFTS

(Continued from Last Week)

Each morning Claudius climbed the hill that he might look down upon the scene he was painting. With deft fingers he mixed the shadowy greeens for the birch trees and the grass, and with clever, careful brush he pictured the smiling sky and the gracious beauty of the palace.

But when the long shadows fell and evening came Claudius would hurry eagerly to the palace for he knew that the little maid would be waiting with strawberries in a great glass bowl and tiny rolls and something savory and hot in a covered dish, which she herself had prepared. They would laugh while she mixed the salad, though her face was a bit wistful now, and Claudius would sigh with content when at last they sat down before the table.

Each night while they ate Claudius told of his city and his days at school and even of his dogs for whom he was lonely so soon. But while he talked and watched the tender face of the little maid a vague sadness would steal over him for surely she was as gentle and as charming and as beautiful as any girl could be.

At last the week ended and the gift was finished. The little maid clasped her hands and shivered as she looked at it for there was the valley with its little walks and glens in wavering green and brown. There too were the kindly trees bending over the pillared verandas. An azure sky arched above the palace dome. Here and there a lacy curtain fluttered from an open window, or seemed to flutter. In a splash of gold and red and lavender the flower gardens bloomed again.

The little maid turned to leave the room. Claudius caught her hands in his and looked into her face.

"Ah, child, if only there were no Sun Princess in all the world.—But, alas, it is time to think of other things—"

The patient voice of the little maid broke in, "At the sunset hour the princess will wait upon the balcony in the upper room. There she will gaze upon your gift. If it pleases her she will descend to you. If her heart is not touched she will not move and you have failed."

Claudius found the upper room at sunset as his brother had found it. The same rich, faint light came from the painted swinging vases and on the balcony sat the Sun Princess enveloped in cloudy white. Claudius gazed for a moment and thought she must be wondrous fair, then proudly he lifted his gift to the lighted dais which had been prepared for it and waited with humbly lowered head for the Sun Princess to descend.

After many minutes Claudius lifted his head. The splendor of his gift seemed to light the center of the room and he turned proudly to either side to welcome the princess. Then he gazed, incredulous, toward the balcony. The princess had not moved. The dim and lovely face in its mist of white was as unmoved as a quiet pool. The gift had failed.

After his anger had passed Claudius searched the palace for the little maid to comfort him, but she had disappeared and at sunrise he rode over the mountains alone.

The third brother, Constant, did not arrive at the palace till many weeks later, and he came alone. He had chosen to linger on the mountains and in the valleys and he came with his pockets full of precious seeds and rare herbs. He stopped on the hill and looked down at the palace like a spreading white flower in the green and sunlit valley and his blue eyes grew tender with love and wonder at the sight.

Constant had lunched on berries and mountain fruits and a few hours before he had broiled a monster trout over the coals of his camp fire so the banquet which the Sun Princess had had prepared was not tasted and instead the little maid served under the apple trees a modest supper of bread and milk and cinnamon cookies.

When Aurelia's note was handed to him he whistled absently and began to search through all his pockets. Then he looked up into the face of the little maid and smiled.

"I brought, as my gift to the princess, my mother's wedding ring, but I remember now that it fell from my pocket into a mountain torrent. However, I see that it is just as well for she has given me a week to find a gift."

He reached for the topmost cooky and gazed with contented eyes at the wonders of the garden.

The next morning Constant was the second to awaken, and the little maid, hurrying breakfast, came flushed and smiling to find him sorting seeds on the damask of the dining table.

Together they breakfasted at the farthest end of the table and together they laughed over the grounds in the coffee and the popovers which had not popped. They finished on jam and biscuits from a tin and went out to look at the giant chrysanthemums which were just opening in the garden.

Over in the garden's richest spot Constant pointed out a tiny plant which had not been there the day before.

"It doesn't look like much," he said, blushing. "I planted it at dusk last night and I'm afraid the flower it bears will have to be my gift to the sun princess for I have nothing else."

The little maid, looking closely, saw that the leaves of the plant were bruised as though it had been carried in a pocket, but even as they watched it was taking heart from the earth and the dew and the splendid sunshine and straightening its leaves to a smoother, deeper green. Curled up among the leaves, too, was a large and delicate bud.

"I saw no flowers like it that had opened," said Constant, wondering about the color of the little maid's hair under her close white cap. "But I wish you had been there with me to drink the perfume which came from all the plants like this. The bud should open into something very lovely."

And so the week passed. At not long after dawn the two breakfasted and were out to tend the gift plant which daily was growing stronger and glossier in the cradling sunshine. The bud was rising on a long and slender stem and it had grown so large that every morning when they left the plant and hurried toward the forest or the dale for their gay tramp, the little maid would look back one last time, fearing that the bud had bloomed.

Returning, tired, at evening time, Constant and the little maid would bend again over the plant and rejoice to see how it had grown. Then into the coziest room they would stroll contentedly and Constant would build a fire on the hearth so that the little maid could toast thin slices of bread and he could broil the steak.

At last the week ended and the gift plant bloomed. They found the flower when they came home early, silently from the wood, but long before they found it they knew that it had opened for the garden held a rich new perfume. The little maid bent over and touched it with her lips—a deeply purple blossom with shining gold at its heart and the sweetness of a thousand violets poured into one.

The little maid lifted her face and began patiently,

"At the sunset hour the princess will wait upon the balcony in—"

But Constant bent and picked the gift flower and enclosed its stem in the right hand of the little maid. Then he stopped her words with his lips.

"Sweetheart, did you think there could ever be anyone else! What am I to the Sun Princess—and what is she to me! Come, we will leave together."

And with eyes star-like with rapture the little maid took Constant by the hand and led him to the upper room. The same rich, faint light came from the painted swinging vases and on the balcony sat a figure enveloped in cloudy white. They stood before her.

In bewilderment Constant opened his lips to tell the Sun Princess that he loved another, for no one had spoken and the silence was unbearable. Then like a flash the crystal chandeliers in the room burst into light and Constant moving another step toward the white figure, stopped in amazement for he saw that she was neither girl nor Sun Princess but just a lovely doll with raiment of cloudy chiffon.

The little maid touched his arm timidly and he turned toward her. Her cap was off and he saw that everything about her was like the sunlight. Her hair was threads of dancing gold. Her eyes were deep and bright. Her white skin was pure and radiant.

### HOUSEHOLD QUERIES

**Jam Without Sugar**

Will you tell me, through the columns of your paper if it is possible to make jam without sugar by using sweet fruits such as figs and sweet prune plums so it will keep several months?—Subscriber, Arcadia.

Prof. Cruess writes that he does not consider it advisable to attempt "to make a syrup for canning purposes from grapes. However, we find that an excellent jam can be made by stewing grapes until soft, rubbing them through a screen to remove seeds and skins, combining the pulp so obtained with other fruit pulp and cooking to a jam consistency." Fruits thoroughly ripened so that they contain maximum amount of sugar may be canned successfully without addition of any sugar, keeping perfectly and being more pleasing to many tastes than where sugar is added. "Sugar Saving Suggestions" issued by the University of California during war times and revised by Prof. Cruess in June 1920 suggests that corn syrup or honey may be used instead of sugar, two-thirds cup syrup being equivalent to one cup sugar. Also addition of a little salt makes jams palatable with less sugar. One-quarter ounce salt to each six ounces sugar to each pound of fruit is recommended.

**Chayotes**

Can you tell me any way of cooking chayotes?—Subscriber.

The one important thing to remember in cooking chayotes is that the young tender ones cook quickly but the older hard ones must cook longer until thoroughly done. They are delicious if properly cooked.

Chayote Soup.—Make like potato soup. Split chayote in halves, peel, slice thinly or run through food chopper, using coarse knife. Put tablespoon butter, drippings or fat of any kind in stew pan. Add chayote, cover tightly and cook over medium fire five minutes or until dry, then add little boiling water and cook till done. Add

salt and pepper to taste, milk and fine cut parsley, garlic or onion as liked. A left over of sour cream may be added when ready to serve or a little grated cheese. Some like the addition of one or two eggs, beaten whole, put into the soup when boiling briskly (add slowly to keep boiling all the time) just before serving. The egg cooks so quickly that it forms in little straws.

Creamed—Prepare as for soup above, cutting in thin slices. Cook in same way. When soft season with salt, pepper, butter or sour cream and little milk.

Fried—Cut in thin slices or sticks, dip in beaten egg and cracker crumbs, season with salt and pepper and cook in fat like egg plant or squash.

Batter Cakes—Grind fine one cup chayote and add to hot cake batter. This is an easily remembered batter recipe: One cup flour, 1 egg, 1 cup milk, 1 teapsoon baking powder, 1 teaspoon sugar. Cook as ordinary hot cakes.

Salad—Cooked chayotes combine very nicely in salad if carefully dried in cooking. Don't use them wet or soggy. Use like potato. Combine with cold boiled egg, little onion and add salad dressing. The very young tender ones, the size of a plum, may be sliced raw and used as cucumbers.

### To Clean Paint Brushes

Is there any way to clean paint brushes really satisfactorily? I have used turpentine but it doesn't take the paint out. Perhaps the quality of the turpentine is poor, but after days of soaking the paint still sticks.—Subscriber, Alhambra.

There are thoroughly satisfactory paint cleaners put up ready for use which are less expensive than turpentine. These have been advertised in the Cultivator. If you do not find the advertisement we will be glad to send name and address on request. We have just been talking with a very enthusiastic young housekeeper on this subject. She and her husband have bought for their first home an old house, and because all their money has gone into the purchase price they have done the work of repainting and refinishing themselves. Every cent counted big. They found under the old house some dried paint brushes which looked as if their useful days were long past. But a neighbor told them of her successful experience in cleaning such old brushes. They tried it, reclaiming three good brushes which they have used all through their refinishing work. The dollars saved have gone into purchase of enamels and varnishes for renewing some castaway chairs also found under the old house.

### Coffee Cake—Fig Bars

Would you kindly publish a recipe for making fig bar cookies in the Cultivator, also recipes for good coffee cake made from yeast?—Subscriber, Sacramento.

Coffee Cake—Three-quarters cup milk, ½ cup melted shortening, ½ cake yeast, 1 teaspoon salt, 2 eggs, 1 cup sugar, 1 teaspoon lemon extract, ¼ cup chopped walnut meats, flour. Heat milk slightly then add flour to make batter and yeast dissolved in little lukewarm water. Allow to rise until light, then add shortening, eggs well beaten, sugar, lemon, salt, and enough flour to make stiff dough. Knead ten minutes and let rise until light. Place in greased pan and let rise again. Spread with melted shortening and sprinkle with sugar, cinnamon and nuts. Bake in hot oven half an hour. Sufficient for one large loaf.

Fig Bars—Boil together 1 cup chopped figs, ¼ cup sugar, ½ cup water, a small piece of butter, 1 teaspoon flour, a little lemon juice; let it cool; cream together 1 cup sugar, ½ cup shortening, add 1 egg, ½ cup milk, 1 teaspoon vanilla, sift together about 3 1/3 cups flour, ½ teaspoon salt, 1 teaspoon each of soda and baking powder; add to creamed mixture; divide in two, roll thin, spread fig mixture on one, cover with the other, press gently, cut in shapes desired and bake on greased tins in moderate oven.

Another—One cup sugar, 1 cup butter, ½ cup milk, 2 eggs, 2 teaspoons baking powder, flour to roll stiff. Bake in one sheet, or you may cut into four inch squares. Roll out very thin and bake in hot oven.

Fig Filling—One cup sugar, ¼ cup water boiled to crack stage. Run ½ pound figs through meat chopper and put into syrup while hot and beat till cool. Spread on cookies, put another on top and sprinkle with pulverized sugar.

Still Another—Two and one-half cups flour, 2½ cups rolled oats, 1 cup each butter and brown sugar, ½ cup sour milk and 1 teaspoon soda. Flour the board generously, roll thin and cut with a narrow oblong cutter. Mix ½ pound figs chopped fine, 1 cup sugar and 1 cup water and boil till smooth and thick, then add a teaspoon of vanilla, or chop fine ½ pound figs, add ¼ cup of grape juice and 2 tablespoons sugar and let boil to a paste. (Either boil the figs in water till tender or soak in water before adding the sugar.) Put a layer of fig paste between every two of the cooky dough, sandwich fashion, and bake in hot oven. When cold pack edgewise in a jar and hide the jar.

### Dried Fruits and Nuts

I enjoy your paper and especially the recipes. I want to send dried fruits and nuts back East for Christmas and would like recipes for as many tasty ways of preparing them as I can find. Enclose a splendid cake recipe.—Subscriber, Sunnyvale.

We will give as soon as possible in this department some ways of using dried fruits. Why not send to the various fruit and nut associations in California for their booklets of recipes and enclose in your Christmas packages? These are printed for advertising purposes, are distributed free and are absolutely reliable. Besides they are designed by artists and would make beautiful gifts in themselves. Write for free booklets of recipes to Sun-Maid Raisin Growers, Fresno; California Prune and Apricot Growers, San Jose; California Peach and Fig Growers, Fresno; California Walnut Growers Association, Los Angeles; California Almond Growers, 311 California Street, San Francisco; California Olive Association, Higgins Building, Los Angeles. Thank you for sending the cake recipe:

Lemon Loaf Cake—Cream together one cup butter and two cups sugar. Drop in four eggs, one at a time, but dc not beat the eggs. One cup milk, three cups flour, four level teaspoons baking powder. These are added alternately, in the ordinary way. The grated rind of a lemon furnishes flavoring. Bake in a moderate oven for about three-quarters of an hour. The temperature should be even to produce the close, fine grain given by its unbeaten eggs and the scant allowance of baking powder. This cake is excellent for keeping.

## SOME GOOD WAYS TO CONSERVE

By Mrs. L. B. Brown

### Dried Tomatoes

Pick in the morning, scald and peel, cut in halves, put in sun to dry on trays. Good for soups, stews and beans.

### Tomato Butter

Twelve pounds tomatoes, cut up after peeling, 6 pounds cooking apples, peeled, cored and sliced, 6 pounds brown sugar. Let all simmer several hours, add ground spice to suit taste. Very good on hot cakes or bread for children.

### Figs

Pick ripe ones only, let dry, flatten with hands, pack in large jars, sprinkle each layer with little sugar, pack down tight and they are ready to use in two days or any time one likes to eat between meals. They will not hurt children as cheap candy will.

### Grapes

Pick ripe and put on trays in the house and they will not dry so fast, and you will have grapes to eat when you could not get them off the vines.

### A Miner's Sour Dough

I use this all the time and we would not go back to baking powder hot cakes for anything. We also use it in our mine camp.

To make the starter—1 yeast cake dissolved in 1 pint warm water, flour to make medium batter. Let set 24 hours in warm place.

To use—Take half of starter, add 1 tablespoon brown sugar, 1 pint water, flour enough to make a good thin cake batter, add salt, 1 level teaspoon soda, beat well and bake on hot griddle. If there is any left over put in "sour dough jar" and add nothing but flour and water. Can be used every morning.

To make waffles add 1 or 2 eggs before the soda and beat hard, add soda and bake on waffle iron.

I have used each of these and I get such good pointers from the Cultivator both for the farm and home that it is no more than right that I contribute some of my favorite recipes.—Mrs. L. B. Brown, Schilling.

## WOOLEN TESTS

Hold cloth up to light; if the weave is loose and sleazy that material will not hold its shape.

Ravel out some warp; if it breaks easily the material will not wear, and unless it tears hard and leaves a rough edge the cloth is not woolen.

Wool gives off the odor of burning feathers when set afire and it burns slowly. Cotton flames and burns in a second.

## ONLY ONE WHO UNDERSTOOD

It was Daisy's twelfth birthday, and she had been given a silver thimble. Her friends admired the gift, but Daisy kept her sentiments to herself. In the evening a very human aunt was shown the useful present.

"Poor child!" was her only comment.

"Those are the first words of sympathy I've had today" said Daisy—and her pent-up feelings found relief in tears!

## WILL TO WIN NEEDED

The line between failure and success is so fine that we scarcely know when we pass it; so fine that we are often on the line and do not know it. How many a man has throw up his hands at a time when a little more patience would have achieved success. —Elbert Hubbard.

## SIGN OF HOMEMAKER

Samantha says: When the children have good manners, you can be sure that the mother is more than a housekeeper; she's a homemaker.

The deepest point reached in deep sea sounding is 32,078 feet in the Pacific Ocean near the Island of Mindanao, Philippines.

The lowest point of land in the United States is Death Valley which is over 300 feet below sea level.

The intensity of brightest moonlight is less than 1-500,000 that of sunlight.

Money will buy a dog, but only love will make him wag his tail.

## Oil Light Beats Electric or Gas

BURNS 94% AIR

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

### NEW RAISIN RECIPES

A new raisin recipe book is being mailed by the Sun-Maid Growers. Here are four "samples": No doubt the book will be sent to any Cultivator reader on request to Sales Department, Sun-Maid Raisin Growers, Fresno.

**Raisin Cream Cheese Salad**

1 cream cheese, ½ cup chopped Sun-Maid raisins, 3 tablespoons cream, 1 teaspoon salt, ⅛ teaspoon paprika, lettuce, salad dressing. Mix cheese, raisins and cream to a paste. Season with salt and paprika. Form into balls the size of a hickory nut. Press a whole large raisin on each side. Serve three or four balls on crisp lettuce leaves. Serve with either mayonnaise or French dressing.

**Devil's Food Cake**

1 tablespoon butter or shortening, 1 cup sugar, 1 egg yolk, 2 squares unsweetened chocolate, ½ cup boiling water, 1½ cups flour, ¾ cup Sun-Maid seeded raisins, 1 teaspoon baking powder, 1 teaspoon soda, ⅛ teaspoon salt, ½ cup sour milk or buttermilk, 1 stiffly beaten egg white. Cream butter and add sugar slowly, creaming them together. Add beaten egg yolk. Melt chocolate in boiling water then flour, baking powder, soda and salt add. Beat until well mixed. Sift together and add alternately with the milk. Add vanilla and plumped raisins. Fold in egg white, pour into greased shallow pan and bake in a moderate oven 35 to 40 minutes. Cover with frosting or if desired serve with whipped cream.

**Raisin Biscuit**

1 egg, ¾ cup milk, 2 tablespoons sugar, 5 tablespoons melted shortening, 1 teaspoon salt, 4 cups flour, 3 teaspoons baking powder, 1 cup Sun-Maid seedless raisins. Beat egg; blend the egg and shortening and dissolve sugar. Add flour and baking powder sifted together, to egg mixture, and work to a dough. Add raisins and turn mixture on a slightly floured board and roll out one-half inch thick. Cut and bake in hot oven for fifteen minutes.

**Raisin Custard Pudding**

2 cups milk, ½ cup sugar, ¾ teaspoon salt, 3 tablespoons flour, 2 eggs, ½ cup Sun-Maid raisins, ½ teaspoon vanilla. Heat 1½ cups milk. Mix sugar, salt and flour with remaining ½ cup cold milk. Add to hot milk, stirring constantly and cook in double boiler until mixture thickens. Remove from fire. Add beaten eggs, raisins and vanilla. Pour into greased baking dish and bake in slow oven 30 to 40 minutes until pudding is firm. Serve hot or cold, with or without whipped cream.

# Sheep for the Small Farm

By A. L. Spellmeyer

FOURTEEN months ago good ewes sold near Los Angeles at $1.50 per head and I offered these sheep, 4,000 of them, to 100 men without getting a taker, and then they sold in three bunches to various men, ewes for $1.50, and about $2,25 for lambs and yearlings. Those $1.50 ewes would have had $2.50 worth of wool and $8 lambs and be easily sold today for $11, and this means outside of expense $21.50, for the ewe one had to beg a sale for at $1.50.

The sheep business has come back and is once more looked upon with favor by banks and bond houses, and it would not be difficult to chattel sheep now up to $6 for breeding ewes where 14 months ago one could not borrow a dime on them. If you are out to buy breeding ewes they will cost from $10 to $12 without range. If you want to buy a ewe lamb it will cost you $8 for the few offered. You can't get them on the fat market for the great bulk of ewe lambs are being reserved to fill depleted herds.

Feeder lambs sell by weight without cut to 11 cents that go 65 to 70 pounds average and some are selling on the Middle West market at $4.75 per cwt. Colorado and other feeders have bought millions of lambs to feed, and these lambs are standing close to 13 cents or up delivered to the feed yards, so a 16 to 18 cent winter live lamb price is certain or some people are going to lose many millions of dollars.

The depression that existed 14 months ago among both sheepmen and their finance backing was remarkable for the fact that such a market condition and such a state of mind could pervade a producing industry that was based upon staple food and clothing, and in the sheep industry which by proven census had already shown increasing shortage and lack of supply as to meat and wool demand. It is easy now to see the essential value of sheep, and later it will be as easy to see backward the value of cattle. Sheep you will admit have pased a test and risen to their level, so for the purpose I am going to outline I will write about sheep for the small farmer instead of cattle for the small farmer.

Here in California we have many small ranches, 40 acres, 60 or even 20 in alfalfa. Near every small ranch there are vacant fields and unplowed acreage that will provide at small or no cost a considerable grazing for a limited number of sheep. On every alfalfa ranch there is a need for ditches and borders to be cleaned up, and sheep do this nicely. Part of the year when hay is not fit to cut it still will provide green feed for sheep. At other times hay is spoiled that could be used by sheep. I am not talking theory for I know a San Joaquin farmer who made $700 from a little bunch of 60 sheep in one year.

Almost any 50 acres of alfalfa will feed 100 sheep on waste borders and nearby available untilled land. Sheep can be tended by a boy in playtime or a good dog, and fences are not required. At night they can be corraled and valuable fertilizer result from that operation.

One hundred pure bred ewes run properly should have 100 per cent lambing or better, and this would mean now 50 bucks at the prevailing $40 per head price for good ram stock and at least $15 for such quality ewe lambs. One hundred ordinary ewes should pay on present prices run on a farm at least $3 for wool, which a man can shear in two days, and 100 lambs at $8 or a $1100 total per year. One hundred acres of alfalfa should care in fine shape for 500 ewes, and some will do far better than that. Sheep will pay as much as the hay pays in some districts and do it with less outlay of labor and care. There is profit in sheep on the small farm.

# High School Judging Contest

Nearly a hundred boys with their teachers gathered at the Southern California fair on the opening day to participate in the judging contest for the southern part of the state. The high teams met teams from the Northern and Central parts of the state at Davis on October 27. The winning team in this contest will be sent to Portland to judge against boys from all over the West.

Classes of horses, sheep, hogs, beef and dairy cattle were judged and the result shows that the winning teams have gone into the subject as though it was a business. Nearly a year ago teams from the winning schools stood in the same relative positions in a big contest at Chaffey High School.

The contest was handled by Profs. Hughes and Miller from Davis, assisted by extension service men stationed in Southern California.

The value of such a contest cannot be overestimated as it brings out the manly qualities of the contestants. The boys show the results of the training by fearlessly walking up to the judges and telling them why they placed the animals as they did. Of course they made mistakes both in placing and in their reasons but their self confidence was gratifying to the men in charge. This method of teaching agriculture is of recent development and not one of the judges but who envies the youngsters their chance to become adept along all lines of livestock even before they become of college age. Chaffey Union High School at Ontario, Antelope Valley and Van Nuys were close together for first place but the Chaffey boys were more uniform in excellence and won the coveted trophy. Antelope Valley which was second will also be sent to Davis for the contest on October 27.

Winning teams—1, Chaffey Union; 2, Antelope Valley; 3, Van Nuys; 4, Pomona; 5, Hanford.

Winning boys—1, Glenmore Imbach, Van Nuys; 2, John McLaughlin, Chaffey; 3, Royal Hawkins, Pasadena; 4, Don Nelson, Hemet; 5, William Sawyer, Antelope Valley.

Draft horses—1, William Beard, Chaffey Union & Albert King, Pomona, tied with 990%; 3, Allan Grant, Lomita & William Sawyer, Antelope Valley Union, tied with 980%.

Beef cattle—1, Fred Giacomazzi, Hanford with 970%; 2, Herman Covey, Holtville, with 960%; 3, Leonard Scott, Pomona, with 950%.

Dairy cattle—1, William Beard, Chaffey Union, with 930%; 2, William Sawyer, Antelope Valley Union, with 920%; 3, Roger Sherman, Long Beach, with 910%.

Mutton sheep—1, Glenmore Imbach, Van Nuys, with 950%; 2, William Armstrong, Chaffey Union, with 920%; 3, John Ritter, Antelope Valley Union, with 860%.

Swine—1, Glenmore Imbach, Van Nuys, with 890%; 2, John McLaughlin, Chaffey Union, with 870%; 3, Arthur Younkin, Pomona and Carlos Harvey, Holtville, tied with 860%.

## LEGISLATION ON TUBERCULOSIS

At a meeting of dairymen and veterinarians of Southern California which was held in Los Angeles on October 3 matters relating to proposed legislation regarding tuberculosis in cattle were discussed with Dr. J. P. Iverson of the state department of agriculture. It was recommended that laws require the branding of all reacting grade cattle and the registration of all reacting pure breds at offices in Los Angeles and Sacramento. Thus it would be possible to know positively whether a cow has ever been a reactor or not.

Under existing laws it is not possible to force a man to test his herd and this law cannot do so either but it will provide that in case he does test, then branding and registration of reactors must follow.

*"The best herd of cows I have ever seen."*
*—John L. Smith.*

In THE HOLSTEIN-FRIESIAN WORLD, Syracuse, N. Y., issue of October 14, 1922, Mr. John L. Smith, nationally known judge of Holsteins, and who judged at Sacramento this year, writes as follows of his visit to Fred Hartsook's great herd at Lankershim, Calif.:

"We figured on a big day at Mr. Hartsook's so got a good start in the morning. Mr. Hartsook met us and we started in to see THE BEST HERD OF COWS I HAVE EVER SEEN. Production with type is his aim and he sure has it in his foundation."

This statement, coming from a prominent judge who has seen nearly all, if not all of the great herds of America and Canada, confirms the judgment of prominent California breeders and judges.

The wonderful quality of this herd is of particular interest at the present time to prospective buyers of registered Holsteins, for the reason that the herd has increased to the maximum size desired by the owner, and from now on regular draft sales will be in order. The first is to take place as follows:

# MEADHART BREEDING FARM

## Fred. Hartsook, Lankershim, Calif.

## First Draft Sale——60 Registered Holsteins

(Selling on the Farm)

## Friday, Nov. 10, at 10 A. M.

GREAT COWS with large yearly and short time records, many fresh or heavy springers.

SPLENDID HEIFERS, by high class sires and many out of high record dams, both long and short time.

PRACTICALLY EVERY FEMALE THAT SELLS BRED IN CALF TO SIR AAGGIE DE KOL MEAD, THE $30,000 SON OF MISS VALLEY MEAD DE KOL WALKER.

Prospective buyers who want production, type, good health, and the added value of cattle linked up with one of our greatest breeding herds, will find in this offering cattle worthy of their most careful consideration.

Every animal tuberculin tested and sold subject to retest by the buyer; every animal positively guaranteed to be a breeder.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who make arrangements before sale with California Breeders Sales and Pedigree Co.

# Absolute Dispersal

## Arthur & Maxfield Holstein Co. Herd

## 70 Registered Holsteins 70

## at Public Auction, Wednesday, November 15, 1922

### Kings County Fair Grounds, Hanford, California

To terminate the existing partnership between J. W. Arthur and Wm. G. Maxfield their splendid herd of registered Holsteins will be sold to the highest bidder at public auction.

This is an unusually attractive herd of cattle, among some of their accomplishments the following are noted:

HIGHEST PRODUCING purebred herd in Kings County Cow Testing Association, with an average of 439.23 lbs. butterfat from 13,595 lbs. milk on 21 head, in a ten months' test.

HIGHEST 7 DAY RECORD in Kings County, over 33 lbs. butter on official test.

HIGHEST 365 DAY SEMI-OFFICIAL RECORD in Kings County, with over 1,100 lbs. butter.

HIGHEST PRODUCING COW in Kings County Association, with 702.6 lbs. butterfat from 20,375 lbs. milk in ten months.

THIS ENTIRE HERD HAS PASSED TWO CONSECUTIVE TUBERCULIN TESTS WITHOUT A SINGLE REACTOR.

If you want high producing cows, or heifers and bulls from such cows, make your plans now to attend this sale. It is a choice herd of cattle in excellent physical condition.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who arrange for terms prior to sale with California Breeders Sales and Pedigree Co.

TRADE MARK SUPERIOR

# Which kind do you want?

harness that wears-out your horse

or

harness that out-wears your horse?

Harness is low-priced or high-priced according to the satisfaction and service it gives to the horse. The initial cost means little.

Superior Brand Harness is produced to meet the highest standard of quality. Every whit of leather used in our factory is carefully selected, inspected and re-inspected. We employ the most experienced harness makers—men who take an honest pride in helping build a worthy product.

Naturally it costs more to manufacture Superior Brand Harness than the ordinary kind, but our large volume of business enables us to keep the selling price down.

Superior Brand Harness, as its name implies, embodies a number of superior features that you should know about.

**WRITE FOR BOOKLET**
We have a limited supply of a booklet entitled, "Horse Profits," which gives interesting data and describes several popular styles of Superior Brand Harness. Ask for a copy.

**No. 150—Heavy Single Express Harness**
One of our most durable harnesses, thoroughly reinforced. Bridle No. 66, with box loop checks and sensible Express blinds; Lines 1⅛-inch with buckle and billets; Hames with dandy bolt, ball top; Traces heavy 3-ply solid through to hame; Saddle 5½-inch heavy leather skirt with Neat's leather pad and metal jockey plates; Breeching folded body, waved and raised layer, box loop hip strap tugs, adjustable hip straps, etc.

Fifty-two Reputable Dealers Throughout California Handle Superior Brand Harness

## FARM LAND FOR SALE

THE CHARLES WEEKS SYSTEM OF INTENSIVE POULTRY AND BERRY FARMS

ONE ACRE AND INDEPENDENCE

or

The fine art of earning a comfortable living on one acre in California.

For those who desire to dwell in sunny California without living up hard earned capital.

For 18 years proprietor of the most intensive Egg Farm in the world and Founder of the Famous Charles Weeks Poultry Colony at Palo Alto, California.

The Charles Weeks Poultry Colony No. 2 is now being established at Owensmouth, California, 26 miles from Los Angeels.
Write for literature.

Charles Weeks, 1124 Loew's Theater Bldg., Los Angeles, Calif.

**Alfalfa and Fruit Lands for Sale**—Would you be interested in owning a farm in the fine alluvial soil of San Joaquin County, in the heart of the dairy and fruit center, one-half mile from a fine grammar school, three miles from a big high school and three miles from railroad center connecting with all of the larger markets, where people are making fortunes in grapes and dairies. 800 acres of this fine land with lots of water is being subdivided into small farms putting on house, barn, tankhouse and irrigation plant ready for occupancy. You can be the lucky owner of one of these farms for a small payment down, six per cent on all deferred payments and contract to extend over a period of nine years. The owners will do more than the above improvements and help finance orchards, vineyards, alfalfa or purchase dairy cows. For further information address owner, F. F. Copp, 430 E. Mariposa St., Stockton, California.

ARE YOU GAME?
Some people have said the day of opportunity is past, but that is not so. We offer ambitious farmers an opportunity to own a farm on easy terms. Deep, rich, tried soil. Cheap irrigation, complete drainage. Rail and water transportation. Diversified crops.
SUTTER BASIN COMPANY,
304 California Fruit Building
Sacramento, California.

HOGS

**Tamworths, The Bacon Breed.** James J. Summerfield, Santa Rosa.

## PARADICHLOROBENZENE AND PEACH BORERS

A report from J. O. McKinney, county horticultural commissioner at Hollister, says:

"Growers of this county are now using paradichlorobenzene in the control of peach borers and find the expense for material to run from one and a third cents to two cents per tree according to the age of the orchards, and labor is about one and a half cents per tree for the average. Ground being very cloddy will cost more labor.

Experiments show that this treatment is effective when properly applied, and A. J. Flebut of the United States department of agriculture is aiding in demonstrating proper usages and is getting valuable information regarding different dosages and soil temperatures. More than five tons of this material will be used here this fall."

---

The Sun-Maid Raisin Growers announces appointment of Sanborn Hermanos, Inc. as distributing agents for Sun-Maid Raisin Growers for Mexico. The firm maintains headquarters in Mexico City. Announcement of this appointment was made shortly after the return from Mexico of Harry Davis, manager of the Latin-American department, who is now on his way to South America to investigate the possibilities for marketing Sun-Maid Raisins in the southern continent.

### Duroc Jersey

Boar 2 years—1, Great Orion S. Jr.; 2, Ace of Demrids 2nd; 3, Charnock Royal Path; 4, Ace of Pathfinder 2nd, Charnock Ranch, Hemet.

Boar senior yearling—1, Pathfinder Pride, Sierra Vista; 2, Top Notch Pathfinder, Charnock; 3, Sensation King Thorp.

Junior yearling boar—1, Charnock Pioneer Sensation, Charnock; 2, Diamond Bar Sensation; 3, Charnock Orion Cherry, Charnock; 4, Charnock Defender, Charnock.

Senior boar pig—1, Charnock Senior Leader, Charnock; 2, Charnock Mammoth Sox, Charnock; 3, S. V. Royal I Am, Sierra Vista; 4, Charnock Senior Mammoth, Charnock.

Junior boar pig—1, You'll Do's King, Thorp; 2, King You'll Do, Thorp; 3, No name, Charnock; 4, S. V. Royal 2nd; Sierra Vista.

Sow, 2 years—1, Lu Jack's Pathfinder Girl, Charnock; 2, Fancy Sensation Maid, Charnock; 3, Taylor's Defendress 2nd, Charnock; 4, Wonder Sensation Girl, Thorp.

Sow, Senior yearling—1, Diamond Senior Lady, Thorp; 2, Lena Sensation, Sierra Vista; 3, Charnock Betsy Sensation, Charnock; 4, Lucy Sensation, Sierra Vista.

Junior yearling sow—1, Cherry's Koke, Charnock; 2, Sunset Lady, Charnock; 3, Lucy Pathfinder 2nd, Sierra Vista; 4, Wonder Badage 3rd, Thorp.

Senior sow pig—1, Mammoth Lady, Sierra Vista; 2, Charnock Royal Defendress 5th, Charnock; 3, Charnock Royal Defendress 6th, Charnock; 4, 1 entry, Thorp.

Junior sow pig—1, Senior Miss of Mossdale, Thorp; 2, and 3, unnamed, Charnock; 4, Miss Sensation of Mossdale, Thorp.

Senior champ, boar—Pioneer Sensation, Charnock.

Junior champion boar——1, unnamed, Charnock.

Senior champ sow—1, D. Lady, Thorp; 2, Sunset Lady, Charnock.

Junior champ sow—Unnamed, Thorp.

Aged herd—1, Charnock; 2, Thorp; 3, Sierra Vista Stock Ranch.

Herd, boar and 3 sows under 1 year—1, Charnock; 2, Thorp; 3, Sierra Vista.

Herd—1, bred by exhibitor, Thorp; 2, Sierra Vista; 3, Charnock.

Get of sire, 4—1, Charnock; 2, Charnock; 3, Sierra Vista.

Produce of dam, 4—1, Charnock; 2, Thorp; 3, Sierra Vista.

One barrow of the breed farrowed before March 1, 1922—1, Charnock; 2, Sierra Vista.

Fat barrows, 1 barrow of the breed farrowed on or after March 1, 1922—1, Charnock; 2, Sierra Vista.

First pen of barrows, Sierra Vista.

Cassification spring pigs (sow)—1, unnamed, Thorp; 2 and 3, unnamed, Charnock; 4, unnamed, Thorp.

Classification spring pigs. Litter of four—1, Thorp; 2, Charnock; 3, Pickert & Son, Arlington.

Classification spring pigs—1, and 2, boar pig, Thorp; 3, Charnock; 4 and 5, J. M. Pickert & Sons.

### Poland Chinas

Exhibitors: Johnson Bros., San Diego; A. Buckland & Son, Fresno; Southern California P. C. Association; Thurman Irwin, Chino.

Boar, 2 year old—1, Renowned Liberator, Johnson Bros.; 2, Giant Prospect, Buckland.

Boar, junior yearling—1, The Tempest, Buckland; 2, Shark, So. Cal. P. C. Assn.

Boar, senior pig—1, Commander, Buckland; 2, Giant Challenger, Buckland; 3, San Diego Boy, Johnson Bros.

Boar pig—1, Jones Model, Buckland; 2, Model Boy, Johnson Bros.; 3, Model Jones, Buckland; 4, Glenwood Boy, Johnson Bros.

Sow, 2 year old—1, Model May, Johnson Bros.; 2, Miss Lady 5th, So. Cal. P. C. Assn.; 3, Evergreen Hatch, Buckland.

Sow, senior yearling—1, Timmie's Lady, Irwin; 2, Smooth Lady, So. Cal. P. C. Assn.

Sow, junior yearling—1, Miss King Kole, Buckland; 2, Buckland Girl, Buckland; 3, Graceful Lady, Buckland; 4, Perfection Maid, So. Cal. P. C. Assn.

Sow, senior pig—1, Show Girl, Buckland; 2, Miss Model Wonder, Buckland; 3, Prospect Maid, Buckland.

Sow, junior pig—1, Maid's Model, Buckland; 2, Pacific Girl 2d, Buckland; 3, Maid's Model 1st, Buckland; 4, unnamed, Johnson Bros.

Senior champion boar—1, Tempest, Buckland; 2, Liberator, Johnson Bros.

Junior champion boar—Commander, Buckland.

Senior champion sow—Miss King Kole, Buckland.

Junior champion sow—Maid's Mossdale, Buckland.

Reserve champion boar—Renowned Liberator, Johnson Bros.

Senior reserve champion sow—Model Mary, Johnson Bros.

Junior reserve champion boar—Jones Model, Buckland.

Junior reserve champion sow—Show Girl, Buckland.

Grand champion boar—Tempest, Buckland.

Reserve grand champion boar—Jones Model, Buckland.

Grand champion, sow—Miss King Kole, Buckland.

Reserve grand champion, sow—Maid's Model, Buckland.

Herd, boar and 3 sows—1, Buckland; 2, Johnson Bros.; 3, Buckland.

Herd, boar and 3 sows—1, Buckland; 2, Buckland; 3, Johnson Bros.

Herd, boar and 3 sows under 1 year, bred by exhibitor—1, Buckland; 2, Johnson Bros.; 3, Mays.

Get of sire—1, Buckland; 2, Buckland; 3, Johnson Bros.

Produce of dam—1, Buckland; 2, Buckland; 3, Johnson Bros.

Fat barrow, 1 of the breed, farrowed on or after March 1, 1922—1, Buckland; 2, Buckland, 3, same.

Fat barrows, 3 of the breed, farrowed on or after March 1, 1922—1, Buckland; 2, Anderson.

Promotion show—1, Johnson Bros.; 2, Mays; 3, Anderson; 4, Canham; 5, Babcock.

Women's fitting and showing contest—1, My Lady Rival, Mrs. F. L. Hall; 2, Lady 1st, Mrs. Will Mays.

Grand champion barrow all breeds—Berkshire, Johns.

Grand champion pen barrows all breeds—Tamworths.

### Berkshires

Exhibitors: A. B. Humphrey, Escalon; Chester T. Johns, Ontario; F. L. Hall, Perris; Italian Vineyard Co., Guasti; Mrs. F. K. Hall, Perris.

Boar, 2 year old—1, Escalon Big Joe, Humphrey; 2, Enhancer, It. Vin.; 3, Master Type, Johns.

Boar, senior yearling—1, Escalon Artful Leader 5th, Humphrey; 2, Riverby, Rival 2d, Johns; 3, Laurel Achievement, Hall; 4, Iowana Artful King 33rd, It. Vin.

Boar, junior yearling—1, Guasti's Rival, It. Vin.; 2, Hazen's Rival, It. Vin.; 3, Etiwanda Duke, It. Vin.

Boar, senior pig—1, G. W. Ambition, Humphrey; 2, Kintyre Dominator, Humphrey; 3, G. M. Royal 3rd, Humphrey.

Boar, junior pig—1, Monark Royal Superb, It. Vin.; 2, Enhancer Leader, It. Vin.; 2, Grays Wild Rose 6th, It. Vin.; 3, rey; 4, G. W. Leader 15th, Humphrey.

Sow, 2 year old—1, Violet Festline, It. Vin.; 2, Grays Wild Rose 6th, It. Vin.; 3, Real Type's Lassie, Johns; 4, G. W. Rose 2d, Humphrey.

Sow, senior yearling—1, G. W. Laurel 2d, Humphrey; 2, Festline's Rival 3rd, It. Vin.; 3, G. W. Bernice 13th, Humphrey; 4, Lady Goods Rookwood, It. Vin.

Sow, junior yearling—1, Escalon Artful Princess, Humphrey; 2, Guasti's Lady Rookwood, It. Vin.; 3, Violet's Lassie 2d, It. Vin.; 4, Violet's Lassie, It. Vin.

Sow, senior pig—1, 1 entry, Rincon's Wondrous, It. Vin.; 2, G. W. Rose 36th, Humphrey; 3, Escalon Royal Lady 13th, Humphrey; 4, My Lady Rival, Hall.

Sow, junior pig—1, Rival's Bell, Johns; 2, Guasti Royal Lady 2d, It. Vin.; 3, Escalon Belle 28th, Humphrey; 4, G. W. Lad 3rd, Humphrey.

Grand champion boar—Escalon Big Joe, Humphrey.

Reserve grand champion boar—Guasti's Rival, It. Vin.

Junior champion boar—Monarch Royal Superb, It. Vin.

Reserve champion—G. W. Ambition, Humphrey.

Senior champion sow—Violet's Festline, It. Vin.

Junior champion sow—Rincon's Wondrous, It. Vin.

Senior reserve champion boar—1, Guasti's Rival, It. Vin.

Senior reserve champion sow—1, Grape Wild Laurel 2d, Humphrey.

Junior reserve champion boar—1, G. W. Ambition, Humphrey.

Junior reserve champion sow—1, Rival's Lass, Johns.

Boar and 3 sows over 1 year—1, aged herd, It. Vin.; 2, 1 entry, Humphrey; 3, 1 entry, Johns.

Boar and 3 sows under 1 year—1, two herds under 1 year, It. Vin.; 2, 1 entry, Humphrey; 3, 1 entry, Johns.

Boar and 3 sows over 1 year bred by exhibitor—1, 1 entry, Humphrey; 2, 1 herd bred by exhibitor, It. Vin.

Boar and 3 sows under 1 year bred by exhibitor—1, 1 entry, Humphrey.

Get of sire—1, 1 entry, Humphrey; 2, two get of sires, It. Vin.; 3, 1 entry, Johns, 4, two get of sires, It. Vin.

Produce of dam—1, 1 entry, Johns; 2, 2 entries, It. Vin.; 3, 2 entries, It. Vin.; 4, 1 entry, Humphrey.

Barrows, 1 of breed, farrowed after September 1, 1921 and before March 1, 1922—1, It. Vin.; 2, It. Vin.; 3, Johns.

Fat barrows 1 of breed, farrowed on or after March 1, 1922—1, 1 entry, Johns; 2, 2 single barrows under 6 months, It. Vin.; 3, 2 single barrows under 6 months, It. Vin.

Fat barrows, farrowed after September 1, 1921 and before March 1, 1922—1, 1 pen of barrows under 1 year, It. Vin.; 2, 1 entry, Johns.

Fat barrows, 3 of breed, farrowed on or after March 1, 1922—1, 1 pen of barrows under 6 months, It. Vin.

American Assn. special boar—1, Rosecrest achievement, Hall; 2 and 3, 2 entries, Humphrey; 4, Bernice's Laurel King, Johns; 5, 1 entry, Jones, 6, 1 entry, Beard.

American Berkshire Assn. special sow—1 and 3, 2 entries futurity, It. Vin.; 2, 1 entry, Humphrey; 4, King's Bernice 2d, Johns; 5, 1 entry, Humphrey; 6, King's Bernice, Johns.

American Berkshire Assn. special litter—1, 1 entry, futurity, It. Vin.; 2, 1 entry, Humphrey; 3, 1 entry, Johns; 4, 1 entry, Hall; 5, 1 entry, Jones; 6, 1 entry, Beard. tario.

Southern Berkshire Congress Ladie's special—1, My Lady Rival, Mrs. L. Hall; 2, Rincon Duchess, Mrs. Alex M. Wilson; 3, Etiwanda Duchess Dillard; 4, Etiwanda Lady Climax, Dillard.

Barrow carcass, senior—1, Berkshire, Humphrey; 2, Hampshire, Underhill; 3, Tamworth, Summerfield; 4, Poland China, Garner.

Barrow carcass, junior—1, Poland China, Mays; 2, Duroc, Sierra Vista; 3, Hampshire, Underhill.

Champion carcass—1, Will Mays, Poland China winner over all breeds and both ages.

## NIGHT CLASS IN FRUIT GROWING

Beginning November 7, night classes in fruit growing will be held at Chaffey Union High School on each Tuesday evening for six weeks. Varieties, pruning, thinning and fertilization are the principal topics to be discussed. On the evening of November 7 a pruning conference will be held and it is hoped that a number of growers will be present to narrate their past season's experience in pruning.

"Stronger Chicks"

Give your chicks a fair chance—give them a good incubator in which to start.

**Stop Hatching Weak Chicks with Cheap Incubators**

It's no mere "claim" that the right incubator does produce better chicks. One of our Iowa dealers writes: "We can get hundreds of testimonials of Stronger Chicks and almost Perfect Hatches with the Queen."

A good incubator is the start to profitable poultry production—it's the cheapest thing you can buy.

Remember, it is not how many you **hatch** that counts, but how many you **raise.**

The Queen is known all over America as a high-grade moderate-priced incubator that delivers high-precentage hatches of chicks that live and grow. Sizes, 70 to 1000 egg.

You ought to have a Queen Incubator and Brooder. Ask for our Free Book describing our full line.

# Fall Hatching

By B. R. Holloway

IN one of your recent issues this question was asked by a subscriber from Arcadia: "I am new in the poultry game and would like to know whether a fall hatch of White Leghorns will do as well as a spring hatch. What are the objections, if any, and why do not more poultry people prefer the fall hatch?" You answer that the pullets are not profitable because they begin laying at the decline of the season instead of at its height and must be fed longer before they pay for their feed. In my experience of over ten years hatching almost a million fall hatched chicks, would state that the fall hatch is the best investment a poultryman can make as the pullets may be raised 50 cents cheaper each than spring hatched pullets. First, because they grow faster and one can raise a very large percentage, in many cases one pullet to two chicks or better. You get a high price for broilers, and pullets come along in about five months on a chick growing mash, laying in many cases 75 per cent at 6 months of age, and you cannot stop them.

You no doubt realize that practically all money that is made on poultry ranches is made in the spring of year when they get large quantities of eggs. Pullets hatched in September will be laying in January and getting up to good percentage in February and will lay very profitably until away along in October, when our experience shows us that they may get down to 20 to 25 per cent when we put the lights on them and they will come back much more quickly than the early hens.

We have found after carrying fall hatched chicks on our own place for many years, that their first moult is very light and much later than spring hatched, and the second year we find they moult much later and produce a very high percentage of eggs in the fall. This is easy to understand from the fact that our breeding hens are the late moulters and with the best hens in the flocks we have mated fall hatched cockerels which come from mothers who have been late moulters. We have delivered in the first three weeks of our delivery, that is, on August 24, 31 and September 7, 58,000 chicks and have in our incubators at this time, 100,000 eggs. The demand is excellent. This will means that we will sell approximately 40 per cent more chicks this fall than the fall season of 1921.

Fall chicks are profitable all the way through from the fact that one is enabled to use the brooder system to the best advantage, having more time between broods, which means being able to give better attention to each brood and cleansing the soil thoroughly and also raising chicks when the vitality is extremely high.

Also you say: "If one is short of pullets and anxious to save time, he should set all the eggs he can in August and bring off September chicks. If he has birds enough for the coming season he will do better to wait till February, which is, all things considered, the best hatching month in the year." I feel that this statement is not correct for the simple reason that we have hundreds of customers who buy chicks from us during the latter part of August, September, October and on into November when they are of good vitality and we find that the poultryman who merely sits around waiting for the most propitious time to brood one lot of chicks is usually the one who does not succeed very well.

As to producing eggs for fall hatched chicks, this is too large a subject for me to go into at this time. The hatching percentage is low, but only because we get a larger percentage of clear eggs in the fall than in the spring and a much greater percentage of dead germs and the dead germ condition is caused, no doubt, by eggs being picked up in very warm weather, although they are gathered often. However, the eggs that are left, from a hatching standpoint, hatch as well as they do in the spring, and we get as fine or finer chicks than we do in the spring. We have delivered to date (September 22) in the past five weeks, approximately 88,000 chicks and we have reports of their great vitality and everyone is well pleased.

We have found this condition prevailing every fall for the last seven years, chicks being especially fine and strong, so the impression of low vitality in chicks in the fall is absolutely incorrect, although the low hatchability impression is correct. All of our customers raise an exceptionally high percentage of fine pullets which are uniform in size, cockerels come to a broiler weight quickly and sell for higher prices.

These statements are made in reference to Southern California only and at some other time I would be glad to go into the matter of producing good hatching eggs in the fall of the year. However, at this time we are extremely busy and rushed as we are building a large addition to our hatchery and our business is 40 per cent greater than last fall, which means that we are very busy.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Lice and Other Things

We have just bought a mixed lot of chickens and turkeys and find them very lousy. A small lump just above beak of one tom has been treated by dousing head in kerosene. Another tom has stood around hunched up for a week. We powdered him thoroughly with sodium flouride. The pullets are six months old. Should they have a laying mash? We have no green feed and are feeding alfalfa hay instead. Our grain is barley and wheat hay with the grain in the heads. Is the barley good feed? This is our first venture in California and we shall be grateful for any suggestions.—Subscriber, Palmdale.

To get rid of lice, dust the chickens with sodium flouride, or anoint with blue ointment, wihch must be handled carefully, since it is poisonous. You can buy it at any drug store, I think. Dilute half and half with vaseline, and apply a bit the size of a pea with the tip of the finger around the vent of each bird. Do not use anywhere but about the vent. For the turkeys buhach powder is best. Dust thoroughly on a sheet, then cover for a moment with another sheet or a sack, and you will see the lice fall off by hundreds. That lump above the beak of one tom may be the beginning of chicken-pox. Better anoint with carbolated vaseline and keep him away from other birds. The "humped-up" tom may have blackhead and may be only lousy. If the sodium flouride treatment does not improve his condition, try two tablespoons olive oil. Give this in the morning, and next morning, if he does not eat, mix into a cup of clabbered milk one-third teaspoon each of red pepper and charcoal and a little chopped onion, and thicken with dry toast or corn bread. Mold a teaspoon of this into a pill and feed forcibly three or four times a day. This recipe was given me recently by a woman who had had excellent success with it, and is worth a trial. The hens and pullets should have a good laying mash before them all day. also grit, shell and clean water. In addition to the mixed grain in the head, give some cracked corn at night. The young stock should also have cracked corn, but not the turkeys, that is, not until fattening time. They are not quite old enough yet. Barley is pretty generally used by California poultrymen, and the hulls do not often make trouble. If they do, feed less and more of the wheat and corn. The green feed question is a serious one, for hens will not lay and thrive for long without greens. Alfalfa hay is a better substitute than alfalfa meal, and you might try sprouting barley or oats till you have something else. For a winter supply of greens the easiest thing is to plant barley now. If it rains it will grow rapidly, and as soon as it is tall enough to cut you can cut a little each day and run through the clover cutter. Many poultrymen depend on barley for their winter greens. For next summer plant a patch of alfalfa some time this fall. You can mix barley with it for a "nurse crop" then pull out the barley after the alfalfa is well started.

### Feather Eating

What makes chickens eat feathers, and what is the cure?—Subscriber.

Feather eating is a vice. Sometimes it is due to lack of meat in the ration, but more often it is induced by idleness or by vermin. See first that the birds are free from lice and that there are no mites in their house. Give more meat, either in the form of green cut bone or in a well cooked mash, with vegetables, green peppers and a little linseed meal. Give free range if possible. An ointment consisting of a teaspoon of extract of aloes mixed in a cup of lard rubbed on the feathers around where the feathers have been picked out, will soon put an end to the trouble.

### Beans

Are blackeye beans good for laying hens and should they be fed during the molt?—Subscriber.

Blackeye beans are good feed at any time, but should not be more than a third of the hard grain ration. They can also be ground and fed in the dry mash.

### Best Breed

What is the best breed of chickens, or is there any difference in the smaller breeds?—Subscriber.

There is no best breed. White Leghorns are preferred for commercial egg farms because they are believed to stand confinement in large flocks better than other breeds and to produce more eggs on a given amount of feed than any other. For backyard use you will probably find any other of the Mediterranean breeds just as good layers, and if you want meat as well as eggs you will get both from any of the American breeds, Rocks, Wyandottes and R. I. Reds. The Asiatics do not lay so early nor so many eggs, but are splendid for the table.

### Rhode Island Whites

In reply to an inquiry published in the Cultivator a few weeks ago I wish to say that I have both R. I. Reds and R. I. Whites. I have raised the Reds for 13 years and this is my third season with the Whites. I have studied both breeds carefully and have decided the Whites are ahead. I think they mature earlier, respond with extra eggs to extra feeding more quickly than do the Reds, and they are much nicer to dress, but they are not as quiet and easy to handle as the Reds. I think they show the Leghorn cross there. I have the idea from the way the article read that the writer who answered did not know much about the Whites. They are a distinct breed from the Reds yet like them in size and build. The breed originated in Rhode Island.—Mrs. Wm. P. Smith, Lindsay.

I am very glad to be corrected, for my own acquaintance with Rhode Island Whites is entirely a show room acquaintance.

### Poor Hatching

Rhode Island Red and White Leghorn eggs in my hot water incubator did not hatch well, but all behaved alike. In some the chicks were just beginning to form; in others nearly formed; in others entirely formed, and a small percentage hatched. The machine held its temperature well and chicks commenced hatching on the 20th day. What was wrong?—Subscriber, Fresno.

You will never get a good hatch with eggs from heavy hens and White Leghorns in the same incubator, but there must have been something wrong beside the mixing of eggs. Is it possible some of the eggs were held too long before they were set? Nine days is the limit with expert hatchers. From the fact that many of the chicks were not fully formed I am inclined to think the temperature was kept too low. Did you test your thermometer beforehand? If it registered a degree too high that would account for the poor hatch.

### Crooked Neck

My large tom turkey has developed a crooked neck. He faces straight ahead but his neck is twisted till it looks like a crooked-neck squash. He eats fairly well but is getting thin and lacks pep.—Subscriber, Holtville.

That condition is called "wry-neck" and is believed to be due to brain or nerve irritation. It is sometimes connected with rheumatism, and may possibly be caused by worms or by other irritation of the digestive tract. I believe I would try oil of turpentine in a dose of two to three teaspoons. See that he gets no spoiled or moldy feed.

### Cause of Worms

Does sprouted barley or oats given to chickens cause worms?—Subscriber, Burbank.

I do not see how it could. Worms usually come from infected or filthy soil. When chickens have been infested with these parasites for a long time the soil gradually is filled with them or with their eggs, and it is difficult to rid the hens of them without removal to new soil.

# Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

### Infection

I have a mare that, according to the veterinarian here, had infection in her ankle joint which swelled badly and the swelling extended up the leg and pus sacs formed which I opened. Soaked the foot and ankle in hot water and sheep dip. She came out all right and four months later the hock on the same leg swelled up badly. I have opened it several times and washed it out with sheep dip but it gets no better. What shall I do with it?—Subscriber, Bakersfield.

You should be very careful in opening a swelling that is near a joint. You might open the joint and let out the joint oil. Try putting on a flaxseed poultice over night, then wash it off with warm water and use a solution of the permanganate of potash. Use a teaspoon of it to the quart of water.

### Sweeny

I have a four year old colt that has a sweenied shoulder. Have used four bottles of liniment and while it has helped some it has not cured it. What would you advise doing?—Subscriber, Bakersfield.

The best remedy we know of for curing sweeny is to inject a few drops of equal parts of alcohol and turpentine into the muscle in several places. This must be done with a hypodermic syringe and done carefully. You should get a veterinarian to do it. It may be necessary to repeat the operation in about three weeks but one treatment is usually sufficient.

### An Unusual Case

What is wrong with my cow? She stretches her neck and backs to the end of her chain and quivers as though too weak to stand up. She eats hay, bran and beet pulp but refuses to eat any green feed. She had trouble calving. Had her bred a short time before she started to have these spells. What is the cause of her troubles?—Subscriber, San Diego.

The symptoms are not common and we do not know what to name it. Would advise trying one pint raw linseed oil and two ounces of turpentine as a drench every day until four or five doses have been given. Tell us of any new developments.

### Swollen Udder

We have a cow with a swollen udder. We have given her epsom salts and rubbed hot oil on the swollen parts but she is no better. Can you tell me what to do for her?—Subscriber, Mountain Ranch.

Why did you apply hot oil? The oil will close the pores of the skin and make conditions worse. Warm water would be better but just careful rubbing is sufficient. She may have tuberculosis. That will often cause swelling of the udder that will not yield to treatment. Better have her tested.

### Tuberculosis

I have a fine grade Holstein cow that has her fourth calf. She has looked very poor since calving but we attributed it to her being a heavy milker. She was tested the other day and proved to be very bad with tuberculosis. What effect will this have on her five months old calf that has had her milk right along. The heifer is a beautiful large calf that is worth saving if possible.—Subscriber, Moorpark.

We would not advise trying to raise the calf. She is probably not affected much yet and would be safe to fatten for the butcher but would not be safe to raise for a milker.

### Rheumatism

We have a mare that became lame suddenly, over night, in one hind foot. Was so bad she could not touch it to the ground. We bathed it and applied liniment now for three weeks and she is no better. The other hind foot is now in same condition. She lies down most of the time and has great difficulty in getting up. Both legs are swollen from hock to foot. She drinks a great deal of water and eats only rolled barley, will not touch hay. Can it be rheumatism and if so what would be the best treatment?—Subscriber, San Marcos.

When there is pain and swelling and we can not find any other name for it we call it rheumatism. Now if this is rheumatism a good remedy would be three ounces of salicylate of soda, four ounces of bicarbonate of soda and six ounces of powdered gentian. Mix and divide into 24 powders and give one powder morning and evening in the feed. She should eat some hay. Cut down the grain so she will want the hay.

### Warts

What can I do to take warts off a cow's teats and also off the neck?—Subscriber, Denair.

If the warts have a small neck clip them off with a scissors and touch the spot with the end of a red hot wire. If the warts are flat apply a little nitric acid which will kill the wart and in a few days will form a scab and drop off. If you do not put on enough the first time you may have to repeat it. Be careful in handling the acid. It is very caustic and will burn your hands or clothing. Use a small swab to apply it.

### Cow Failing in Her Milk

I have a four year old Jersey cow that came fresh on Decoration Day (May 30). She gave about five gallons of milk but now has dropped off to less than half that amount. She seems well. We feed a prepared meal. Can the difference be that earlier in the season we could get plenty of green corn stocks or green barley? Otherwise she is treated the same. She was dried up six weeks before calving thinking it would benefit her when she came fresh.—Subscriber, Arcadia.

Green feed is always best to keep up the flow of milk. The next best thing is sloppy feed. That seems to agree with a cow. A little salt should be given regularly. Alfalfa for milk cows should be cut before it is too ripe and should not be dried too much. Alfalfa that is tough and stringy makes a better cud and the cow remasticates it better, digests it better and gives more milk after it.

### Triplets

I have a cow that has just dropped three calves, one heifer and two bulls. The cow is six years old and this makes seven calves for her. Calves all normal and doing well though they came a little early. Will they breed? Will the cow calve again?—Subscriber, Lemon Grove.

When there are twins, one a heifer and the other a bull, the heifer is nearly always barren and is called a freemartin. Now where there are two bull calves to one heifer the chances for her being barren are even greater. The bulls will probably be all right. We do not see any reason why the cow would not continue to breed.

### Cow Bloats and Dies

About two weeks ago we had a young Jersey cow that was due to come fresh in December. She had been fed dry alfalfa hay and a few cull potatoes. She got loose and was in a field that had been in spring potatoes, for about 20 minutes, when we caught her. She started to bloat and in ten minutes was dead. Some thought she had been poisoned. All she could have eaten was a little alfalfa and some young tumble weed. Do you think she was poisoned or what do you think could have killed a healthy cow so quickly?—Subscriber, Chatsworth.

We do not know of any poison that would cause her to bloat so quickly. We are inclined to think that she picked up a potato that had been left in the field and it was too large to pass down into the stomach. It stopped in the throat or between there and the stomach. In that case just what you saw would follow. The remedy would be to push the potato down into the stomach or puncture the side and let the gas out until relief could be given some other way.

### Hen With Fatty Tumor

I had a fine large Barred Rock hen, two years old, that had a lump on her left hip. The lump was one year in growing. I showed her to many including a veterinarian, but no one ever saw anything like it. She ate and drank and ran as fast as the others and did not seem to suffer in any way. At last, filled with curiosity, I killed her and found the lump to be a solid mass of fat just like kidney suet. It was pear shaped and weighed one and one-fourth pounds. The fat would separate in layers. The hen weighed four pounds and was nice and fat both inside and out. Do you think it would

### LIVESTOCK

(Quotations furnished by Federal-State Livestock Market News Service, 1014 Pacific Finance Building, based on prices off cars at Los Angeles.)

Cattle: Cattle market quiet. Packers forced to buy from Montana, Utah, Arizona and Texas to take care of their needs up to November 1. Few fat California cattle found narrow outlet though prices held steady. Good, weighty steers continue to move from 7.75@8.00, laid down here, with 800 to 1000 pound offerings of good quality around 7.50. Small lots good steers sold California points at 6.50@7.00. A string of 120 good two year old Herefords of Arizona origin sold in Kern County at 6.75, weighing 810 pounds after 11 mile drive. Common Arizona steers low as 6.00@6.50 off cars. Good hay-fed above 1100 pounds 7.00 at loading station Kern County. 5.00@5.25 took several small lots fat, heavy cows country points, similar stock cost to 6.00 off cars here. Seventy good two year old Hereford heifers, averaging 825 pounds, brought 5.25 loading point, Kern County. Drove good 1071 pound cows in Kern brought 5.00, common to medium 1062 pound, 4.00. Some demand for bologna and butcher bulls 3.00@4.00.

Feeder market quiet, few thin steers available. California purchasers took on Utah and Idaho feeders at 5.75 and west Texas Herefords at 5.50, Arizona yearlings and twos at 5.00 and threes and fours at 5.25. These are moving into the Imperial as well as coast counties.

Calves: Hot weather and over-supply dulled demand. Good and choice light dairy vealers, 7.50@7.75 off cars here, with 225 to 250 pound offerings at 7.00@7.50, 300 pound averages from Texas and Arizona 6.50@6.75, common to 5.50.

Hogs: Shortage stock cars cut down hogs from the East and California porkers found active demand. Good, grain-fed 160 to 200 pound, 11.00@11.25 L. A. plants, heavier weights and sows usual discounts. Spread 9.80@10.00 took most choice light hogs at farm bureau sales last week.

Sheep and Lambs: Choice fat lambs, off cars, 13.25@13.50. Utah lambs, 12.00 and better shipping points, choice light yearling wethers to 8.00, fat, handyweight ewes, 4.75@5.00.

Demand for feeding lambs fairly good, prices slightly under fat stock. Desirable breeding ewes, 9.00@10.00, f. o. b. ranch. Quotations released from this office on and after November 1 will be based largely on actual sales at the Union Stock Yards.—Nelson R. Crow.

### POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, October 24 by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

Potatoes: Demand and movement moderate, market steady. New Stock: Locals, best, sacked 1.35@1.65; mostly, 1.50@1.65; poorer, low as 1.00 cwt. Northerns: Rivers, 1.80@1.90; poorer low as 1.65 cwt. Idahos: Russets, 2.00@2.15. Sweet Potatoes: Locals: Nancy Halls, 2@3 lb. Northerns; Nancy Halls, 3 lb.

Onions: Demand and movement slow, market steady. Stocktons: Yellow and White, 2.00@2.25 per cwt. Locals: Whites, 60@75; Spanish, 75@90 lug. Garlic: Mex. and Northern, best, 6; poorer, 5.

### VEGETABLES

These are the actual prices obtained between 7 and 8 o'clock, October 24, by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Artichokes: Doz., 1.25@1.50; small, 1.00.

Beans: San Pedro: Kentucky Wonders, 7; Limas, 6@7.

Bunched Vegetables: Per dozen bunches: Trunips, carrots, beets parsnips, 30. Parsley, onions and radishes, 15; spinach, 25.

Cabbage: Market dull, quality generally good. Field cr., best mostly 3.00@3.25.

Cauliflower: Per doz., 1.25; large sizes, 1.50@1.75.

Cucumbers: Local, lug, 1.50@1.65.

Celery: Movement moderate, market dull. Wide range in quality and prices. Locals, Northern, best, 2.25@2.50; poorer, 2.00.

Corn: Green, local, best, lug, 80@90.

Eggplant: Local, 2½ lb.

Lettuce: Market steady Locals: Ordinary, leafy, 75@90 cr.; Northern, 2.50@3.00.

Okra: Lb., best, small, 11@12.

Peas: Best, Northern, lb., few best, 12@13; poorer, 8@9.

Peppers: Locals: Bells, mostly, 3½; Chilis, 3@3½ lb.; Cherry and Floral Gem, 10; Pimentos, 5.

Sacked Vegetables: Per sack. Beets and Carrots, 1.00; Turnips, 1.25.

Squash: Market steady. Locals: Summer, lugs, 50@65; Italian, lugs, 90@1.00; cream, 75 lug; Hubbard, 2 lb.

Tomatoes: Demand moderate, movement slow, market dull. San Pedro: Lugs, best, 1.00; poorer low as 60@75.

### FRESH FRUIT

These are actual prices obtained October 24 by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc., as compiled by the U. S. Bureau of Markets. Terms, cash on the walk.

Apples: Demand and movement moderate, market steady. Northerns: Bellefleurs fancy, 3½ tier, 1.25@1.35; 4 tier, 1.30@1.50; loose 2½@3 lb. Locals: Loose, Romes, 3; Jonathans, 3½; Delicious, 5@6 lb. Utahs: Jonathans, loose, 3½ lb.; bushel baskets, 1.75. Washingtons: Jonathans packed, extra fancy, 2.25; fancy, 2.00 per box. Oregons: Delicious, loose, fancy, 7@8.

Cranberries: Cape Cods, 14.00@15.00 per barrel; half barrel crates, 7.00@7.75.

Grapes: Demand good, market unsettled. Northerns and Locals: Muscats, best, 5; poorer, 3@4; Malagas, 4@4½; Tokays, 6½@7½; Cornichons, 5½@6; Black Morocco, Missions and Zinfandels, 4@5 lb.; Red Emperors, 6½ lb.

Peaches: Market steady. Locals and Northerns, best, 4@4½; poorer, 2@3.

rieties, best 4; poorer, 2@3 lb.

Pears: Demand good, market firm. Northerns and Locals: Bartletts, best, 6½; ripe, 3@5.

Persimmons: Lb., 8@10.

Pomegranates: Lb., 6@7.

Watermelons: Demand moderate, market dull. Locals: Klondikes, medium size, 75@1.00; No. Black Diamond, large 1.25@1.50; casabas, Northern and local, 1.25@1.50 cwt.

### CITRUS FRUIT

Grapefruit: Arizonas, 65-96 sizes, 6@6.50.

Lemons: Demand and movement light, market steady. Special brands, fancy, 8@9; choice, 6.50@7.50.

Oranges: Demand moderate, market steady. Valencias, special brands, $10@11 according to size.

### HONEY

Colonies generally in good condition for winter. Nectar yield from alfalfa reported unusually light. Demand and movement of honey barely moderate with relatively few inquiries for carlots. Market firm and many beekeepers and shippers reported holding for higher prices, expecting a general advance due to the tariff. Carlots for outside shipment ranged per pound as follows: White Orange 10@10½ cents; one car sold locally at 9 cents. White Sage, 8¼@8¾; one car 9¼ cents. Light Amber Sage, 6½@7 cents; Light Amber Alfalfa, 6¼@6½ cents. Beeswax: Cash to growers 20 cents per pound.

### WALNUTS

Prices named by the California Walnut Growers Association on last Tuesday are: No. 1, 22½; No. 2, 17½, and fancy budded, 26. Last year's closing price for No. 1 was 27. The market opened at 24½, but only stood at that point for a day, strengthening immediately and moving up to 27.

### BEANS

California Lima Bean Growers Association, October 21:

Managers of warehouses report total quantity (field run) regular Limas for 1922 crop: Santa Barbara County, 70,000 bags; Ventura County, 674,500; Los Angeles, County 60,000; Orange County, 276,700; San Diego County, 20,000. Total 1,101,200. Total production regular Limas about equal to 1921 crop plus holdover of 1920 on hand September 1921. The market has advanced and seems firm today at around 7.65@7.75 f. o. b. cars on C/R grade regular Limas and 9.00 on C/R Baby Limas. Market promises to hold firm on above basis and may show advance. Michigan white beans have advanced past few days, now selling 7.00 f. o. b. cars Michigan.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Prices quoted f. o. b. L. A. to producers:

| | |
|---|---|
| Tame Oat | 20.00@22.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 8.00@10.00 |
| Barley Straw | 7.00@ 9.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around $22 as a fair average. No. 1 dairy is varying from $15 to $17 with $16 as a mean or average price. Standard alfalfa is not much in evidence. Few offer it; fewer want to buy. If sold it brings from $10 up.

### HONEY

White Hawaiian honey offered at 7 per lb. f. o. b. San Francisco. Few sales No. 1 Star Thistle honey reported from Northern California at 8 per lb.

### BEANS

California Bean Growers Association selling prices, 100 pounds, for choice recleaned California beans (1922 crop) in carloads, f. o. b. California common shipping points on October 21, 1922:

| | |
|---|---|
| Large Whites | 6.25 |
| Small Whites | 6.00 |
| Pinks | 6.80 |
| Mexican Reds | 5.60 |
| Red Kidney | 6.60 |
| Bayos | 7.00 |
| Henderson Bush Limas | 9.50 |
| Cranberry | 7.15 |
| Blackeye | 5.00 |

### HAY AND FEEDSTUFF

Under date of October 21, A. W. Scott Co. says:

Receipts 444 as compared with 961 previous week. Light receipts caused by car shortage and embargo on shipments in various sections of the country and reduced receipts have strengthened prices so that the average values are a litttle higher than a week ago. Export and coast shipments continue steady but light. Inquiries active. Interior and country trade quiet. Alfalfa has not been doing as well this week. Difficulties of transportation and very light demand from consumers have prevented trading and while there has been no change noticeable in price, market has dragged.

| | |
|---|---|
| Barley, Ground | 34.00@36.00 |

## Snappy Notes on Livestock

By A. L. Spellmeyer

Steers still average fat here 7.50, good heavy cows 5.50, veal calves 7.'0, hogs 10.50 and lambs 13.00. Demand is for heavy steers and some heavy cows. Calves and common cows oversupplied. Hogs and sheep in strong demand.

Feeder trade f. o. b. country has slackened, and thousands of yearling steers are now waiting sale at 5 cents in Arizona, together with a considerable offering of twos up steers at 5 to 5.25 and thousands of stocker cows at 3 cents and light grass fat cows at 4. These offerings will close in 30 more days if the high range country of Arizona has snows, and California demand that rain will surely bring will then have difficulty in filling.

Colorado is offering heavy fat cows at 4.10 to 4.40 and that means 5.60 to 5.90 Los Angeles. Utah cows 1100 pounds coming in are costing 5.50 to 5.75. One string of cows sold at 6 cents to a packer but the speculator paid 5.50 and they weighed 1200 pounds average.

California buyers are urged generally by the livestock men here to attend the opening of the stockyards and secure lots of feeder and stock cattle to suit their requirements. Good lambs and hogs and heavy steers will find ready sale at fair prices, it is claimed, when stockyards open, but there is a surplus of yearlings and cows that the country should absorb during this period when ranges are making final shipments for this fall. A California buyer who has feed now or prospective can fill needs for one car or a hundred now from Arizona and New Mexico, either through stockyards or through order buying. The man who doesn't buy these cheap cattle will be sorry, for it's surely going to be a wet year and a good one here in California with a beef demand far greater than supply in sight for heavy fat cattle. Los Angeles alone between November 1 and July 1 will use over 200,000 fat cattle.

The commission exchange for the Los Angeles Union stockyards has been formed and comprises about 20 firms. Among this number are five men who have been local managers for various packing houses, and some six others are also favorably known in previous yards in commission circles. The exchange contemplates upon completion strict rules to govern ethics of trading. At the organization meeting Friday there was a general desire to join with other livestock exchanges in having the department of agriculture set commission rates.

It was considered impossible to adopt lower rates than those prevalent in competing markets and secure a reasonable cooperation. The American National Livestock Association is now suing for a return to pre-war rates and I am told the department of agriculture will probably set rates in the near future, but the new exchange made it clear it was a general desire to conform to government rulings.

### VETERINARY

(Continued from Page 461)

have broken in time or would it be more likely to have killed her?—Subscriber, San Marcos.

It was a fatty tumor, just fat gathering in an uncommon place. Seen occasionally in animals or birds. It is not a disease. Why the fat accumulates in uncommon places we can not understand. If you had just split the skin and peeled it out and stitched it up it would have healed in a few days and that would have been the end of it. It caused her no trouble only the extra weight to carry.

# Nothing the Matter With California

California's fame in crop production has traveled 'round the world.

In variety California stands unequalled, producing 102 separate and distinct crops.

In quality the products of California's fields, orchards, groves and vineyards measure up to the highest standards conceived by the best agricultural practice in the world.

In quantity, measured in terms of production per acre, per farm and per state, California yields greater farm wealth year in and year out than any other state in the Union.

These notable achievements have been due to the enterprise, the ingenuity and the hard work of California people. No other state has such a complex variety of farm problems—so many crops, so many plantings and harvests, and such a wide variety of soils and possibilities.

And California has progressed. No other commonwealth can boast of such great cooperative marketing agencies—nor of so many successful agencies that connect its producers with the markets.

When farming in the wheat belt, the corn belt and the cotton belt was suffering from adverse marketing conditions, marketing agencies of the California producers were pouring steady streams of gold into the Golden State, maintaining its reputation and its credit and fulfilling the predictions of its staunchest admirers.

California's problems are not the problems of those states that have not progressed so far in scientific farming.

There always has been and there always will be a distinctly different agriculture in California.

Realizing that the production of 102 kinds of crops, on many kinds of soils and under many conditions, requires almost unlimited thought, study and investigation, it has been the policy of California Cultivator to meet the problems of California food producer by securing the services of writers and contributors from all sections of the state who are not only familiar with California conditions but who are especially distinguished and efficient in the particular subjects concerning which they write.

Sixty-two men and women from among California's ablest agricultural writers prepare the reading matter that appears in California Cultivator. This staff will answer in the columns of California Cultivator any question pertaining to crop production, stock, dairying, poultry, bees—any farm problem or legal matter, to which there may be an answer, free of cost.

No other farm paper in America, regardless of the number of subscribers served, answers so many farm questions.

A state farm paper like California Cultivator, devoted exclusively to a specific section of the United States and its problems, and thoroughly organized to cover that section with all its complex agricultural problems, found nowhere else in the United States, is best prepared to furnish service and reading matter for that section.

## FREE SERVICE

# for Better Compression & More Power use better oil

"The use of Zerolene, as recommended, results in low internal friction and perfect piston seal, under all conditions of engine operation."
—*Board of Lubrication Engineers.*

If your tractor is not delivering all the power and gasoline-mileage you have a right to expect of it, maybe poor lubrication is the reason.

The *right* oil clings to the bearing surfaces, and maintains full compression under all operating conditions. The gain in power and gasoline-mileage may be as much as 20%.

*Perfect Piston Seal*

Comparative tests show that Zerolene maintains a better piston seal than any other oil now offered to the public, whether the piston clearance of the engine is small or comparatively large.

The use of Zerolene reduces carbon trouble to a minimum. A comparatively small amount of carbon is deposited, and this, being of a soft, flaky nature, is for the most part blown out with the exhaust.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your truck, tractor, or automobile.

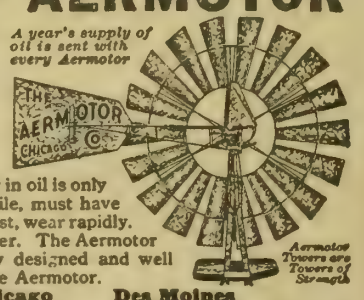
# THE AUTO-OILED AERMOTOR

## A Real Self-Oiling Windmill

*A year's supply of oil is sent with every Aermotor*



Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

# Who Whipsaws the Farmer?

Practically every farmer who is doing business in America today is up against a situation which is taking a large part of his legitimate profits.

Whatever you raise—hogs, wheat corn, eggs, beef, dairy products, garden stuff—you're fighting against disorganized market conditions, erratic public taste, manipulation, and the lack of the effective coöperation which might whip the business of farming into line for real profit.

No wonder the farmer works long hours every day only to find a slim bank balance (if any) at the end of the year—even this year with bumper crops!

## BIGGER PROFITS *ARE* POSSIBLE

In a new series, starting at once, *THE COUNTRY GENTLEMAN* takes up this problem. Fifty trained investigators are going over the whole business of farming, point by point, crop by crop, and the result of their investigation will be published in the next thirteen issues.

This is no muck-raking campaign that makes a lot of noise and gets nowhere. No rehash of the old stuff—no mere theorizing, but a straightforward, thorough analysis of what is happening today in farm markets, and the remedies that are being devised by practical and successful farmers.

## Dollars in Your Pocket

You can't afford to miss these thirteen issues. They will tell you concretely what you can do; they will put dollars into your pocket.

*If you act promptly, we will send you thirteen issues of THE COUNTRY GENTLEMAN, starting with next week's copy, and including this helpful marketing series, for only 25c.*

You know *THE COUNTRY GENTLEMAN*. If not, ask your county agent or your banker what he thinks of it. It's a real "dirt" farmer's weekly. Its contributors include the men who know most about farm problems today. You get 40 pages in each issue, packed full with meaty, practical ideas.

## Farming as a Business

It's the *business* end of farming that *THE COUNTRY GENTLEMAN* keeps pounding away at, issue after issue. It presents a big, nation-wide view of the problems of the farmer as our biggest business man. It finds out what practical farmers everywhere are doing to make more profit, and gives you their big range of ideas and experience. Week by week you get the sound, rock-bottom practice that fits *your* farm.

Good, live, readable stories. Practical pages for the "Missis." Interesting educational stories that your boy and girl will eat up.

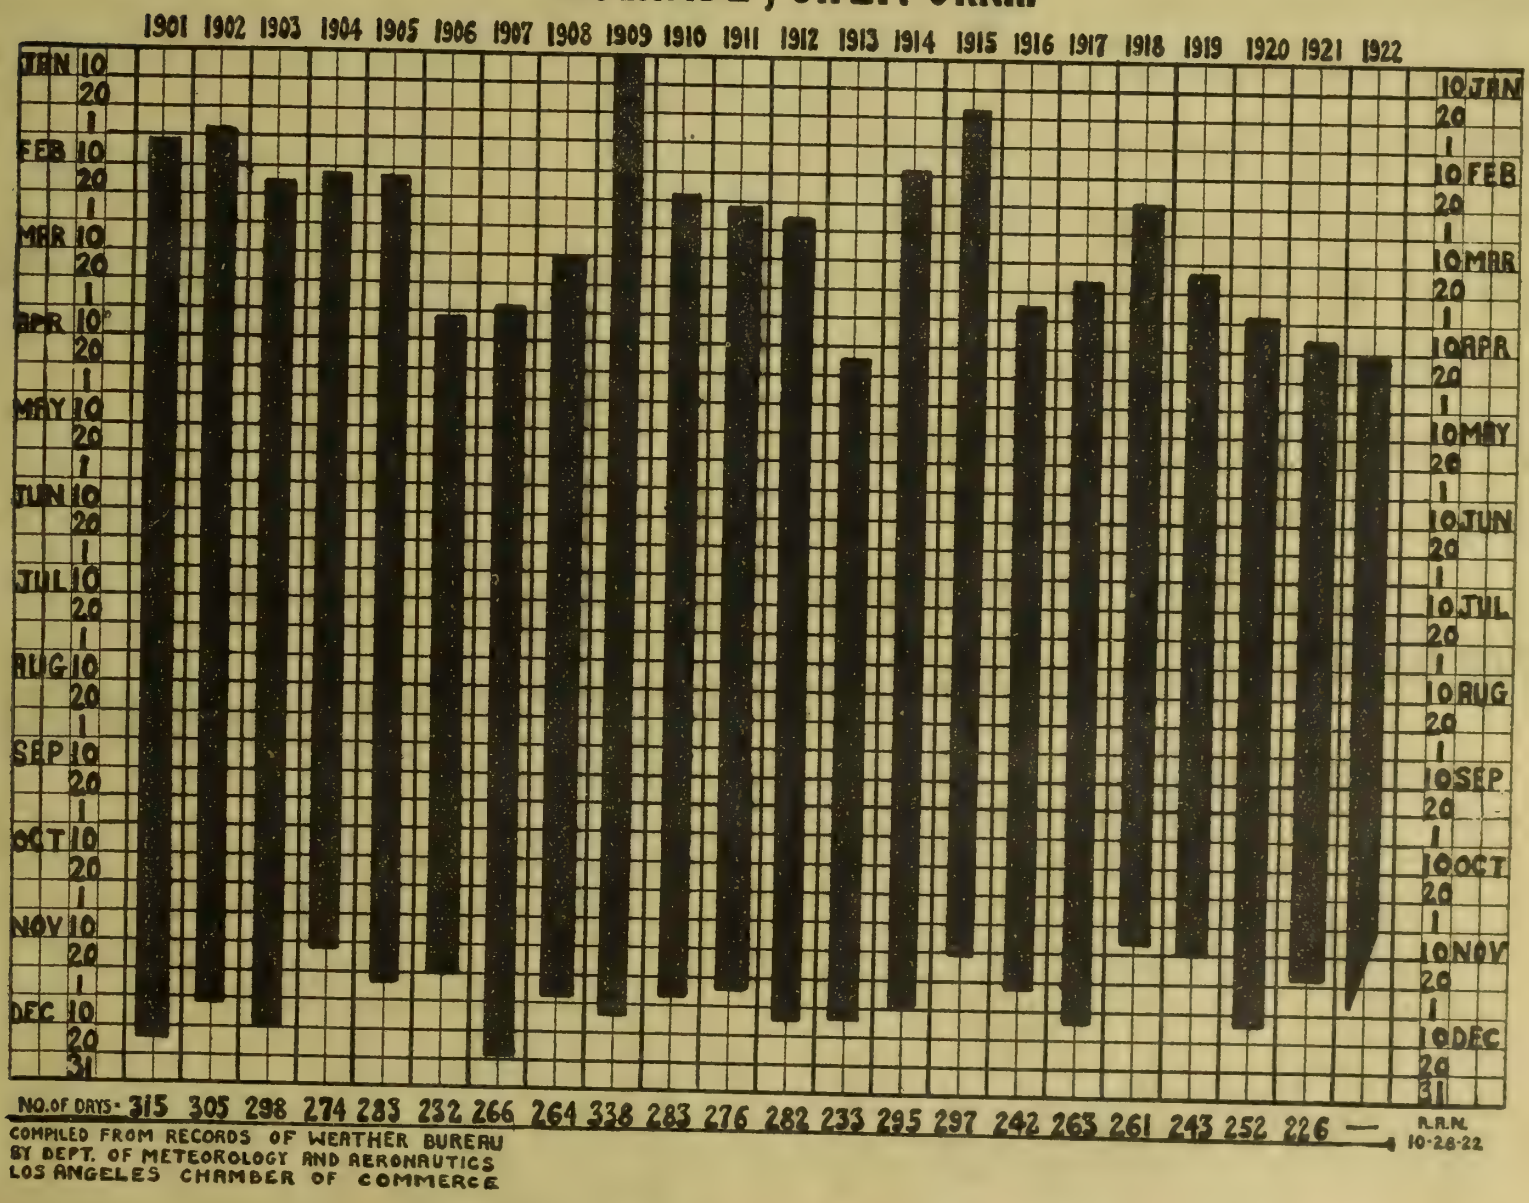
Vol. LIX — November 4, 1922 — No. 19

# Temperature Records for Twenty-two Years

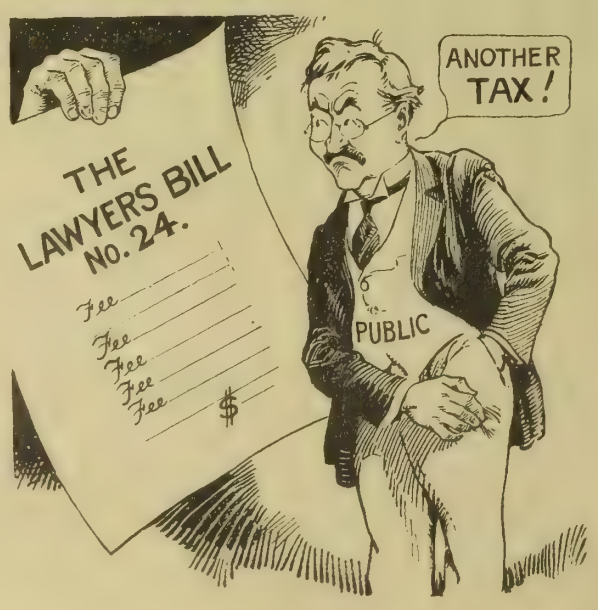


The black columns show the length of the growing season for each year since 1901. The top of the column corresponds with the date of the last day with a temperature of 32 showing the date of the last frost of the winter. The bottom of the column indicates the date of the first frost of autumn.

# You Don't Want a Lawyer
## (and His "Fee")
# Between You and Your Banker or Business Advisor

The following organizations have officially denounced the "Lawyer's Bill" and asked their members to vote and work for its defeat:

**California State Grange**
**California Federation of Labor**
**Brotherhood of Locomotive Engineers**
**Brotherhood of Locomotive Firemen**
**Order of Railway Conductors**
**Order of Railway Switchmen**
**San Francisco Chamber of Commerce**
**California Bankers Association**
**Fifty-Four Local Boards and Associations of Realtors**



**If you want to PAY for it, vote for it**

Thousands of people—including many lawyers—come to BANKERS and BUSINESS MEN for advice upon business matters.

Most of the advice given is LEGAL advice. Every contract and every property right rests upon the LAW. Everyone is supposed to know the law, and bankers and business men often know as much about ordinary business law as many lawyers. MORE than some lawyers.

This advice by bankers and business men is ordinarily given FREE and is usually sound. The proposed bill makes it a crime to continue it.

LAWYERS prepared the Bill, designed, planned, intended for one sole purpose: to cut the people off from sources of advice upon business matters in which matters of law are involved, except one source—GO TO A LAWYER and pay him a fee.

LAWYERS introduced it in the Legislature, LAWYER-politicians "pushed it through" to a LAWYER-governor, who signed it.

## KILL the LAWYERS BILL

**Easy to Find It. Top of Sixth Page on the Official Ballot**

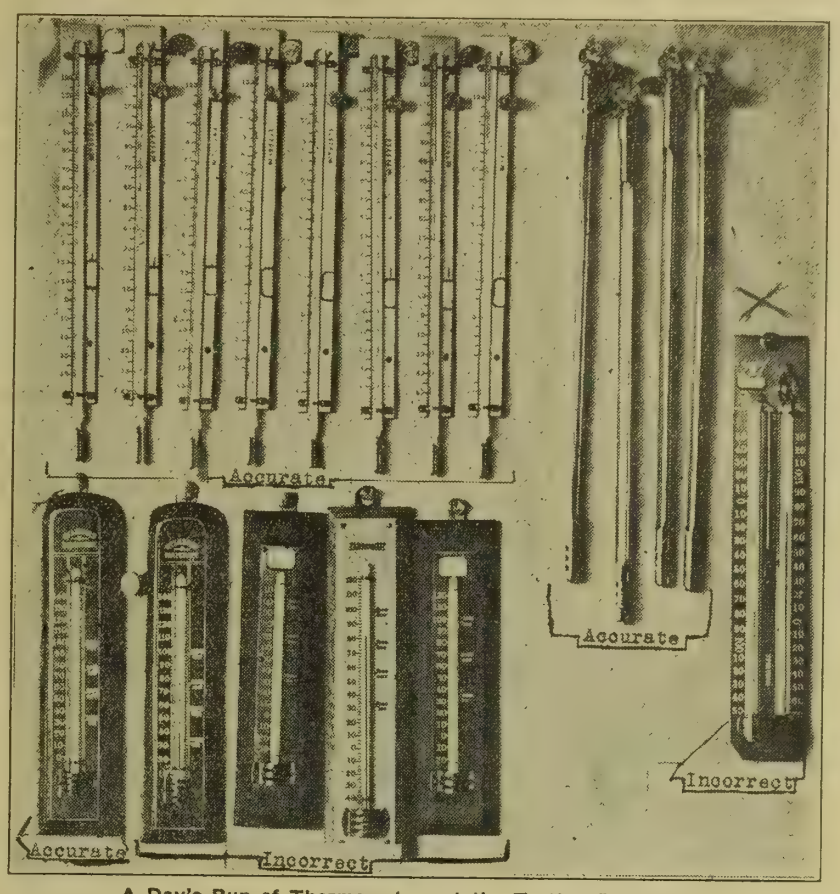
## For Protection From Frost and Insect Pests

By Dr. Ford A. Carpenter, Manager Department of Meteorology and Aeronautics, Los Angeles Chamber of Commerce

"When shall we begin to get ready for frost?" and "When may we safely fumigate?" These are questions asked during the autumn and spring by the orchardists in California. These queries may only be answered after studying accurate temperature records.

It is manifestly a waste of time and effort to take temperatures with inaccurate thermometers; the first requisite is a dependable thermometer. During the past two years the instrument testing department of the Los Angeles chamber of commerce has certified over 600 thermometers. Half of these were used in frost protection and half in fumigation. There were more than twice as many thermometers submitted for test as were found fairly accurate. When one considers the large number of worthless thermometers that have been in use in the citrus groves it is no wonder that there has been such a useless expenditure of fuel oil in frost protection or the unnecessary loss by low temperatures. These losses aggregated huge sums in the past and are slowly lessening owing to the better class of thermometers now to be found in the orchards.

It may be a matter of considerable satisfaction to California citrus growers to know that owing to the demand for accurate instruments, the proportion of dangerous instruments decreased from 27 per cent during the first year's tests to 10 per cent at the close of the present year. It is believed that within a very few years all of the inaccurate thermometers used by orchardists will have been discarded and their places taken by dependable instruments.



**A Day's Run of Thermometers at the Testing Department**

Out of a dozen thermometers sent in for test, as shown by the top row, all were sufficiently accurate to be given a certificate and a seal. A small leaden seal is shown attached to the top of each thermometer-tube. Five ordinary thermometers were brought in by one orchardist and four were found to be incorrect. The thermometer with the "X" above it was in error 6°; this kind of instrument is more often inaccurate than accurate.

### Frosts—First and Last

The weather bureau has always dealt most liberally with Southern California horticulturalists. In no other section have better equipped cooperative and regular stations been established and maintained. The federal government realizes the importance of the fruit industry and has always extended every legitimate aid to the citrus orchardist. This is shown by the network of weather stations in California and the long and satisfactory records of meteorological observations. One of the best of the cooperative stations is that at Riverside. Riverside has no earlier autumn, or later spring frosts than other localities and it may safely be used as a criterion of frosts generally in the citrus regions of California south of the Tehachapi. The uninterrupted record of 22 years makes a most interesting and valuable study. In order to present the data in a graphic form studies of the growing season are depicted in chart on cover in the form of parallel columns, each column representing by its length the last date with a temperature of 32 degrees in winter and the first date with the same height of the thermometer in the autumn.

The earliest frost at Riverside occurred within the first ten days of No-

(Continued on Page 474.)

# A Real College of Agriculture

By C. B. Messenger

A COLLEGE of agriculture is much like the humans who enter into its making. It is in swaddling clothes; it learns to stand, to walk, to run, though perhaps with some tardiness; ultimately it may talk. It has its moods, its ups and downs; it may even be a bit temperamental.

Today, Tuesday, October 24, 1922, the College of Agriculture of the University of California is very happy. It is upstanding, very straight and talking fluently. It is dedicating two great, well equipped buildings, one to horticulture one to dairy industry. The regents, the dean, the directors, the faculty all are happy because of better equipment and better opportunity for instruction, more, because the people of California have recognized work already done and the need for better work yet to do.

The last legislature appropriated nearly a half million for the two departments, horticulture and dairying. The buildings are completed and equipment is nearly all installed. They are both now dedicated and functioning in California education. They are constructed of hollow tile with reinforced concrete frame and are thoroughly modern in every respect. They were planned after a thorough study of similar buildings at other institutions.

### The Dairy Industry Building

The dairy industry building is a two story structure 234 feet long and 60 feet deep, with a dairy manufacturing wing running back from the east end of the main building 206 feet. This wing will provide facilities for a large creamery laboratory which will be used for teaching advanced students and those electing practice work in butter making, cheese making and ice cream making and in market milk and milk condensing. It will also provide facilities for investigation of the problems relating to the manufacture of high grade dairy products. A milk and cream receiving station, a student cheese laboratory and refrigerating, ice making, storage and machinery rooms are also provided.

### The Horticultural Building

The building has two stories with basement in one end. On the first floor are the offices of the botany division, class rooms and laboratories. There is an auditorium with seating capacity of 250.

On the second floor are offices, research laboratories, departmental libraries of the divisions in this building. In addition to being used as a reading room, informal classes will meet here for round table discussions. Chemical, histological, and general research laboratories are in this building. The divisions will be fully prepared for an intimate study of such problems as sour sap, frost and pest resistance of plants, pollination and sterility, root stocks and pruning.

Some of us who saw the dedication of these fine structures today could not refrain from looking backward. We recalled the days when Dr. Hilgard and Prof. Wickson were practically the only faculty and the faculty was housed in the little old shed of a barn by the stream flowing through the campus at Berkeley. That constituted the "Cow College."

Then came the purchase of nearly 800 acres at Davis and the real beginning. That was less than a score of years ago. That I might tell Cultivator readers I came up to view the site and tell of the work beginning. It was a great barley field of very raw land. A tank house was already built and the creamery under way. To reach the farm I was told to "go down the road a ways." "You'd better take a stick to poke the hogs out o' way." The fences and corrals for pig sties were moss covered and tumbling, no sidewalks, deep dust, dying vineyard —everything wrong.

In writing my story then I subdued the discouraging and boosted as best I could, but it was heartbreaking to think of taking boys from attractive farm homes and "educating" them in the midst of such surroundings.

Today the repellent features are gone. Tasteful cottages, green lawns, paved streets have come in the town of Davis. There are a score or more of fine buildings on the university farm. They are well equipped and well manned.

It may well be a proud day for the College of Agriculture of the University of California.

# Agricultural News Notes of the Pacific Coast

## Northern California

Orland has shipped six carloads of almonds.

Pacific Coast eggs, best quality, sold in New York last week at 74 cents.

The California Wool Growers will meet in annual convention at Stockton, November 16-17.

Prune and apricot growers of the state will meet in convention at Berkeley, November 13-15.

Almonds are selling well and growers are urged to clean up the orchards and get fruit into the market.

Yolo, Colusa and Solano Wool Growers will hold their annual election at Woodland, November 10.

Charles E. Humbert of Cloverdale has been elected state director for the Sonoma County farm bureau.

The Canning Peach Growers Association has raised its size limit on No. 1 peaches from 2¼ to 2⅜ inches.

Boys and girls who have engaged in agricultural work held a convention at University Farm at Davis last Saturday.

Glenn County has a new Mutual Insurance Company. Membership is now 120, mostly of farm bureau members.

The 55th convention of the California Fruit Growers and Farmers will be held at Sacramento, November 21-23.

Tehama County reports 400 feeder lambs weighing approximately 60 pounds sold recently for 11¼ cents per pound.

Wool growers meetings for November are: November 4, Marysville; November 6, Fresno; November 8, Bakersfield; November 10, Woodland.

On October 12 there were 11,801 cases of eggs in cold storage at Santa Rosa; last year, 1496 cases; in Petaluma, 20,988 cases; last year, 22,763 cases.

A hemp manufacturer from St. Paul has been discussing with Livermore Valley ranchers possibility of raising hemp in sufficient quantity to justify building a factory.

County and state highway commissions are cooperating with the federal bureau of roads in making traffic census of the state to be used in future road building.

Frank W. Brandstatt of Yuba City was adjudged high winner of the Sutter County peach contest. His score was 97.474 on orchard yield of 24 tons, 591 pounds to the acre.

The Central California Wool Growers Association has completed arrangements for holding the 1922 convention of the California Wool Growers Association at Stockton, November 16 and 17.

It is announced that the $1,300,000 advanced to rice men of the Sacramento Valley last year by the war finance corporation has all been paid back. Agreement has been made to advance $1.50 per sack on this seasons crop.

A conference of fruit growers is called at the University of California, Berkeley, November 13-15. Pear Day will be November 13; Prune Day November 14 and Apricot Day November 16. In connection there will be a fruit show held in Hilgard Hall.

## Central California

Lindsay is to have a chrysanthemum show on November 8.

Turlock shipped nearly 1,000 acrs of watermelons this year.

Santa Cruz closed a most successful agricultural fair last Saturday night.

Modesto grape shippers were relieved by receipt of 16 refrigerator cars on October 20.

"Better roads into Sequoia and Gen. Grant national parks" is the slogan of the San Joaquin Valley.

The second annual Pacific Dairy Products show will be held at the auditorium in Fresno, November 13 to 18.

The Turlock-Modesto irrigation districts are planning for a celebration and festival when Don Pedro dam is completed.

Concrete bases for the steel towers of the Turlock irrigation district's power lines are finished as far as Fowler's Corner.

Fresno County's Pork Day, held last week at Kearney Park, resulted in the sale of 852 porkers at an average of slightly more than $10 per hundredweight.

Fresno ranked fourth in bank clearings of the state, with a gain of $1,239,-464, according to report of last week by the California Development Association.

An eradication campaign against the puncture vine in the Valley counties was discussed at the quarterly conference of the San Joaquin Valley Supervisorial Association at Visalia.

Clovis, Fresno County, up to October 1 had shipped 1055 cars of fresh deciduous fruits. From 20 to 30 cars are now being sent out daily but only half the number of reefers needed can be secured.

A resurvey of boundary lines between Merced, Madera and Fresno Counties has been finished. It will add approximately 1,000 acres of land to Merced County which was formerly accepted as a part of Madera.

Growers of table grapes in Stanislaus County say that car shortage has caused them serious loss. About 90 per cent of the wine grapes have already been handled and these make up about three-fourths of the county's crop.

Word comes from Hanford that the movement of refrigerator cars with Eastern shipments of grapes has not averaged more than 25 daily from King's County. If cars had been available 100 cars would have been moved daily.

In the San Joaquin Valley there are five or more cities seeking new federal buildings. $750,000 is the appropriation requested for a new post office building at Fresno, the present structure being inadequate for the needs of the community. Reedley is asking $100,-000; Modesto, $150,000, and $150,000 is requested for Visalia.

The San Joaquin Valley Supervisors Association met recently with farm bureau agents and county horticultural commissioners to plan for an eradication campaign on puncture weed. W. C. Jacobsen of the state bureau of pest control and J. B. Woodson of the state highway commission were named as advisers to the committee which will lay out plan of action.

## Southern California

Escondido is still sending out grapes in carlot shipments.

Antelope Valley deciduous fruit growers institute, November 9.

A bond issue of $100,000 is proposed for Pomona to provide new sewer system.

An apple festival was held by the Woman's Club of Yucaipa, October 27 and 28.

The annual election of the Los Angeles County farm bureau will be held November 16.

Serious fires have burned over hills and mountains in San Bernardino County the past week.

Sales of alfalfa hay are reported from Oxnard at $18. Most of it is trucked to Los Angeles.

The Legend of Tahquitz is the title of the desert play to be staged at Palm Springs, November 4 and 5.

An exhibit of fruits of the Victorville section was made at the dedication of the highway on October 12.

Brant Rancho of Owensmouth was awarded perfect score, 100 per cent, in the milk contest at Santa Cruz fair.

The state highway commission has its own force of men working at Point Magu on the Oxnard-Capistrano highway.

Three hundred San Diegans made an auto tour last Sunday to Henshaw Dam on the headwaters of the San Luis Rey.

The apricot growers institute at Ventura, October 27, was largely attended by growers from all over Southern California.

The Oxnard Citrus Association shipped 25 carloads of lemons during September. 100 cars will be the shipment for the season.

The Redlands Horticultural Improvement Society is planning for its usual fall flower show. The date has not yet been determined.

The rain of last week was doubly welcomed by the fire fighters who have been combating flames on widely scattered ranges.

A new highway is to be put through the Santa Anita ranch from Pasadent to Monrovia. It will parallel the Foothill Boulevard.

According to the federal reserve bank at San Francisco California's oil fields produced the record figure of 406,838 barrels per day during September.

The new evaporator plant at Yucaipa is turning out peaches and apples. The apples are put out in rings, and quartered for the higher class trade.

Pasadena's Flower Show held at Hotel Raymond, October 26-28, was the fifteenth annual and brought out a wonderful display of flowers and a great crowd of visitors.

Proposed sites for the agricultural college of the Southern Branch, University of California, are now being investigated by the committee appointed by Governor Stephens.

An irrigation development is soon to be started in the foothills above Pleasant Valley, one mile north of Camarillo, Ventura County. This will provide water for about 1,000 acres.

## The Coast and General

The White Mountain section of Arizona reports water scarce and stock failing.

The second annual Pacific Northwest Fruit Exposition will be held at Seattle, November 11-19.

Continued dry warm weather in Arizona is helping to produce a superior quality of sweet potatoes. Digging has begun.

A government survey of 100 citrus farms in Polk County, Florida, reports net return of 12 per cent on an average capital of $25,000.

Pastures the country over are generally short due to lack of moisture. Northwestern ranges, however, are reported in better than normal condition.

Orange picking in Plaquemines Parish, Louisiana, is in progress with the crop larger and of better quality than last year when 50,000 crates were shipped.

United States weather bureau office at Phoenix reports: "The Colorado River is unusually low at Yuma, the entire stream going into the irrigation canals of the Imperial Valley."

The government railroad from the wharves at Seward will be opened through to Fairbanks, Alaska, by January 1, a distance of 467 miles, nearly equal that from Washington to Boston

Sales of New Zealand free wool from July 1, 1921 to March 31, 1922 amounted to 615,168 bales of which 413,954 bales have been sold in New Zealand and 201,214 bales sold in London auctions.

Sweet potatoes are yielding fairly well in Virginia and a good crop is reported in Indiana and Illinois. Yields are unsatisfactory in Arkansas and in Louisiana the production is said to be less than last year.

There will be a large supply of foreign walnuts available for the Christmas trade, in fact, it is only reasonable to suppose that 35 per cent more foreign walnuts will be imported to America this year than last.

The crops of foreign walnuts are generally of better quality than for the past several seasons. Foreign production is about 35 per cent in excess of normal, and prices in this country, new duty added, are about 11 per cent less than last year.

The output of canned salmon from Alaska this year will be about the average of the past 10 or 12 years, something over 4,000,000 cases. The salmon industry ir Alaska is the source of a steady and considerable demand for timber from the national forests for box boards, piling and timbers and supports a number of local sawmills.

The wheat crop for all Europe, exclusive of Russia, is now reckoned at 235,000,000 bushels below last season's outturn, based on returns from 20 of the more important producing countries. Estimates for barley, based on 18 of the chief producing countries, show a decline over the crop of last year of about 50,000,000 bushels. Striking losses in percentages are shown as follows: Germany, 30 per cent; Netherlands, 30 per cent; Italy, 23 per cent; Denmark, 20 per cent; Spain, 16 per cent.

# Frost and Fig Trees

By Ira J. Condit, Horticulturist
California Peach and Fig Growers

MATURE fig trees are seldom seriously injured by frost in California. Young fig trees, however, are very susceptible to frost injury either in the fall before the foliage is shed, during the winter, or in early spring after the buds have started into growth. No figures are available showing the extent of the damage although numerous cases can be cited where extensive plantings of young fig trees have failed on account of repeated frost injury. Many more instances could be given of growers who have planted other fruit trees or left land unplanted on account of the difficulty of bringing young fig trees into bearing. Thousands of fig trees have been frozen to the ground for several successive seasons before they finally reach sufficient size and maturity to escape injury or are dug out as cumberers of the ground.

The fig tree, however, is not alone in its susceptibility to frost. Severe frost injury to young walnut trees is a common occurrence in California and of sufficient import to cause the publication of two circulars by the state experiment station. Frost injury to trees and fruit of the lemon, grapefruit, and orange is of such common occurrence in various parts of the state that the subject of frost protection and orchard heating is a very necessary one for the citrus grower to study. While the freezing of young fig trees is a discouraging feature of orchard production, it is by no means an injury peculiar to the fig tree or one that cannot be overcome to a certain extent.

### Injury to Fruit

Fig trees produce fruit both on new and old wood depending upon the crop and the variety. The brebas, or first crop figs, appear in early spring on wood of the previous season's growth, in fact they are present on the wood during the winter as fruit buds in the axils of the leaf scars. Severe winter weather may injure these buds so that they fail to push out in spring. The most common form of injury, however, comes from spring frosts occurring after the trees have begun to show leaf and fruit development. Such frosts occurred in the San Joaquin Valley on April 4, 1921, and April 8, 1922, injurious effects being noticed on both figs and grapes. Caprifigs were from one-fourth to one-half inch in diameter and in some districts every fig on young trees was killed. In other cases the figs were apparently not affected at first, remaining green and plump for several days; many however, eventually turned brown at the tip and later dropped off. Others were undoubtedly so seriously injured that they were incapable of caprification even though they remained on the tree. Breba figs of such varieties as the Mission and Kadota are sometimes seriously injured by spring frosts in the same manner. Since the main crop of figs appears on new wood it is seldom, if ever, susceptible to frost damage.

Mamme caprifigs set on the trees late in the season and remain during the winter. They are, therefore, very susceptible to frost damage. The real conditions which affect the hardiness of mamme figs are not thoroughly understood. Authentic records have been made of mamme figs surviving winter temperatures as low as 14 or 15 degrees Fahrenheit and yet the mamme crop is frequently seriously injured if not entirely ruined by much higher temperatures. Conditions other than temperature, such as humidity and the state of the blastophagas inside the galls, undoubtedly enter into this matter of hardiness of the mamme crop.

### Injury to Foliage

The leaves of fig trees, both young and old, are occasionally injured by early fall frosts. Light frosts do very little damage except to the most tender growth and probably hasten the dormancy of the leaves. Heavy frosts, however, kill the leaves, causing them to drop prematurely. In such cases the twigs and branches are usually frosted to a greater or less extent and such injury is much more serious than simply loss of foliage.

### Injury to Wood

As just stated frost injury severe enough to kill the leaves usually kills the branches from a few inches to several feet back of the tip. Such wood injury usually occurs as the result of early fall frosts before the leaves drop and the wood matures. Killing frosts thus occurred on November 18, 19, 20 and 21, 1921 in the San Joaquin Valley, orchard temperatures going as low as 23 degrees Fahrenheit in some sections. Serious injury followed not only to fig trees, but to walnut, apricot, peach and lemon trees. Numerous young fig trees were found to be killed back to the main trunk or clear to the ground, such injury being very apparent a few days after the freeze or at least by December 1. Frozen trees are usually pruned back heavily during the winter or early spring. On unpruned trees the injured wood dries out and cracks open; splitting of the wood at the crotches is common and in many cases the trunks of young trees split open lengthwise.

In older trees damage from fall frosts is not so readily apparent. In fact, the full extent of the frost injury of November 1921 was not realized until the spring and early summer of 1922 when the dead and dying branches showed up plainly in the tops. White Adriatic fig trees, both in orchards and border rows, were for some unexplained reason more seriously injured as a rule than trees of other varieties.

As a result of tip injury to six year old Calimyrna trees at Clovis in April, 1922, the dormant buds along the upright branches were stimulated and an abundant growth of laterals was secured during the remainder of the season. Such lateral growth showed an unexpected beneficial result in thickening up the usual naked upright branches of the Calimyrna trees. On Adriatic trees the killing of the tips resulted in forcing out a superabundance of small weak laterals which made the trees unnecessarily thick. Tip injury to bearing Adriatic and Calimyrna trees in many cases seriously reduced the vigor of the tree and the resulting crop.

Following the heavy frosts of April 1922 young fig trees in some sections were very slow in pushing out buds. The new growth which had appeared before the frost was entirely killed and both the bark and wood of the branches was more or less seriously

(Continued on Page 475.)

# This Month in the Vegetable Garden

## Northern California

By A. R. Gould

IT will be necessary this month to devote as much time as possible to soil preparation and it will be a wise plan to study conditions carefully and refer to the records of your crops and as to how the plots were planted during the last season. You can then determine what to plant for the coming season also as to the treatment of those plots used for tomatoes, potatoes, etc, as these, if troubled with fungus disease, should be limed and on no account should the same crop be planted on them next season. Trenching of all the plots is very important and good farmyard manure should be dug in.

The slight rains have as yet made little impression but if the ground is thoroughly cultivated before the heavy rains set in there will be no lack of moisture for some time to come. See that all the dried refuse from the various plots is burned or buried and all crops such as squash, pumpkins etc. stored away for winter. Any green tomatoes may be picked and placed on a shelf to ripen.

### Onions

The seed bed for all early varieties must be prepared without delay and richly manured. Have the surface very well pulverized. The following may be sown. Extra Early Pearl, White Bermuda, White Queen and Crystal White Wax. The ground should be pressed firmly after sowing and after germination has taken place a dressing of soot will be beneficial and ward off insect attacks. The seed beds should be in an open situation and the seed sown thinly in rows 18 inches apart.

### Rhubarb

This is a very useful crop to grow and fairly easy. It is however a heavy feeder and delights in a stiff loam and farmyard manure. Trenches should be dug and heavily manured to a depth of two feet and the soil well mixed at the top of the trench before the roots are planted. Roots should be placed at least two feet apart in the row and the rows must be four feet apart to allow for proper cultivation. Secure roots of Wagner's Crimson Winter, Myatt's Victoria and Strawberry. The old established plots may be renovated and some of the clumps be divided and replanted.

### Peas

Sowings of the early varieties may still be made on well prepared ground. The best dwarf types are Little Marvel, Premium Gem and Blue Bantam. Tall early varieties are Alaska, Gradus and Thos. Laxton. The rows should be at least 2½ feet apart and the seed sown thinly.

### Beans.

Cultivate between the rows of the Broad Windsor variety sown last month. A successional sowing may also be made now.

### Swiss Chard

Make a sowing of this excellent vegetable in rows two feet apart. Giant Lucullus is the best variety. It requires fairly rich soil and plenty of water.

### Lettuce

Sow Los Angeles, White Paris Cos and May King in rows 20 inches apart and keep the plot well cultivated between the rows.

### Cabbage

Plant out this useful winter crop 12 inches apart in the rows, which should be at least two feet apart, and select a cloudy day for these operations. Where poultry are kept a surplus is always valuable.

### Turnips

Sow for succession, White Egg, Purple Top and Early Snowball on rich soil.

### Strawberries and Raspberries

Keep the hoe busy between strawberry rows and plant up new plots which must be very well trenched with manure. Plant well rooted plants in rows 12 inches apart, while the rows should be 2½ feet apart. Brandywine, Oregon Everbearing, Magoon and Banner are good varieties. Raspberry canes may soon be cut back leaving them about three fee' high. Remove all dead wood or old canes and where the clumps are too thick, divide and replant. Best varieties to grow are Ranaree, a new red which is a vigorous grower and fruits over a long period, St. Regis, Cuthbert, Golden Queen and Superlative. From a commercial standpoint there are no other small fruits more profitable to grow than these berries. and an acre well planted and cared for will give very encouraging returns.

## Southern Arizona

By M. E. Bemis

A FEW days ago I visited the truck gardens of Doby Brothers adjoining Phoenix. These enterprising gardeners are making things grow in a way that is a delight. Just now and for some weeks to come they are setting out cauliflower. Incidentally they will be harvesting cauliflower very shortly from May plantings. This is an achievement that old gardeners said was impossible. The cauliflower here is from the seed saved in their own gardens from selected plants, and a part of their success they attribute to the seed.

Onions were planted some time ago and they will be transplanted during November. Last season they produced 11,000 pounds of onions to the acre from seed planted in the drill. Some that were transplanted did especially

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

## EDITORIALETTES

The cover of this issue of the Cultivator is not intended to be artistic or even pictorial. It is intended to give a fund of information at a glance, and in conjunction with Dr. Carpenter's article on the third page it will help one to an understanding of some of the problems of frost and fumigation injury.

* * *

The irrigators of Salt River Valley in Arizona are now most happy in securing the season's irrigation water without any cost whatever. Hydro-electric power generated below the dam is proving so profitable that it is paying for upkeep and distribution costs. Energy developed during the month of July totaled almost 10,000,000 kilowatt hours. This power is sold to the big copper mines and is also used for pumping water for irrigation purposes. Revenue from the sale of power is used to pay for cost of operating the Salt River irrigation project. In about ten years power should pay off the cost of all irrigation and power works, and the farmer will then get his water supply absolutely free.

## CALIFORNIA NATIONAL

The management of the California National Stock Show recently held in San Francisco gives assurance that the success of this year's event guarantees continuance of the show. Financially it was a success. As an aid to advancement and accomplishment of greater things along livestock lines it was an even greater success.

Plans are under way for a "bigger and better show in 1923."

Awards made at this year's show will appear in next issue.

## SWAT 24

Measure Number 24 "Regulating the Practice of Law" on next Tuesday's ballet may well receive a negative vote. It is possible that when some of us "render legal service" we do not render best of service to our friends. It may be "unlawful practice of law," but to ask voters of the state to make a preferred class of attorneys is unwise—it is unfair.

The farmer has never yet asked protection from the backyard lawyer-farmer who grows a pumpkin or roasting ear in his garden.

The farmer might say that gardening should be stopped and the farmer should be licensed and given exclusive rights to supply vegetables.

"The physician is licensed?" Yes, but human life was at stake and quackery must be stopped. No such serious situation confronts us as to law practice. Until farmers are admitted to the preferred class oppose such measures.

Vote no on No. 24.

## STATE HOUSING ACT

In our article last week, under the heading, "Shingle Roofs," we referred to the above measure as "Number three" on the ballot whereas it is Number five. By this time most of our readers will have received their copy of the "Amendments and Statutes" to be voted on, but we doubt if many have or will take time to read this particular measure since it occupies some 51 pages of closely printed matter and, unless our voters have developed rather more than ordinary legal ability they probably would not grasp on first reading just what the measure really intends to cover. Anyway when the members of the immigration and housing commission cannot agree on the measure we think it best to vote against it until the objectionable parts are corrected and all jokers removed.

The article by Peter B. Kyne, author of "Cappy Ricks," appearing elsewhere in this issue, under the heading "Shingle Bill" should be read by all. It is written in his characteristic style and is to the point.

## AMENDMENTS AND STATUTES

We are not going to suggest the advisability of voting intelligently on the various and diversified measures or constitutional amendments which are to be decided at the election next Tuesday. Presumably all voters have in hand the 140 page fine-type book which is sent out by the secretary of state. It is unthinkable that every voter in the state should read that book entirely through and there are few other than trained attorneys who would be able to understand the legal verbiage. There are some, however, which mean much to the wealth of California, and so far as possible thorough study should be given of the intent of these amendments and statutes. The voters of California have determined that the power of the initiative and referendum should be in their own hands. Having accepted this duty the trust should be performed. Number 1 on the ballot is

**Veterans Validating Act**—Permits state aid with money or credit to United States army or navy veterans to be used in acquiring or developing farms or homes.

**2, Prohibition Enforcement Act**—Declares unlawful all acts and omissions prohibited by 18th amendment to federal constitution and by the Volstead Act.

This is the Wright act passed by the last legislature and signed by the governor and referred back to the people because of petitions circulated after its passage. This is one of the shortest of the various measures to be voted upon and its entire reading is possible within a very few minutes. It will enable California officials to aid in support of the constitution of the United States. Financially it will add to the funds in the treasury of the state because of fines collected. Whether one likes the 18th amendment, or the Volstead Act, or not, the law of the land should be supported or else it should cease to be the law. Encouraging violation of the law can only lead to disaster.

**3, Veterans Welfare Bond Act.**—Provides for issuance of not more than $10,000,000 of bonds to carry out provisions of Validating Act, No. 1, given above.

**4, Land Settlement Bond Act.**—Authorizes creation of state debt to the extent of $3,000,000 to carry out the purposes of the land settlement act of 1921. We understand this is to provide a revolving fund which ultimately would be returned to the state treasury as settlers on the land complete the amortization period. This fund makes possible the extension of the work already carried on by the state land settlement commission of which Dr. Elwood Mead is the head. It will open a great opportunity for the farmer with limited means, will cost the taxpayers nothing, will aid in development of the state. Vote yes.

**5, State Housing Act.**—Regulates construction, alteration, maintenance, etc. of some buildings throughout the entire United States and of dwellings in incorporated cities. Is being opposed by many because of its "No shingles to be used in cities" requirements. This act is so outrageously extended, covering 104 columns of very fine type, that no one could understand in the time between now and election day. Vote no.

**6, Title Insurance.**—Authorizes legislature to classify counties by population for the purpose of regulating title insurance. No suggestion other than to apply for Torrens title and trust the state rather than companies.

**7, Exemption of Veterans from Taxation.**—Extends present exemption from taxation on $1000 worth of property to veterans released from active duty under honorable conditions, if their total property owned (including wife's) is less than $5,000.

**8, Municipalities.**

**9, Municipal Charters.**—Neither of these concern farmers.

**10, Taxation of Publicly Owned Utilities.**—If passed will tax publicly owned water works, hydro-electric plants and any public service utility.

**11, Regulation of Publicly Owned Utilities.**—Railroad commission would be given jurisdiction over publicly owned utilities. From recent utterances of the railway commission it appears that management of public utilities will be far safer when under entire control of the municipality. Vote no.

**12, State Budget.**—Those qualified say that the federal budget has been a wonderful step in advance. It makes for efficiency and common sense management. Vote yes.

**13, Judges Salaries.**—Provides that state shall pay $3,000 annually instead of half the salary as at present.

**14, Local Taxation.**—Enables legislature to provide methods of taxation of foreign securities at different rate from other property.

**15, State Taxation.**—Approves the King tax bill and provides as to taxation. Too lengthy for discussion here.

**16, Chiropractic.**—Provides for licensing chiropractics.

**17, Use of Streams.**—Permits the state irrigation districts, cities, counties or other political subdivisions to cooperate with each other in developing water or electric power, or permits flood control of streams. Vote yes.

**18, Municipal Public Works.**—Authorizes municipalities to cooperate in acquiring public utilities.

**19, Water and Power Act.**—Creates board appointed by governor, subject to recall, and provides for issuance of bonds not exceeding $500,000,000 for development and distribution of water and electric energy.

**20, Osteopathic Act.**—Creates board of osteopathic examiners appointed by the governor, to have power to license and issue certificates.

**21, Prohibiting Special Laws.**—Declares legislature shall not pass special or local laws creating irrigation, reclamation, drainage or flood control districts, but shall provide for organization and government of such districts by law.

**22, Absent Voters.**—Permits registered voters, absent from precinct because of occupation requiring travel or because of military or naval service to "vote by mail."

**23, Deposit of Public Moneys.**

**24, Regulating Practice of Law.**—This bill is because of the effort of lawyers to prevent banks, trust companies, or "unlicensed persons" from practicing law. Presumably the California Cultivator would be an "unlicensed person" in the eyes of this law and the maintenance of a column in which legal questions are answered would be impossible if this act is passed. It is possible there are objectionable features in this mattter of promiscuous giving of legal advice. Notwithstanding that it appeals to us that the attorneys are not entirely unselfish in this matter of retaining to themselves exclusive jurisdiction in the matter of law. Vote no.

**25, Judges Pro Tempore.**—Provides that attorneys may select member of the bar to try case as judge pro tempore. The judge must be approved by superior court in which he acts. Those who know say this is desirable and may be voted yes.

**26, School District.**—Permits formation of school districts situated in more than one county and issuance of bonds by such district. Vote yes.

**27, Initiative.**—Amends former constitutional act and requires increase in number of signatures of qualified electors necessary to initiative petition "when such petition relates to assessment or collection of taxes or provides for modification or repeal of this proviso, that such number be 15 per cent of all votes cast for gubernatorial candidates at last preceding election, instead of 8 per cent as now required." To simplify the above wording means that 15 per cent of the voters must sign an initiative petition. This would prevent some of the objectionable measures brought forward and at the same time put a heavy burden of expense on others which may be meritorious.

**28, Prohibiting Vivisection.**—Prevents vivisection of living creatures for experimental or pathological investigations or other purposes. The University of California maintains that if this initiative act should be passed it would prevent much experimental work and experimental feeding with animals. Livestock men as a rule also oppose it because of its jeopardizing their interests.

**29, Land Franchise Taxation.**—This is the old time single tax measure which has been before the voters for years. Every farmer should oppose it to the utmost. The burden of taxation is already too heavy on our lands. This would mean, and is intended to mean, practical confiscation of the lands to the state. Vote no.

**30, Franchises.**—Gives railroad commission exclusive power to grant franchises for street and interurban railways. This takes from the municipality the right of controling its own streets and gives great power into the hands of the railway commission. It is perhaps little concern of the farmers, but at the same time it appeals to us that municipalities may be permitted control of their own streets.

# Fruit Growers Conference

By W. V. Cruess

Pear, prune and apricot growers plan to convene at the state university, November 13-15, to discuss problems of vital importance to these industries. The meetings will be held under the joint auspices of the Prune and Apricot Growers Association, the Pear Growers Association, and the college of agriculture. The meeting place is Hilgard Hall on the university campus.

### Pear Day, November 13

The pear growers met at the university last year in a two day session and were so well pleased with the results that they have decided to journey to Berkeley a second time.

Their program will include the following subjects. The names of some of the speakers are tentative and subject to revision:

9:30 a. m., Pear Blight, Professor F. C. Reimer of Oregon, Leonard Day of university farm and others. 11:30 a. m. to 4 p. m., Question Box, 1:20 p. m., Review of Past Pear Season, F. T. Swett and Alan White, 2 p. m., Transportation of Fruits, E. M. Sheehan, 2:30 to 4 p m., California Future and Quality Fruits, Alden Anderson, E. C. Dixon, E. Chace and others. 6 p. m., banquet. 8 p. m., ten minute talks by Director C. M. Haring of the experiment station; C. H. Bentley of California Packing Corporation; Donald Hunter, president of students round table; V. T. McCurdy of San Jose; and James Mills, Sr. of Hamilton City. The pear growers will meet again on November 14 to discuss unfinished business and questions brought up during meetings of November 13.

### Prune Day, November 14

Although the prune day program is designed primarily for prune growers, it includes several papers of interest to other growers as well as study of the following list of topics will prove:

9 a. m. to 12, The Fruit Show and Round Table, Donald Hunter. Control of Prune Thrips, Prof. E. O. Essig and Horticultural Commissioner L. R. Cody. Control of Red Spider, Prof. E. R. deOng and Commissioner H. P. Stabler. Irrigation of Deciduous Fruit Trees, Prof. F. V. Veihmeyer; Dr. LeRoy Anderson of San Jose, and E. H. Clarke of Saratoga.

1:30 to 4:30 p. m., Prune and Apricot By-Products, H. Hamlin and W. R. Scott of San Jose. Dehydration of Prunes, Prof. A. W. Christie; Floyd Bohnnet of Campbell; Nathan Lester, Santa Clara; Henry Wheatley, Napa, and W. R. Kingman, Cupertino.

Question Box on prune growing. 7:30 to 9 p. m., Address, R. G. Sproul, comptroller of the university. Relation of the Quarantine Service to California Horticulture, G. H. Hecke, director state department of agriculture. Root Stock Studies in Europe, illustrated lecture by Prof. W. L. Howard, recently returned from year's study of this subject in Europe.

### Apricot Day, November 15

9 to 12 a. m., Sour sap of Deciduous Fruit Trees, Prof. Ralph Smith of Berkeley, and W. L. Quinn of Saratoga. Pruning the Apricot, Prof. W. L. Tufts. Discussion by growers.

1:30 to 3:30 p. m., Brown Rot of the Apricot, B. A. Rudolph, Mountain View experiment station. Brown Rot in Monterey County, T. Mayhew, farm adviser. Brown Rot in San Benito County, W. J. Tocher, farm adviser. Brown Rot in Alameda County, C. J. Robinson, farm adviser. Discussion by several growers.

3:30 p. m., Question Box.

### The Fruit Show

In Hilgard Hall, where most of the sessions will be held, there will be on display several hundred varieties of fruits from different districts of the United States. In addition, there will be two large rooms filled with canned, preserved, dehydrated and otherwise preserved fruits and fruit products. Many new and promising fruits will be on exhibition.

The meetings are open to anyone and everyone interested in pears, prunes or apricots.

# Sutter County Peach Growers Contest

The list of awards made at the third annual peach growers' contest shows some interesting figures and indicates what is possible in the way of production where proper care is given and soil and climatic conditions are ideal.

The following list shows the names of the prize winners together with the acreage productions:

### Tuscans

Two year and up to three year old trees—1, John Storm, Yuba City. 339 lbs per acre. 2, S. Severini, Live Oak. 100; 3, H. T. Hosford, Yuba City, 44.

Three year and up to four year old trees—1, O. R. Mitchell, Yuba City, 3 tons, 1802 lbs per acre.

Four year and up to five year old trees—1, O. R. Mitchell, Yuba City, 3 tons, 1802 lbs per acre; 2, Aaron & Brown, Yuba City, 1 ton, 1822.

Five year and up to six year old trees—1, L. H. and Alice Woodworth, Yuba City, 9 tons, 1378 lbs per acre.

Trees of any age—1, A. F. Soderlund, Yuba City, 16 tons, 1702 lbs per acre. 2, Harry L. Holst, Tudor, 14 tons, 1450; 3, J. G. Kussenberg, Yuba City, 13 tons, 1634; 4, Mr. and Mrs. L. D. Baun, Yuba City, 13 tons, 299; 5, Fred Kopp, Yuba City, 12 tons, 1294.

### Midsummers (Various Varieties).

Two year and up to three year old trees—1, G. C. Galbraith, Yuba City, 1711 lbs per acre; 2, F. L. Hutchinson, Yuba City, 1529; 3. John Storm, Yuba City, 427.

Three year and up to four year old trees—1, Mrs. L. Haume, Live Oak, 6 tons, 852 lbs per acre. 2, O. R. Mitchell, Yuba City, 6 tons, 788.

Four year and up to five year old trees—1, Walton and Hexter, Yuba City, 9 tons, 473 lbs per acre.

Five year and up to six year old trees—1, J. S. Johnson, Yuba City, 22 tons, 380 lbs per acre. 2, G. F. Rednall, Yuba City, 11 tons, 1092.

Trees any age—1, J. S. Johnson, Yuba City, 22 tons, 380 lbs per acre. 2, A. F. Soderlund, Yuba City, 22 tons, 91; 3, C. A. Johnson, Yuba City, 20 tons, 1509; 4, F. B. Clark, Gridley, 20 tons, 1404; 5, Walton and Hexter, Yuba City, 20 tons, 891.

### Phillips

Two year and up to three year old trees—1, F. L. Hutchinson, Yuba City, 362 lbs per acre. 2, John Storm, Yuba City, 177.

Three year and up to four year old trees—1, E. B. Estes, Live Oak, 3 tons, 1284 lbs per acre. 2, L. M. Buvee, Yuba City, 2 tonsfi 1569.

Four year and up to five year old trees—1, Walton and Hexter, Yuba City, 8 tons, 590 lbs per acre.

Five year and up to six year old trees—1, C. F. Rednall, Yuba City, 12 tons, 1067 lbs per acre. 2, Aaron & Brown, Yuba City, 10 tons, 20.

Trees of any age—1, Frank Brandstatt, Yuba City, 24 tons, 591 lbs per acre. 2, H. S. Queen, Yuba City, 21 tons, 1295; 3, A. F. Soderlund, Yuba City, 20 tons, 1508; 4, C. A. Johnson, Yuba City, 20 tons, 829; 5, F. L. Hutchinson, Yuba City, 19 tons, 416.

# Shingle Bill

By Peter B. Kyne

There be three things that interest me profoundly. Yea, four. The way of a man with a maid, the way of a serpent on a rock, the way of an eagle in the air and the way of the ingenious person who framed the state housing act, familiarly known as the "Shingle Bill", No. 5 on the ballot at the November election, and then slipped the infamous bill past the noses of the lumber interests of California, through both houses of the legislature and up to Governor Stephens for his signature. Wherefore, we are saddled with the expense of a referendum election on the state housing act.

Somebody has referred to this bill as "a woodpile wrapped aroung a Nigger". At any rate, the clause that outlaws the use of shingles for roofs is cunningly tucked away in a wilderness of verbiage that seems fairly to drip with pity for the misinformed who use shingles and thus subject themselves to a hitherto unsuspected fire risk. Under the slogan of "Safety First", the state housing act would not only render building more expensive, but it would, by vicious legislation, outlaw the manufacturers of shingles and substitute patent roofing, alleging as an excuse for such mendacity that fire risks are thereby greatly reduced.

The question is: Are they? Not so you'd notice it. Shingles are made from two singularly non-inflammable woods, redwood and red cedar. Neither of these woods contains the slightest percentage of resinous products, and experience has demonstrated that they are extremely slow to ignite from such chance sparks as may fall upon them from an adjacent conflagration.

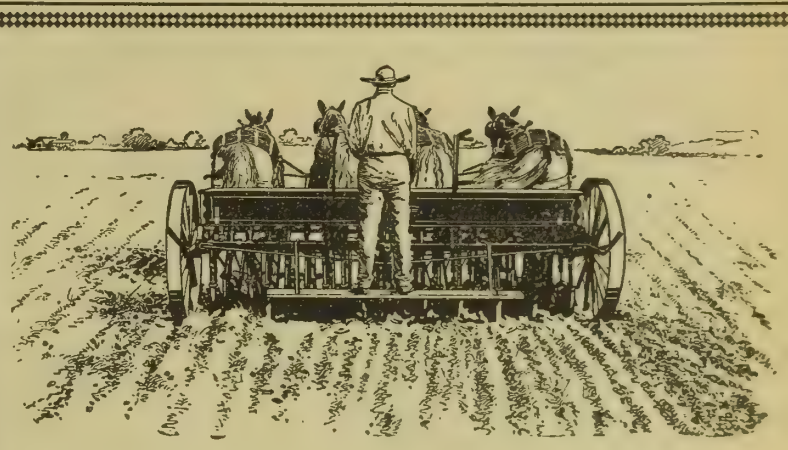
The shingle industry is one of the oldest in California. Millions of dollars are invested in it, thousands of people draw their sustenance from it. It is a cheap, popular, durable and time honored roofing material, popular with the masses and never before spoken of disrespectfully, not even by firemen! The state immigration and housing commission has hastened to its defense by publicly repudiating the state housing act when their attention was called to the pious hypocrisy of the alleged intent of the bill.

The state housing act, if passed, will place California entirely at the mercy of the manufacturers of patent roofings. Wherefore, if competition is the life of trade, it would seem the part of wisdom, if not common justice, to preserve the modest shingle yet a little longer and not relegate it to the limbo of forgotten things at (I suspect) the behest of some extremely adroit competitors.

Down wid 'em!

---

Two new branch associations of the California Wool Growers Association have been formed, the Humboldt Wool Growers Association with Wm. Perrott of Loleta as president, and the Mendocino, Sonoma and Lake Counties Wool Growers Association, Casper Ornbaun, San Francisco, president.



# Protect Your Investment

It costs real money to prepare good seed-beds. It costs real money to have a fertile soil, but no matter how fertile your soil nor how good the seed-bed, if the seed is not properly put in the yield is bound to suffer. The returns on your investment will be seriously reduced. Safeguard it by using a dependable grain drill.

## Kentucky Grain Drills

When you drive into your field with one of these dependable drills you may rest assured your seed will go in the ground right. None will be cracked, nor will there be any skipping or bunching. The seed will be evenly distributed in uniform seed trenches and covered to the proper depth. Every grain will get a square deal.

They are built for horse or tractor power. Grass seed attachments always available. Furrow openers for any soil.

See the McCormick-Deering dealer about these good Kentucky grain drills.

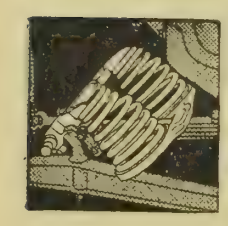
# Make your closed Ford
## the easiest riding car on the road



THE Ford Sedan or Coupe equipped with Hassler Shock Absorbers is the easiest riding car on the road — regardless of price, weight or wheelbase. That is the verdict of thousands of enthusiastic Hassler users.

On closed Fords, Twin Type Hasslers are duplicating the remarkable performance that gave single type Hasslers for open cars a world-wide reputation even before closed Fords were made and sold.

Hasslers absorb jolts that annoy you; they minimize vibration that tires you out. They stop sidesway and prevent accidents. Try rounding a sharp corner in a Hassler equipped closed car. See how steady and stable is the movement of the body.

Every year Ford closed cars become more popular. Every year sales of Twin Type Hasslers almost double.

Only Hasslers can give you Hassler results. Insist on them. You can test them ten days at our risk.

### VEGETABLE GARDEN FOR NOVEMBER IN SOUTHERN ARIZONA

(Continued from Page 469.)

well in quality and for that reason they will probably transplant the entire crop this year.

They will gather beets, turnips and radishes next month from plantings early in September, and they will continue to plant these as well as carrots and the various other vegetables. The list of plantable things for November includes beets, carrots, lettuce, onion seed and onion sets, parsley, parsnips, peas, radishes, spinach, turnips, cabbage plants and cauliflower plants.

A considerable acreage has been put out this season to winter lettuce, but whether it will be greater or less than the acreage last year cannot be said at this time. It is reported that the acreage of lettuce in the Imperial is considerably larger than last year From general observations without having made any accurate survey I am inclined to think that the number of American gardeners is on the increase There are numbers of gardeners who have done well. Usually it is those who stick to one or two varieties, or at least do not attempt to grow everything that can be grown. In the case of the Doby Brothers just mentioned the older brother is an expert irrigation engineer and keenly observant as well. He is giving very careful attention to all gardening problems and is on the job all the time. The younger brother is likewise on the job all the time, but a part of his job is the sales end, and this is an extremely important part of the business. When the marketing is done for the day he is back in the field. This is the kind of team work that counts in any business.

As usual there are many who are planning the home garden, and many others that ought to who will not Those who do say it pays big dividends on the amount of time and money expended.

# This Month in the Ornamental Garden

## Southern California

**By Ernest Braunton**

THOUGH bulb planting began in October, the real bulb month throughout the state is November. It is really safe now to plant any and all kinds of bulbs. Never plant bulbs in dry soil, have it as damp as it can be worked, and do not overwater bulbs until tops are up and leaved out. Too much water on inactive bulbs will rot them.

Rotting of bulbs in general begins at the crown or root area on the lower side, for that part gets the most water and often sets in mud. But in true lilies, bulbs that have scales, decaying vegetation in soil often starts heart rot. Unless soil is fairly loose and well drained make hole for each lily bulb, drop in a little clean sand, set the bulb upon it and drop another handful of sand on top of bulb so it will settle down among the scales. This will prevent entrance to the heart of soil containing decaying matter. Plant lily bulbs six inches deep.

Bulbous plants are not the only ones that suffer from excess soil moisture during the colder months; nearly all plants do. Now is a good time to prepare soil for later planting by digging it up as deeply as possible. You cannot stir it too deeply. You should stir it to a greater depth than any roots will go during winter. Then you will know that excess water can drop below the root zone and not imperil plant life through stagnant soil water, the latter being at all times poisonous.

**Seed Sowing**

Seeds sown now will bring an abundance of flowers for early spring, just as the cold weather is passing away. Sow candytuft, clarkia, larkspur, leptosyne, gypsophila, calendula, centaurea, poppies and stocks. Any hardy annuals or perennials may be sown now.

Nothing gives more return for the investment at this time of the year than a sowing of mixed California wild flower seeds. Sow them broadcast, rake the surface well and let the rains bring up the seeds. As a forerunner to this sowing it is well to water the soil well two or three weeks before seeds are sown. The watering will start all weed seeds and the surface may be hoed to kill them. Then when the flower seeds start they will have no competition from weeds.

In practically frostless sections or if a warm sheltered spot be found this is a good time for propagating herbaceous plants. Some of these, such as heliotrope and begonia, are injured by even light frosts but if sheltered will readily root from cuttings in a box of sharp sand. Coleus, fuchsia, impatiens, marguerite, and others of this class will also root easily now. Roses that have been dormant or partially dormant, will yield cuttings that are ideal for propagation. Use no wood smaller than a lead pencil, not more than six inches long, and put below soil all but one or two buds. Do not force cuttings into soil, but make holes for them with a stick slightly greater in diameter. It may be that in pruning rose bushes the surplus wood may be used, but in pruning cut away all wood smaller than a pencil.

## Northern California

**By A. R. Gould**

WE are now approaching the busy season in this section of the garden and should be making our plans for transplanting, laying out new grounds and general reconstruction. Many of the beds and borders will require cleaning out and preparation of the soil for a rearrangement of the planting. This will apply especially to the perennial borders. Very often the shrubbery has been closely planted and should be thinned out. A general scheme should be outlined and a plan drawn up to work by to avoid mistakes.

It is a good plan to make note of your favorite shrubs and use them as effectively as possible in groups. Borders may be left in front of the groups for planting with flowers. Berried shrubs such as Crataegus coccinea and Lelandi, cotoneaster pannosa, C. accuminata, and C. horizontalis are all beautiful. The berberis also are worthy of a place in any garden and they are all very hardy. Flowering shrubs are deutzia, spirea, ceanothus, Philadelphus, or mock orange, abelia, and we must not forget the flowering ornamental peaches, cherries and apples. Groups of ericas make good showing. Tamarix, a very graceful pink blossoming shrub, is most effective in a group, as also is the Spanish broom which flowers for quite a long period during the summer months. Subjects suitable for hedge plants are Lonicera niteda, English and California privet, California cherry and pittosporum eugenioides and English box. An important fact to bear in mind is to prepare the soil before planting as nothing will thrive in poor soil for long and a hedge is an important feature of the home grounds, hence it is necessary to dig a trench at least two feet deep and mix thoroughly with manure. Monterey cypress should only be used as a hedge or windbreak on an extensive place as it is a very heavy feeder and needs lots of room. Many mistakes have been made by planting this in small gardens.

**Bulbs**

This is planting time for bulbs. First come the snowdrops and crocus and freesias, then narcissus or daffodils, hyacinths and tulips. Then follow on gladiolus, montbretia and Watsonias. There should be no delay in planting the first two groups. The beds must be well prepared if good results are expected. Narcissus are very satisfactory for naturalizing in the lawn under trees. A very fine bulbous flower of purple and pale blue is babiana, growing six to eight inches high and unfortunately not very often seen in our gardens. It will grow, however, in almost any situation. Among others which we seldom see in our gardens,

in spite of the fact that they are natives of this western coast, are the calochortus in wide range of color. They should be planted three inches deep in fairly good garden soil.

We shall deal later with liliums which comprise a large group and should be more largely represented. The muscari is a dwarf type of flower resembling a hyacinth and blooms in blue and white shades. It makes a very beautiful show if massed in the border or naturalized in the lawn.

**Flowers for Winter and Spring**

If a general sowing was made last month of foxgloves, Canterbury bells, snapdragon, viola, pansy, columbine, godetia, clarkia, primula, Sweet William, cineraria, etc., they will soon be ready for transplanting to boxes, and attention should be given to watering after they have been removed from the seed bed or during the dull days many tender seedlings will be lost through damping off. Calendulas will be the first to plant out to the beds and borders and will furnish bloom for all the winter. Seeds sown directly in the ground where they are to flower, such as nemophila and California poppy must be thinned out to 5 or 6 inches apart.

**Dahlias**

The tubers of these should be dug and stored for the winter. Label them before digging and note color, etc.

**Sweet Peas**

Seed may still be sown in well prepared trenches and the ground well cultivated around those previously sown as these should be several inches high. If the birds are troublesome cover plants with netting.

## WEED KILLERS

That it is possible to kill weeds through use of chemical sprays is a matter of common knowledge. How to kill weeds in growing crops, such as cereals, lawn grass, etc., and not seriously injure the crop, is a more difficult matter, but it can be done.

One of the most serious problems with which the farmer has to deal is the killing of weeds with underground runners, such as morning glory, Johnson grass, and Bermuda grass. California has thousands of acres lying idle because of serious infestation by these weed pests. Between Los Angeles and the sea the writer last week saw broad acres almost completely covered with wild morning glory or bindweed.

The Cultivator has from time to time published government formulas for weed sprays, but many complain of lack of equipment for properly compounding these sprays, also of the labor and unpleasantness of mixing the materials. There are various commercial sprays now on the market that are mixed according to government formulas, or very close to them, that are very effective. The writer visited fields where one of these had been applied to pests ranging from morning glory to poison sumac or oak. Five different weed pests were apparently killed. Morning glory roots were traced down three feet in the soil and all of them were dead from one spraying applied on the surface.—E. B.

## STORED POTATOES NEED AIR

The discolored, blackish area sometimes found in the center of potatoes and commonly known as blackheart is due largely to insufficient ventilation during storage, according to the potato expert at the New York agricultural experiment station at Geneva.

Where potatoes are to be stored at temperatures below 45 degrees Fahrenheit, it is said to be safe to pile them to a depth of six feet without danger of producing blackheart in the potatoes on the bottom of the pile. If the storage place has a temperature of 50 degrees or more, as is usually the case in most home cellars, it will be unsafe to pile the tubers to a height of more than three feet if they are to be kept longer than three or four weeks.

Potatoes stored out of doors in pits also developed symptoms of blackheart, due to insufficient ventilation. Small outdoor pits are said to be fairly well ventilated, however, and it is not thought necessary to make any special provision for ventilating them. Large pits or storage cellars should have ventilators which extend down into the potatoes if the best results are to be obtained.

Potatoes affected with blackheart are low in vitality and sprout feebly, if at all. Severely affected tubers should not be used for seed, but those that are only slightly affected may be used, as the trouble is not transmitted through the seed.

## KEEP PLANTS VIGOROUS

A plant in vigorous health is almost immune to disease and partially so to attacks of insect pests. Agriculturists of all classes have noted that the weaker plants are first attacked or, what is more certain, insect pests multiply much faster on plants in poor health. Therefore good culture and care, a well balanced supply of food and drink, is the best insurance against the ordinary ills of field, orchard and garden.

Thirty-two agricultural club boys and girls from Willows and Orland were awarded trip to the university farm at Davis to attend convention held October 19-21.

Exide
BATTERIES

The Lights of a Great City

Exide BATTERIES SERVICE STATION

The nearest Exide Service Station has a battery the right size for your car. If your present battery needs repairs, no matter what make it is, it will be repaired skilfully and reasonably. If not in your telephone book, please write us for address.

Suddenly a black thunder-shower rolls up over the city. Although it is mid-afternoon, lights are switched on in thousands of offices until the towering city looks like an illuminated honeycomb. Huge Exide storage batteries, capable of delivering millions of candle-power, are called on to supply power through the emergency. More than ninety-five per cent of the central station batteries in America are Exides.

Exide Batteries are used in hundreds of ways—to drive the submarine beneath the waves; to supply the current for the vast network of telephone systems; to light trains; to propel mine locomotives and trucks. A large majority of all the farm light and power plants depend on the sure power of rugged Exide Batteries.

To get the full comfort out of your automobile and to run it with the greatest economy, buy an Exide when your present battery has to be replaced.

You will be amazed at how long the Exide lasts and how free you are from repair expense. The only real battery economy is to get the best one.

# Herbicide Kills Weeds Cheaply, Effectively

**Satisfaction Guaranteed**

Destroys, absolutely, all pest weeds, noxious grasses, vines, shrubs, including Johnson, Bermuda, Morning Glory, Crab, Nut, Bronco, Water Grasses, Malva, Thistle, and all other noxious plants.

Herbicide is a triumph of modern science. It is a combination of chemicals, which, when sprayed on the foliage, permeates the entire sap system of the plant, and kills it root, branch, seeds and all. Inasmuch as the seeds, also, are killed, your next season's crop of weeds will be lighter and eventually you will banish them entirely.

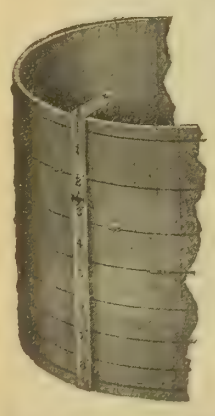
Herbicide is extremely economical and easy to use. Does not require a professional sprayer. Far cheaper and more effective than hand labor with a hoe. To save freight we ship in concentrated form—one gallon makes ten gallons of spray. This is one of the reasons why Herbicide is a more economical spray to use.

Herbicide is tried, tested, proven. It cannot fail to remove noxious weeds in the cheapest and most effective manner known. Now is the time to kill them. Enrich your land by removing worthless weeds which sap the soil.

Write for prices, today.

Herbicide Chemical Laboratories,
1963-C Santee St., Los Angeles, Cal.

# "If I were you"



said a prominent rancher to his neighbor, who was talking about buying some tanks and pipe, "I would send for the book of the Pacific Tank & Pipe Company. It has saved me lots of money and trouble. It will do the same for you. These people have made

**TANKS, PIPE AND SILOS**

for over 30 years, for use in every climate under all sorts of conditions.

"They will give you facts worth money to you. Just drop them a line telling them what you are in need of (whether tanks, pipe or silos) and they will give you conscientious, courteous information.

## FROST AND FUMIGATION; TEMPERATURE RECORDS FOR PROTECTION FROM FROST AND INSECT PESTS

(Continued from Page 467.)

vember (1918) and the latest winter frost in the second decade in April (1913). It may be some satisfaction to know that the last seven years have been notable for comparatively short growing seasons, and last year was the shortest season of which there is record; no other year approaches it in the matter of late spring and early autumn frosts. The average date of the first damaging frost in the citrus region of Southern California is approximately December 1, although the forehanded orchardist, a fortnight before this date, will clean up his oil pots, store his fuel oil and overhaul his temperature records and note the danger spots in his groves. No other form of crop insurance pays so well as preparedness in frost protection.

### Thermometers for Fumigators

For several years past the horticultural commissioners of many of the southern counties have seen the growing necessity of accurate temperature observations preceding fumigation of the citrus groves. Several instances occurred where serious loss mounting into millions of dollars was occasioned by unfavorable weather conditions which had been translated into favorable conditions by inaccurate and worthless thermometers. This led to an investigation into the kind of thermometers the fumigators ordinarily used in their work. It was found that cheap and poorly constructed thermometers were the rule and not the exception. To remedy this the horticultural commissioners of Los Angeles, Orange, San Bernardino and Riverside Counties incorporated into their regulations governing fumigators operating in their counties provisions that "The foreman of each fumigating crew shall be equipped with a thermometer properly tested within the range of 28 to 100 degrees," and "The United States bureau of standards, Washington, D. C., and the department of meteorology of the Los Angeles chamber of commerce, are properly equipped to test thermometers. The seal and certificate of either of these offices will be accepted. A nominal fee is charged for this service." The response of the fumigators was hearty, and the recommendations of the county horticultural commissioners were carried out with alacrity, so that within a few months after the suggestions as to thermometers were published practically all of the fumigators equipped themselves with dependable instruments. Heretofore temperature observations were merely guesswork so that there does not exist at present definite data as to the limits of temperature, either high or low, at which fumigation may be safely conducted. Now that dependable thermometers are being used to check up operations the close of the present season ought to solve in a general way at least many of the perplexing problems as to the influence of temperature on fumigation.

### Temperature Limits in Fumigating

From the information already obtained this season it would appear that temperatures at which it is safe to fumigate vary with the distance from the coast. This clearly indicates the necessity of considering the humidity as well as the temperature of the air. Data as to both temperature and humidity are obtained by the use of thermometers. The simplest and the most satisfactory method of observing the percentage of moisture in the air is by the use of a whirled psychrometer. This is an instrument comprising two accurate thermometers placed side by side. One of the thermometer bulbs is covered with muslin which is moistened with pure water and both instruments are rapidly whirled. The difference in reading between the wet and dry thermometers shows the evaporating power of the air, which, by the use of tables, is converted into percentages of relative humidity.

Experienced fumigators admit that it is not possible with the meager data at present available to set a definite maximum temperature limit for fumigation practice under which fumigation would be safe and beyond which injury would probably occur. Owing to the smaller amount of moisture in the air it is safe to fumigate in Riverside and San Bernardino Counties when the temperature is 85 degrees. In eastern Los Angeles County the temperature limit is 80 degrees, and in the citrus districts south of Los Angeles proper, and in Orange County fumigation with temperatures above 75 degrees is considered unsafe. It has been surmised that the tree is injured by high temperature when the air is dry because its individual resistance is then low. Neither is it possible to set a definite limit to minimum temperatures, but it is a generally observed practice for fumigators to refrain from fumigating when the temperature of the air is much below 50 degrees. Owing to the reduction in pressure in contact with outside air the liquid gas used in fumigating has been known to form ice on the weeds or foliage in close proximity to the spray nozzles and the diffusion of the gas is greatly retarded. One authority states: "The molecular activity of the gas is great and since the dosage for each tree is computed on a basis of maximum diffusion to be secured almost immediately after application any retardation such as might be caused by freezing of the gas would prevent proper diffusion. By the time the ice is vaporized the gas already formed has leaked out through the tent walls."

It is the general impression among entomologists, fumigators and field investigators, as well as orchard owners, that the time of hit or miss methods in the matter of protecting against insect pests has long since passed. The very existence of the citrus industry depends upon effective destruction of insect pests. Temperature and humidity are such important factors in combating these enemies that systematic observation and study of weather conditions in relation to fumigation is of considerable importance. Los Angeles County Horticultural Commissioner H. J. Ryan pertinently remarked: "Obviously when the actual danger point in fumigation is so much a matter of theory and conjecture (although based on actual experience) it is doubly important that accuracy in the matter of temperature readings be made as certain as possible."

## AVOCADO ASSOCIATION WILL MEET

The semi-annual meeting of the California Avocado Association will be held at St. Ann's Inn, Santa Ana, on Saturday, November 4. There will be a special display composed largely of the hardier thin skinned Mexican types, under direction of R. Agnes McNally of Altadena. Members or others having fruits available for the display are cordially requested to communicate with Miss McNally and to reserve fruits for this purpose.

At 11:00 A. M. Dr. J. Eliot Coit will discuss "How to Make the Avocado Tree Bear." The luncheon at 12 o'clock will include at least two avocado courses and be open to all interested in avocado growing. Reservations must be made prior to November 1. At 2 o'clock Dr. A. B. Stout of Pomona College will give an address on "Pollination to Make the Avocado Tree Bear." Then will come a talk on fertilization by K. A. Ryerson, assistant farm adviser of Los Angeles County.

Following these principal addresses will come five minute papers, on the same subject, "How to Make the Avocado Tree Bear," by C. V. Newman, Manager San Joaquin Fruit Co., Tustin; T. J. Walker, Orchardist, San Fernando; Dr. H. J. Webber, University of California; E. C. Dutton, orchardist, Anaheim; Robt. W. Hodgson, farm adviser, Los Angeles County; C. F. Kinman, U. S. Dept. of Agriculture.

## CERTIFIED SEED POTATO GROWERS WILL MEET

The certified seed potato growers of California will meet at Sacramento during the Fruit Growers and Farmers Convention, November 21-23.

The world production of cacao in 1921 was reported to be 431,000 short tons as compared with 407,000 short tons in 1920 and 280,000 short tons in 1913.

## FROST AND FIG TREES

(Continued from Page 469.)

injured. One peculiar effect of the frost injury was the exudation of small drops of sap upon the surface of the bark, giving it a rough, pimply appearance. Some of the least injured trees showed early signs of growth and soon pushed out vigorous buds. Hundreds and thousands, however, gave no evidence of recovery either in branches or trunk for weeks following the date of injury, April 4. Even as late as June 3 large numbers of trees were still leafless, and some of the growers cut them back to the trunk or even to the ground, hoping to force out a better crop of suckers. While there is a general belief that young fig trees are never killed by frost, many cases were found where roots as well as top succumbed to the injury.

### Sour Sap

The fig tree is not as a rule susceptible to the condition known as sour sap. A considerable number of trees, however, showed unmistakable signs of sour sap both in 1921 and 1922 as a result of stagnation of the sap following frost injury.

### Sunscald

The exposed bark on trunks and branches of both young and old trees is frequently found to be killed in the spring following cold winter weather. Such damage occurs on the south and southwest sides of trees and is due largely to the wider fluctuations in temperature and to more sudden falling of temperature after the sun's heat is withdrawn at sunset. Thermometers inserted underneath the bark on opposite sides of young tree trunks have shown temperatures on March 10 of 32 degrees Fahrenheit on the northeast side and 69 degrees on the southwest side at the same time. On another tree trunk records show a temperature of 92 degrees Fahrenheit on the southwest side on February 20 while the temperature on the northeast side was 35 degrees Fahrenheit. Rapid cooling of exposed bark after sundown in many cases in California to below the freezing point, seems to account for winter sunscald.

### Occurrence of Frost

A distinction should be made between a frost and a freeze. A freeze as distinguished from a frost is marked by the transference of large bodies of cold air from other regions or elevations and may be accompanied by wind; a frost is due to a local cooling of air and occurs during calm weather. Freezes are ordinarily the most destructive to plants and frequently strike foothill locations which are commonly considered less subject to frost injury than the open valleys. Thus, fig trees in some foothill districts suffered just as severely from the spring freeze of 1922 as trees in lowland plantings. As a general rule, however, foothill orchards are safer from frost injury than those in the valley.

Records of the earliest dates of killing frosts in the fall and of the latest in the spring are valuable data for growers and prospective planters to have for their own particular locality. For example, weather bureau records at Fresno show the following data: Average date last killing frost in spring, February 22. Latest date of last killing frost, April 14, 1890. Average date of first killing frost in autumn, December 2 Earliest date of first killing frost, October 31, 1919.

Orchardists are more concerned with extreme than with average temperatures. Extremely low temperatures, however, are of comparatively rare occurrence in proven fig districts; it is the frequency of such temperatures which limits the production of some of our fruits to certain districts. Each district is practically forced by experience to learn for itself whether the production of trees or fruit is so hazardous as to render the variety unprofitable or whether methods of frost protection will render its production possible in spite of frost.

### Factors Influencing Hardiness

Variety. It can be stated in a general way that the trees of practically all our commercial fig varieties are tender and more or less commonly subject to severe frost damage. The stage of maturity of the individual tree, its habit of growth and recuperative powers are undoubtedly of greater significance in this connection than is variety. In large plantings where all the commercial varieties of both edible and capri figs have been grown only minor differences in varietal hardiness have been noted. Young Mission trees seem to be particularly tender on account of their late maturity and the production of smaller succulent branches. The Adriatic tree produces short stubby branches which are more inclined to harden up early. Calimyrna and Kadota trees have suffered severe injury during the past two years and have shown no special characteristics of hardiness.

Individual trees here and there in fig orchards commonly escape frost injury while neighboring trees are killed to the ground. There is no direct evidence that this character of hardiness is inherent in such trees and not due to external environment.

### Maturity

The state of maturity of fig trees at the time of frost occurrence undoubtedly has a greater influence on the extent of the damage than any other factor. Succulence of growth invites severe frost injury. Maturity of foliage and buds is an insurance against injury.

### Soil Moisture

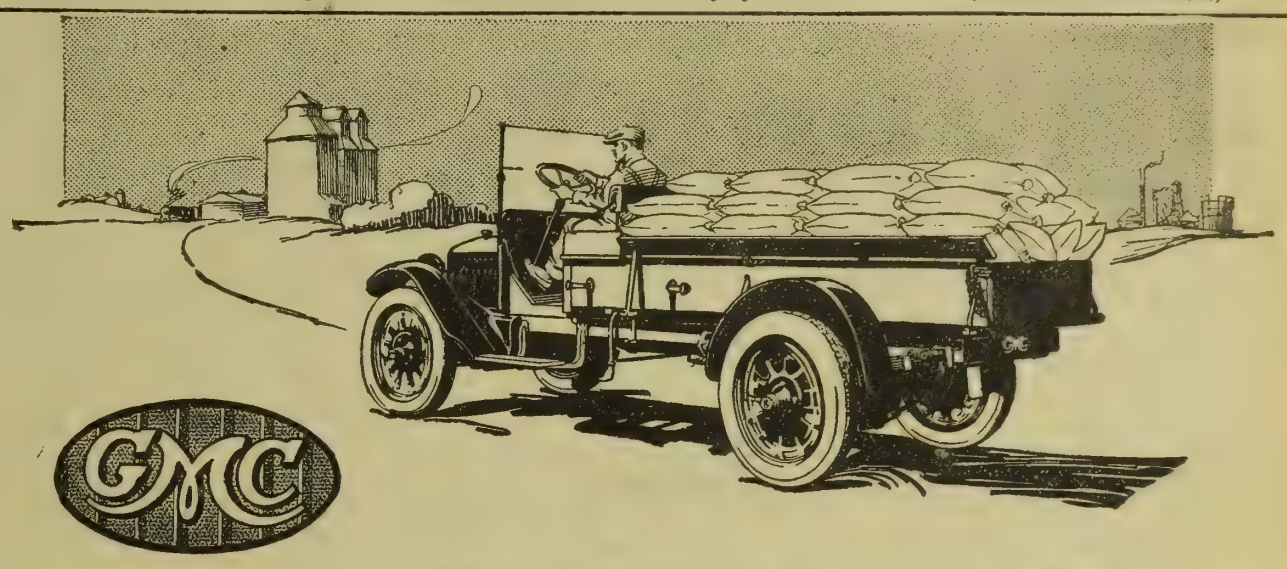
Soil moisture, more than any other one factor, influences fall maturity of fruit trees. An abundance of soil moisture, coupled with moderate temperatures, is favorable to continued growth of fig trees. In some foothill districts fig trees continue to grow until the middle of November and green leaves function for a month or six weeks later. A gradual reduction of soil moisture during the fall months, namely September and October, induces normal maturity. Insufficient moisture during the summer and fall months may cause premature dropping of the leaves, exposure of the branches to sunburn, and a general weakening of the entire tree. Such weakened trees are not only susceptible to severe winter injury but lack recuperative power if injury occurs.

### Vigor of Tree

Healthy trees, like healthy human beings, withstand disease better than weak individuals, and frost injury is a form of disease. Any soil or cultural condition which produces vigorous growth and healthy foliage should up to a certain limit, not only render the tree less susceptible to severe frost injury, but, what is probably more important, enable the tree to recuperate vigorously following such injury. As already pointed out, vigorous growth late in the season should be avoided especially with young fig trees.

Most young fig trees are naturally vigorous. For various reasons, bearing trees are often inclined to lose vigor and show signs of distress. The discovery of the causes of such distress should be the aim of every intelligent grower for it is a very evident fact that healthy Adriatic trees have suffered very slight frost damage during the past severe season in comparison with weak trees.

(Continued next week.)



GMC

# The Best Truck for the Farm

*A "Jim-Dandy" Truck*
**Model K-16, One Ton**
**$1295**
***Chassis only—at the factory***

For general farm use, on hard roads or in rough fields, the Model K-16 one ton GMC provides more pulling power, more speed, and more economy than other trucks of the same capacity.

Moreover, this "Jim-Dandy" truck is built from truck parts exclusively—no passenger car parts used. Consequently it has the sturdiness and enduring performance that is demanded for hauling over all kinds of roads and in all kinds of weather.

The exclusive features of GMC construction, developed from more than ten years of successful truck building, have provided this truck with more continuous performance and lower operating and maintenance costs. Due to its advanced design there is not a single wearing part in this truck that cannot be replaced. Such refinements as Removable Cylinder Walls, Removable Valve Lifter Assemblies, Pressure Lubrication, and Instantaneous Governor action all give to this truck the dependability that is so vital in farm trucking.

In every detail of construction the Model K-16 has been built according to the most approved and most advanced practices.

Magneto ignition, electric lights and starter with conduit wiring entirely separate from the ignition wiring, radius rods, thermo-syphon cooling, oversized brake drums, interchangeable brake rods, complete instrument board, pressure chassis lubrication, cord tires—

All these are universally accepted as the best for motor truck use—all these are standard in this GMC.

Measured by any standard this one ton truck has no superiors—and its cost, considering its quality, is much lower.

Write for an illustrated booklet, "Motor Trucks on the Farm."

***GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added***

R.F.D.

FREE! TRAPPERS

HERE'S something for YOU, Mr. Trapper and Fur Shipper—something very important to YOU. Prices of raw furs are high this season, so get all the furs you can, BUT to get the most money for your furs, *you must be accurately posted on market conditions and market prices.* Make this your biggest season by reading "The Shubert Shipper" regularly. It costs you nothing—it's FREE—and it will make you many dollars. What is "The Shubert Shipper"? It's the greatest publication of its kind in the world. It not only quotes highest authentic market prices on all articles of American Raw Furs, but also contains market information that you cannot afford to be without.

Write SHUBERT Today

WHAT will "The Shubert Shipper" do for you? It will make money for you. It will put you in position to sell your furs at the highest prices at all times—you will always know just what prices your furs should command. Isn't such information worth money to you? The market reports published in "The Shubert Shipper" are always based on true facts concerning conditions existing in all the fur markets of the world. It also contains pictures of fur-bearing animals in beautiful colors. What must you do to get "The Shubert Shipper" regularly? Just sign and mail the coupon below and a copy will come to you by next mail. *Don't be without it.*

# Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When queries are wished in Cultivator address query to 317 Central Ave., Los Angeles.

### Minor Child

A boy 19 years of age, who has for some time past made his own living, desires to know if his father can collect his wages and can forbid him from marrying?—Subscriber, Kelsey.

Until the boy is 21 years of age, in order for him to obtain a marriage license it will be necessary for him to present to the clerk the consent, in writing, of his parents. The father and mother of an unmarried minor child are equally entitled to its custody, services and earnings.

### Affixed to Land

Over a year ago a party who stayed with me set out a number of grape cuttings and installed a stationary pumping engine. Has this engine become a fixture so that it cannot be removed?—Subscriber, Woodlake.

When a person affixes his property to the land of another, without an agreement permitting him to remove it, the thing affixed, except in certain cases of tenancy, belongs to the owner of the land, unless he chooses to require party who affixed it to the land to remove it.

### Manufacturer Liable

I purchased an automobile from a dealer. A few days later, on account of a latent defect in the car, I met with a serious accident. Could the manufacturer of the car be held responsible?—Subscriber, Fresno.

One who sells an article of his own manufacture thereby warrants it to be free from any latent defect not disclosed to the buyer, arising from a process of manufacture and that neither he nor his agent in such manufacture has knowingly used improper materials therein. From the foregoing code section it appears that a breach of warranty has occurred and the manufacturer can be held responsible for damages therefore.

### Water Rights

An irrigation company which takes water from a certain large creek wishes to stop all farmers along this creek and subsidiary creeks from taking any water. Can this be done?—Subscriber, Elk Creek.

Presumably, the inquirer is a riparian proprietor and as such has a right to take water for use upon lands along the banks. This right, however, is limited by the corresponding obligation that such water be placed to a beneficial use and is further limited by the fact that a prior appropriation of the water may have been made. If the irrigation company made an appropriation of the waters prior to the time of your beneficial use, it might prevail. It would, however, necessitate an examination of the particular facts in order to definitely answer this. A method has been prepared by the state whereby these conflicting rights may be thoroughly investigated and determined. In order to invoke this method you should lay your complaint before the state water commission and undoubtedly a special investigator will be sent to ascertain all the facts and make the appropriate order.

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Bean Weevil

What should I do to save my bean crop from insects?—Subscriber, Napa.

Presumably our inquirer is asking as to protection against the weevil which infests beans after they are harvested and in storage. The best treatment for this has been found to be the gas of carbon bisulphide. Carbon bisulphide is a liquid which evaporates quickly when exposed to the air, forming a heavy and inflammable vapor of great penetrating power. In using the material for fumigation it is essential that it be placed at the top of the room in a shallow container in order that the heavy vapors as they are driven off will thoroughly diffuse through the air contained in the space to be fumigated. The proper amount to use depends upon the type of room being fumigated and ranges up to about 5 pounds to 1000 cubic feet in ordinary rooms where the walls and floor have not been made especially tight, even 10 pounds per 1000 for larger room or other than small, tight bin. Where possible 48 hours' exposure to gas should be secured. The best results are obtained by doing this work when the temperature is above 75 degrees Fahrenheit. Be sure and keep any light or fire away from this gas.

### Alfalfa in Orchard

Does it hurt young fruit trees to have alfalfa between and continually watered?—Subscriber, Burbank.

Many orchardists grow alfalfa between trees, and with trees set far apart so that strip of clean cultivated soil may be maintained next to trees such culture may be harmless and even beneficial. Care should be taken to keep the ground near trees from getting water-logged. Alfalfa, however should not require irrigation oftener than at intervals of 20 or 30 days. When the trees get older one good heavy crop of the alfalfa may be turned under by the use of sharp steel mold board plow. Of course it goes without saying that the manure made from alfalfa cuttings in the orchard should be returned to the soil.

### Feeding Goats

What is the best feed for milk goats?—Subscriber.

Alfalfa hay before the animals most of the time, with a half and half mixture of bran and rolled barley at milking time has been my goat's ration for two years and she has never had a sick day nor gone dry except when she was dried up before kidding. Another goat owner says that instead of bran and barley alone at milking time she made it one-third bran, one-third rolled barley and one-third dry beet pulp, and she never feeds more than a quart at a meal. Alfalfa, instead of being before the goats all the time, is fed three times a day, but they are given all they will clean up at one time. The salt cake is an important item in the ration of milk goats and fresh water should be before them at least three times a day.

### Pears on Apples

Will you kindly tell me if demonstrations have proven that pears can or cannot be successfully grafted (or budded) onto apples? Which would be preferable, budding or grafting? If yearling apples were to be grafted over to pears, which would be best, to cut entire head of tree off and insert one scion, or to put in several in the limbs?—Subscriber, Greenfield.

Apples and pears can be budded or

grafted on each other but we question the success of the operation from a commercial standpoint. For some reason there seems to be a lack of affinity between the two as repeated trials of working apples on pear root show unsatisfactory results both in growth and productiveness. In our opinion you would get much more satisfactory results by taking out your apple trees and planting pears grown on their own root. At first thought this would seem to be a waste of time as well as trees but it is better to do it now than to spend money experimenting and then after two or three years find that the experiment was a failure and the trees have to be pulled out after all. Grafting is the best method of working over deciduous trees and, in the case of your yearling apples, it would be best to cut off the entire top and insert the grafts in straight stock.

### Heifer Sucking Cow

To help your subscriber, Arroyo Grande, Page 345, September 30, '22, "Heifer Sucking Cow," I submit the enclosed description of halter that cured two cases for me. Use heavy strap halter with strap across forehead and strap around the nose. Nose strap a little large. Make a board three-eighths by two inches, long enough to extend from forehead strap to end of nose. In nose end put three or four sharp lath nails. Put board under forehead piece and nail. Nail lower end to nose strap outside. Fasten a pad under board half way to forehead strap to hold nails just off nose. As she attempts to suck nails will punish her.—J. F. Butterfields, Riverside.

### Red Spider

Can you give me a remedy, also preventive measures, for red spider on red raspberries?—Subscriber, Santa Cruz.

The best preventive of the destruction caused by red spider is sulphur. It is sometimes applied in the form of a wet spray by using the commercial lime-sulphur solution. Others prefer the dry dust application, sometimes in the form of pure sublimed sulphur, or hydrated lime one-quarter, sulphur three-quarters. Kaolin and other carriers are also used.

### Various Questions

I have heard figs would grow from slips. How is it done and what time of the year? When is the best time to transplant roses and blackberries? When should alfalfa be sowed for the best results?—Subscriber, Claremont.

Figs grow readily from ripe wood cuttings. The cuttings may be 10 or 12 inches long of fully ripened wood taken off when the tree is entirely dormant. Some granulate the lower end by tying the cuttings in bundles and burying bottom up so as to cover with four or five inches of sandy soil. This may be done in December or January, and after the granulation is completed the cuttings may be carefully placed in the nursery row and given water and cultivation for one year. Transplant roses and blackberries almost any time, but the best time is perhaps when entirely dormant. Seeding of alfalfa depends upon locality and frost conditions. At Claremont it is probable it would be all right to sow at once. This would probably give opportunity for a good start before possibility of frost injury. February or March seeding usually gives good results.

### Budding Figs

Please advise as to whether I can successfully bud or graft three year old Brunswick figs with Mission figs. When and how should work be done?—Subscriber, Petaluma.

Figs are very easily grafted and you should have no difficulty in working over. January or February are the best months to do this work. We believe the wedge or insert graft is the best. The limbs are sawed off the same as in any other method of grafting and a V shaped piece of wood cut out from the edge of the stock, taking care to have the edges perfectly smooth. The scion is then cut on one side into a wedge shape so that it will fit snugly into the notch in the stock. A little practice will soon enable a workman to cut these so that they will fit perfectly and good results will be accomplished. Of course it must always be borne in mind that the bark of the scion must join the bark of the stock or there can be no union. If the limbs are two or more inches in diameter where sawed off two or three scions should be inserted in each limb. After they are inserted they should be securely tied with strong string and all exposed parts covered with grafting wax. The scions should be from two year old wood and cut before they make new growth. Some prefer tip scions but this is not absolutely necessary. Do not fail to whitewash the trees in order to prevent sunburn. For more complete information on fig grafting see our article in the Cultivator of February 14, 1921, Page 646.

### Apricots and Alfalfa

What is best way to grow apricots and alfalfa together? I plan to make panels 30 feet wide and plant trees 25 by 30 but am afraid if I plant on borders they won't get enough water. If I plant alongside border would flooding water hurt the trees? Mayflower peaches also do well here, ripening early. The only objection to growing orchard here is the frost.—Subscriber, Daggett.

You would get better results to leave a four or six foot border on which to plant your trees and arrange to irrigate and cultivate the trees separately from your alfalfa. Your trees would not do well if planted where they would be flooded every time you irrigate your alfalfa. Frost will not hurt apricots or peaches provided it does not come after blooming time in the spring. Any of the nurserymen advertising in the Cultivator will be glad to advise you as to best varieties to plant in your locality.

### Dust Spray

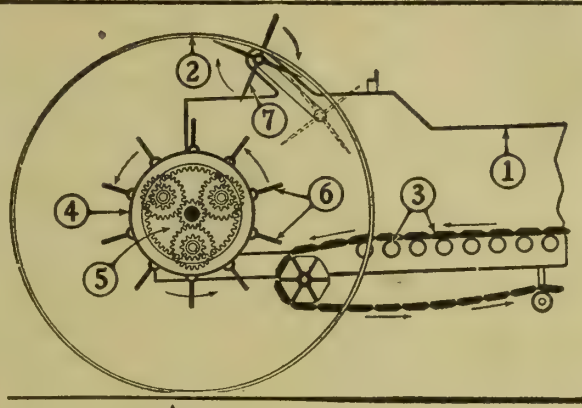
Can scales, San Jose and oyster shell, be successfully killed on apples and peaches with dust spray in place of lime-sulphur solution? Is salt added to this solution a benefit and how much salt to 50 gallons?—Subscriber, Petaluma.

We do not think that dust spraying will kill the scales in question. Salt has a tendency to make the spray adhere more closely to the tree and is thus supposed to add to its effectiveness. However, it is not considered of enough importance to justify the expense. About 12 pounds of salt to 50 gallons of solution is the amount used.

### Sugar Beet Lime

What is sugar beet lime?—Subscriber, Petaluma.

Sugar beet lime is ordinary lime used in process of extracting the syrup from beet pulp. It contains a small percentage of nitrogen, phosphoric



# The Seven Features That Have Made The John Deere the Leading Spreader

SEVEN JOHN DEERE ADVANTAGES

1. Only 36 inches to top of box—6 to 10 inches lower than beater-in-the-box type. In loading 100 loads of manure, this feature saves you in energy the equivalent to that of raising a ton of manure on the end of the pitchfork to the height of an 8- to 12-story building. The manure is in the box before the hard part of the lifting comes.
2. High drive wheels—4 to 8 inches higher than others. This advantage saves your horses. You know how much easier your horses pull a high-wheel wagon than a low-wheel truck.
3. Manure moves back to beater on apron mounted on 48 rollers. It is not dragged back. You know how much easier it is to move a ton weight on rollers than it is to drag it. This is another horse-saving feature.
4. Beater and important working parts are mounted on the axle. Beater is near the ground—manure is not thrown high in air—side winds do not cause drifting and uneven spreading. There is only one beater on the John Deere.
5. Simple beater drive gears are enclosed and operate in an oil bath—they last for many years. No chains or clutches on the John Deere, and only about half the parts used on others. No adjustments for you to make.
6. Beater teeth enter manure in a horizontal position. They do not work against the manure. Ten rows of teeth tear the manure apart and spread it evenly.
7. Revolving rake, another patented feature, has sharp-pointed teeth that penetrate deeply into the manure and revolve as the load moves back. This rake prevents bunching and decreases the draft.

Go into almost any agricultural section and you will find more John Deere spreaders on farms than any other make.

There are good reasons for this preference.

The John Deere spreader, the spreader with the beater on the axle, has many exclusive, money-making advantages.

The beater construction is patented—others cannot use it. This feature has made it possible to build a spreader that is easier on the user, easier on the horses, that is a real manure spreader, not merely an unloader, and an extremely simple spreader that gives extra years of real service at a lower cost for upkeep.

The illustration above points out seven of its exclusive features. To the left these points are briefly described. Study these. They are the real reasons why the John Deere leads in the spreader field—why it is the choice of thousands of farmers.

See this spreader at your John Deere dealer's. Look it over carefully. You will find many other superior points about it to further convince you that the John Deere is the most profitable spreader investment you can make.

**"SOIL FERTILIZERS"—A Valuable Book Free**

This book contains a world of interesting and valuable facts about manure, how and when to spread it. Gives results of a number of experiments. Tells about lime, green manures, etc. A book you will want. Free. Simply address John Deere, Moline, Ill., and ask for Booklet M46.

acid and potash derived from the beet pulp while it is being passed through the lime solution.

### Cutting Back Walnuts

When should I cut back walnuts that were set out late in March? When planted we were advised to cut back other fruit trees but leave the walnuts till fall. Was this right?—Subscriber, Lamanda Park.

Cut back your walnuts any time after they become dormant or have shed their foliage. The only pruning necessary on young trees is to cut out such limbs as are not needed to form a well shaped head.

### Cory and Burbank Thornless

I planted thornless blackberries last spring but do not know whether they are Cory or Burbank. Is there any way I can tell which variety they are? Is there any difference in care of the two?—Subscriber, Lamanda Park.

There is a very marked difference in the foliage of the Cory and Burbank thornless blackberries. The Burbank has a somewhat smaller leaf, more nearly smooth and only slightly notched on the edges whereas the Cory leaf is very heavily notched and the ribs more distinct, extending back to the base of the leaf. Also the Cory leaf is green on both sides while the Burbank is green on top and a silver gray, similar to an olive leaf, underneath. The Burbank variety requires very severe pruning. To get best results only the last season's canes should be left and these cut back to four feet and the laterals on same shortened in to one foot in length.

### Shipping Strawberry Plants

A friend in Terra Bella wants to send me strawberry plants but I have heard they can't be sent from one county to another. Please advise.—Subscriber, Lamanda Park.

We know of no quarantine being in effect on strawberry plants from Tulare County but they must be accompanied by an inspection certificate from the horticultural inspector of the district in which they are grown, showing them to be free from disease. Have your friend call up the local inspector and he will look over the plants and advise the necessary procedure for shipping them.

### Not Bees

Please tell me through Cultivator what the enclosed bees are. They bore into ground and I am told lay the eggs which hatch wireworms.—Subscriber, Anaheim.

The wasp like flies sent are of no economic importance and but very lightly touched upon by entomologists. They are in no wise related to wireworms.

### Planting Asparagus

When should asparagus be planted and how and when should rock salt be applied?—Subscriber, Claremont.

Planting may be done from December to April, but the first named month is preferable. The application of rock salt is not common and it is seldom used by commercial growers. Barnyard manure or cover crops are grown to provide humus before fields are planted. For fertilizer after planting nothing will produce better results than an annual autumn dressing of barnyard manure. A complete balanced fertilizer is usually applied to force the crop just as the first shoots appear. Nitrate of soda proves a splendid stimulus and should not be in less quantity than 500 pounds to the acre. Acid phosphate and muriate of potash are exceptionally beneficial to asparagus.

KROGH
Deep Well Turbines

Are built in all sizes ranging from the smallest which will go into a six inch diameter well up to the very largest size. We particularly call attention to our pump for 8 inch diameter well, which has about the same capacity as a three inch centrifugal pump and is an ideal pump for small farms. This particular size we build in large quantities and offer them at a very reasonable price. Pumps can be arranged for direct connection to motors or fitted for Belt drive. We also arrange these pumps for automatic operation in connection with combination pressure tank systems and irrigation from same installation.

### Growing Plants for Sale

How should I go about raising plants and seeds for market? Can you give me the name of a reliable firm that I could deal with? Do I have to get a license, if so, where?—Subscriber Oakdale.

No license is needed. Dealers like to see plants and seeds growing before they buy stock. You may supply plants without inspection, but no reliable dealer will take grower's word merely for anything about a seed supply. He must see the plants and fruits or vegetables while they are growing, perhaps several times, otherwise he does not know what he is buying therefore cannot conscientiously sell it with a guarantee. Consult your nearest large seed dealer and learn what he wishes to buy. He must be near enough to visit you occasionally until your reputation is established as a careful and intelligent seed grower.

### Borers in Sycamores

I have some young sycamore trees that are badly infested with white worms. The bark is split in places the splits full of white worms and the wood dies where they work. Is there anything I can do to save my trees?—Subscriber, Oakdale.

You do not say if worms are borers. If they are only just within bark and merely harbored in such hiding place they are easily killed. Saturate the area with crude oil, using a small brush. If they are borers, a common trouble in sycamores, there are two methods of dealing with them. You can find where they are working by the sawdust they turn out, or cut away with a sharp knife until run or bore is found. Then, with an oil can having a long slender spout squirt crude oil into the holes. A better way, used in local parks, is to carry small oil stove or lamp. Heat one end of a wire red hot and stick in bores or holes as far as it will go. This is the most effective and most economic means of dealing with the sycamore borer.

### Callas

What is the best time of the year to plant callas? How deep should the bulbs be planted?- Are they best out of doors or in house? How many bulbs should one bulb make in a season? Will a bulb be good for more than one season? What kind of soil is best for them? Is there a lily by the name of Kelloggi and where can I get it?—Subscriber, Modesto.

Very early spring is best for planting as foliage and flowers are injured by frost. Plant three to six inches deep according to size of bulbs. They grow best out of doors. Increase is entirely dependent on water and fertilizer supply; they require much of both Bulbs are good "forever," the largest and best for market are above five years old. Best soil is sandy loam and best climate is near coast. Flowers and foliage "burn" in interior valleys. Callas require cool climate and we would not advise attempt at commercial culture in your section of state The Kellogg lily is not commonly handled by dealers but may be obtained from Carl Purdy, Ukiah.

### Berries Not Bearing

My Himalaya blackberries set fruit but for two years fruit has failed to ripen. What effect does crude oil in the irrigation water have on the soil? Has any person or corporation the right to turn crude oil or sewage in a stream?—Subscriber, San Jose.

Without knowing your soil and treatment we can hardly answer your first question intelligently. Lack of water would perhaps be a factor but it may be lack of balance in fertilizing. An excess of nitrogen could cause such condition. Crude oil is very detrimental to all plant growth. No one has the right to turn oil, sewage or anything of that nature into any stream.

### Sulphate of Iron

Is sulphate of iron good fertilizer for peach trees?—Subscriber, Petaluma.

Sulphate of iron is a good fertilizer but should be balanced by other elements. Usually it is used in solution with nitrate of soda, to feed some plants, but even then needs superphosphate and sulphate of potash to make a complete plant food. Sulphate is not much used on plants except by experimenters. It is not present in commercial fertilizers.

### Ants in Rhubarb

Please tell me what will kill ants that destroy rhubarb. I have some guava bushes from which the outside bark is peeling off; what should be done with them?—Subscriber, El Cajon.

The government ant poison, so often recommended and formula printed in Cultivator is best for ants. We suspect however, that death of plants is due to root aphis on rhubarb. Look on roots for the ashy-gray woolly insects. Tobacco juice or dust or any nicotine solution is a good destroyer of these insects. Outer bark peels from guava trunks naturally, as it does from some species of eucalyptus. We do not think anything is wrong with plants.

### Coastal Fruit Trees

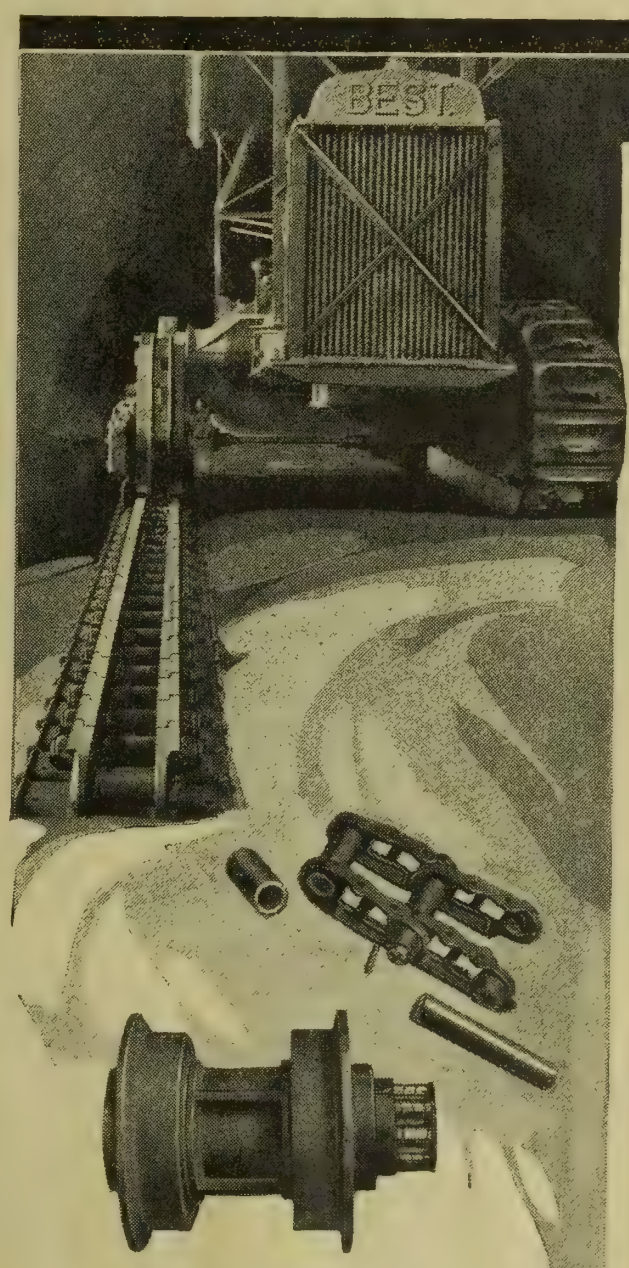
Is it advisable to plant a family orchard one mile back from Monterey Bay, behind windbreaks, and would you print a list of suitable trees? Soil is sandy. Also what gooseberry would do best in sandy bottom land?—Subscriber, Marina.

We see no reason why you should not be able to have a good family orchard but you must not expect that anyone can give you a prescription to exactly fit your case. Such sections have a climate that is peculiarly local. Find out from planted places within a range of ten miles up and down the coast what fruits have done well under soil and conditions similar to yours. That is the best guide. An experienced gooseberry grower says the Oregon Champion should be the best one for the south end of the state. Any nurseryman advertising in the Cultivator will gladly send you a catalog and mark those varieties of fruits usually shipped to your section of the state.

### Oranges in Florida

Can you let me know the approximate number of acres in Florida planted to late oranges, both bearing and nonbearing? I mean the varieties that correspond to our Valencias.—Subscriber, La Jolla.

We have no available information on the acreage of the different varieties of oranges growing in Florida. The United States census for 1920 gives the following figures on the orange production of Florida: Trees of bearing age, 3,645,811; nonbearing, 2,311,571; boxes harvested, 5,930,422. The Florida orange crop is practically all harvested before our Valencias are ready for market so even their late varieties do not come in competition with ours.



# Tracks that Last

OWNERS report that after two seasons' service the drop forged tracks on their Best Tractors have required practically no adjustment to take up slack resulting from wear. The construction of Best Tractor track parts is such that, when assembled, each section is in perfect alignment. The completed tracks are true and straight. There are tight seals to exclude dust and grit from working joints, which do not require lubrication.

## DETAILS

*The links* of the Best Tractor track are first forged, then accurately machined and hardened by heat treatment to resist wear.

*The track spools* are carbonized and hardened, cold drawn seamless tubing, machined outside and inside for close fit.

*The track pins* are carbonized and hardened steel. Size of pins in tracks of Best "Thirty" 1 5-16" diameter, 8" long; while those for the Best "Sixty" are 1 3-4" diameter and 11 3-8" long. These exceptionally large track parts give extremely low bearing pressures, practically eliminating wear.

*The steel shoes* are detachable, and may be had in widths and shapes most suitable for conditions to be met in your work. They are fastened to track links with four bolts to prevent any chance of becoming loose.

*Track Rollers*

The supporting track rollers are mounted on anti-friction bearings with seals to prevent entrance of ruinous grit.

Rims of rollers are of forged steel, heat treated to proper hardness and first accurately machined on their outer surface. These features give uniformly smooth action on the track rails and very much reduce friction and wear.

Investigate Best Tractors and you will find they have many other features which will appeal to you in addition to wear-resisting tracks. Catalog with complete details will be furnished on request to your nearest Best dealer.

# A Chocolate Sauce that covers everything

Here is a little kitchen idea that many housewives are discovering for themselves: Instead of stopping in the middle of meal-making to prepare some chocolate sauce, why not have a jar or two [home-made] within arm's reach on the pantry shelf? The recipe at the right will take only ten minutes to make. And—you'll have a supply of chocolate sauce that will save you *hours!*

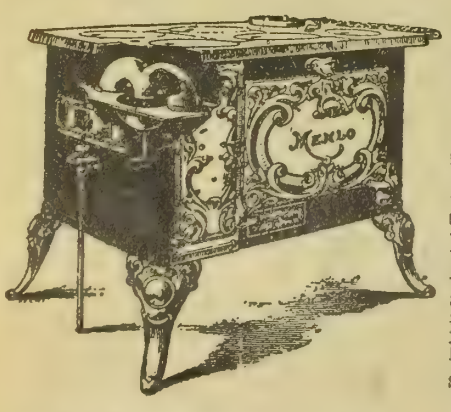
You know how a generous "spilling" of chocolate sauce will glorify a commonplace cup custard. And even a simple cornstarch pudding [or some cooked rice] topped off with this delicious sauce makes a fine, healthful dessert.

Since 1852 D. GHIRARDELLI CO. San Francisco

**How to make it:** Mix 1 cup sugar with 1 cup Ghirardelli's Ground Chocolate. Add ½ cup boiling water, ⅛ teaspoon salt, and cook 10 minutes or until thick. When cold add 1 teaspoon vanilla. Store in tightly covered jar. This makes 1 pint of chocolate sauce. Send for our recipe booklet.

GHIRARDELLI'S Ground CHOCOLATE

# Cheapest Heat You Can Buy



The Sievert Oil Burner burns either distillate or kerosene oil in cook stoves, heaters, furnaces, pasteurizers, boilers, prune dippers, dairy sterilizers, etc. Absolutely safe, odorless, very convenient and low priced. MAKES HEAT AT HALF WHAT WOOD and COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address

### "LET'S GO!"

"There isn't any business," wailed the sad and gloomy man;
"I haven't made a dollar since the armistice began."
But I couldn't help reflecting, as I heard his story through,
That the hopeful, cheerful hustler seems to have a lot to do.

I've been in business places where the air was thick with gloom,
And the men were sad and solemn like the mourners at a tomb,
And there wasn't any business or an order coming in—
And, there never will be till those fellows start to grin.

"There isn't any business"—aren't you weary of the cry?
Men have caught the gloomy habit; they sit around and sigh;
But the hustler, I have noticed, who has quit his easy chair,
And is confidently working, seems to gather in his share.

It is time to get the business, it is time to hustle out,
With a man's faith in the future—much too long we've scattered doubt,
Much too long we've sobbed and whimpered, much too long we've talked of woe,
Now it's time for optimism and the hopeful phrase:
"Let's Go!"

### CALIFORNIA DRIED FRUITS AND NUTS IN MANY APPETIZING COMBINATIONS

LAST week a subscriber requested recipes for different ways of using dried fruits and nuts, the recipes to be sent with Christmas packages. Here are some contributed in former years by Cultivator household readers which we consider the best ever:

#### Do Not Stew Dried Fruits

Save time, fuel and fruit flavor by the following method of preparation:

For fruits that have been sulphured as peaches, apricots, apples and pears wash thoroughly and let the last washing be on a sieve so that no particle of sand shall remain. Next cover the fruit with three or four times its own bulk of water, in which let it soak for at least 12 hours, or until it has reached the bulk which it had before drying. Now pour off and throw away the unabsorbed water and drain the fruit thoroughly on a colander, thus getting rid of most of the sulphur compounds and excess of acid. Meanwhile, prepare sufficient syrup of sugar and water to cover the fruit. Place the drained fruit in a dish and over it pour this bubbling, boiling hot syrup. Let stand till cold and it is ready for the table.

The amount of sugar used in the syrup must necessarily vary with the acidity of the fruit and the taste of the consumer. For apricots two parts of sugar to one of water is usually satisfactory. If a very rich syrup is used you will have preserves.

For making pies and puddings the drained fruit is used precisely as if it were fresh fruit. No stewing is necessary.

For such fruits as raisins and prunes, which have not been sulphured, it is not necessary to discard the water in which they have been soaked It may preferably be used in preparing the boiling syrup to pour over the fruit.

#### Walnut-Fruit Butter

Grind one teacup of walnut kernels fine and follow by one soda cracker. Mash one cup of pulp of dried fruit prepared as above for the table and mix thoroughly with the ground walnuts and cracker. If not sufficiently moist add a little of the syrup until the mixture has the consistency of jam. This is particularly fine when made of apples, raisins, figs or prunes. Sandwiches filled with this are fine for the school or picnic lunch. Fresh fruits may be used when in season, in which case sugar must be added to suit the taste.

#### Dried Peach Butter

Stew dried peaches, thoroughly mash and put through sieve. Add one-third as much sugar as fruit. Add spices to taste.—Mrs. C. W. Opple, Orosi.

#### Mock Cherry Pie

Where fresh fruits of all kinds are so plentiful and easily obtainable as in Southern California dried fruits are sometimes overlooked. There are many ways of using these, either alone or in combination, that give variety and add to the healthfulness of the diet. All dried fruits require soaking and very slow careful cooking. A little salt added while cooking serves to restore original flavor. Prunes may be soaked and cooked very slowly then sweetened slightly. To many tastes they are sufficiently sweet. Then add whipped cream and you have a fine dessert.

One cup cranberries, one cup sugar, half cup seeded raisins, chopped, a little water. Bake in deep pie pan.—Mrs George F. Herrick Riverside.

#### Dried Peach Pie

Cook dried peaches until tender, chop fine, sweeten to taste, add a teaspoon of nutmeg to each pie. Bake with strips across top instead of upper crust.—Mrs. J. W. Brown, Goshen.

#### Dried Apple Cake

Soak two cups of dried apples over night. Drain and chop fine and boil two hours in three cups of molasses. Let the mixture cool, then add two cups of seeded raisins, cloves, cinnamon and allspice to taste. Mix with cake batter made of one and a half cup brown sugar, one-half cup of melted butter, four eggs, four and a half cups of flour, two and one-half teaspoons of soda and bake.—Miss Mary J. Harvey, Santa Rosa.

#### Prune Whip

Stew 24 prunes until soft, let cool, mince very fine, beat the whites of six eggs until very dry, as you would for angel food; then add six tablespoons of powdered sugar. Now stir in very carefully the minced prunes. Bake 45 minutes in a pudding dish set in a pan of hot water. Serve with whipped cream.—Mrs. F. O. Roberts, Kerman.

#### Prune Whip

One-third cup prunes, whites of five eggs, half cup sugar, half teaspoon lemon juice. Pick over and wash prunes, then soak several hours in cold water or until soft. Remove stones and rub prunes through a sieve. Add sugar and cook five minutes. The mixture should be of the consistency of marmalade. Beat the whites of eggs until stiff, add prune mixture gradually. When cool add lemon juice and pile lightly on a buttered pudding dish. Bake 20 minutes in a slow oven. Serve with boiled custard sauce or whipped cream.—Mrs. E. J. Pearson, El Centro.

#### Dried Apricots with Dumplings

Select about 30 halves of dried apricots, wash well and soak in cold water. When soaked so as to look quite like the fresh fruit cover well with water and add sugar and cinnamon to suit taste. Put on to cook and when boiling well drop in dumplings made of one coffee cup of flour, one heaping teaspoon of baking powder, pinch of salt and enough milk to make thick enough to drop nicely from the spoon. Cover and boil about 20 minutes but be very careful they do not scorch. Serve warm with cream or a sauce made of whole milk, sugar and spice. This recipe will serve six people. A favorite with farm hands.—Mrs. B. B. Barnes, Laton.

#### Dried Peach Shortcake

Pour boiling water over one pound (or less) dried peaches; allow to stand a few minutes, then the skins will slip off easily. Boil peaches with one cup of sugar, and water to cover, until tender, then mash. They should not be too juicy. Make a rich biscuit dough. Roll out in two equal parts to fit an oblong dripping pan. Put in one layer (one-half inch thick) grease top, place second layer on first, bake. When ready to serve, remove shortcake from pan, lift off top layer, butter, spread peaches between layers and on top. Cut in squares and serve with whipped cream, plain sweet cream, or a sauce made as follows:

One and one-half cups brown sugar, one tablespoon corn starch, add two cups boiling water, one-half tea-

## The Cultivator Patterns

**4108-4049. Ladies' Costume.**—Blouse 4108 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4049 cut in 7 sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make this model for a medium size requires 6 yards of 40 inch matrial, with 1⅛ yards of 18 inch material to face the cascades. The width of the skirt at the foot without over lapping portion is 2⅛ yards. TWO separate patterns, 10c FOR EACH pattern.

**4105. Girls' Coat.**—Cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 3¾ yards of 44 inch matrial. Price 10c.

**4129. Ladies' Negligee.**—Cut in 4 sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 6¼ yards of 27 inch material. Price 10 cents.

**4133. Child's "Play Dress."**—Cut in 4 sizes: 2, 4, 6 and 8 years. A 6 year size requires 3¼ yards of 36 inch material. Price 10 cents.

**4121. Ladies' Dress.**—Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The guimpe will require 2⅝ yards of 36 inch material and the dress 3¾ yards for a 38 inch size. If the guimpe is made with short sleeves it will require 1⅞ yards material. To make the guimpe and dress of one material requires 6⅛ yards 36 inches wide. The width of the skirt at the foot is 2⅝ yards. Price 10c.

**4115. Girls' Dress.**—Cut in 4 sizes: 8, 10, 12 and 14 years. A 10 year size requires 2¾ yards of 32 inch material. Price 10c.

**4131. Ladies' Two Piece Undergarment.**—Cut in 4 sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A 38 inch size requires 1⅝ yards of 36 inch material for the Drawers and 1⅝ yards for the Chemise. Price 10c.

**3711. Boy's Suit.**—Cut in 4 sizes: 3, 4, 5 and 6 years. A 6 year size requires 3⅜ yards of 27 inch material. If made as illustrated trousers and collar will require 1⅞ yards of material and blouse 1½ yard. Price 10c.

**PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH**

**HOW TO ORDER PATTERNS**

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very best **NEW YORK** styles, all patterns ordered are filled in **NEW YORK**. Do not expect patterns under **Two Weeks** from date of order.

**PATTERN DEPARTMENT**
**California Cultivator** **Los Angeles**

spoon cinnamon, and a little allspice, cloves and nutmeg. Cook until slightly thick. This makes a very substantial dessert.—Mrs. O. H. Payne, Goshen.

### Prune Shortcake

Remove pits from stewed prunes and mash smooth. Sweeten and flavor with allspice. Bake two layers of shortcake. When cool spread the prunes between the layers and on top. Top with frosting. Do not spread the prunes on until time to serve.—Mrs. B. W. Hays, Patterson.

### California Raisin Pie

To one pound of seedless raisins add one half cup sugar and one pint water. Stew until done. Add strained juice of two lemons and two beaten eggs. Thicken with dry bread crumbs. Bake with one crust. When done cover with whipped cream or meringue.—Mrs. Clara Brons, Fresno.

### Delicious Filled Cookies

Two cups sugar, one cup shortening, one cup milk, two eggs, seven cups flour, four level teaspoons baking powder. Flavor to taste. Roll thin, put a tablespoon of filling on one cooky, place another on top and lightly press edges together.

Filling: Two cups chopped raisins, two cups chopped walnuts, two cups sugar, four level tablespoons flour, two cups boiling water. Let come to a boil, add juice of a lemon, cool and spread.—Mrs. Annie Martin, Campbell.

### Fruit Rolls

Two cups flour, two teaspoons baking powder, half teaspoon salt, sifted together. Add two tablespoons butter and two-thirds cup milk. Knead well and roll to quarter inch thickness. Brush with melted butter and sprinkle with sugar and cinnamon, half cup raisins and two tablespoons citron chopped fine. Roll like a jelly roll and cut into pieces about three inches long and bake in a hot oven about 20 minutes.—Mrs. C. A. Jenks, Hanford.

### Raisin Fritters

One cup of yeast or bread sponge, half cup warm milk, salt to taste, three eggs. Beat all together and add flour to make a thick batter. When light add one cup seeded or seedless raisins. Let rise again and fry in hot lard, using a tablespoon to take the batter up with and cutting or scraping it with a knife to give a smooth oblong shape (the fritters should be about the size of an egg when done). Serve warm. Those left over may be heated in the oven and rolled in powdered sugar, but we tthink they are good enough without it.—Mrs. A. J. Regier, Wasco.

### Stuffed Spare Ribs

Place one side or one-half the desired amount of spare ribs in a baking pan hollow side up and fill center with a mixture of three cups of dried apples and one cup of raisins, soaked and cooked soft, then drained. Lay the other half of ribs, hollow side down, over this. Sprinkle salt and pepper to taste over top, put enough water in pan to keep from burning and bake in a rather hot oven about one hour or until done, according to thickness of meat.—Mrs. A. H. Stockdale, Pasadena.

### Jellied Prune Ring

Soak one-third of a pound of prunes over night in cold water. In the morning simmer slowly until soft, stone them and cut in pieces. To the prune juice add enough boiling water to make two cups of liquid. Pour it over two and one-half tablespoons of gelatine dissolved in a half cup of water, then add one cup of sugar and four tablespoons of lemon juice. Strain, add the cut prunes and pour in a ring mould. Turn out when thoroughly chilled, fill the center with whipped cream sweetened and flavored with vanilla. Garnish the base of the dish with well plumped cooked prunes and whipped cream squeezed through a pastry tube.—Mrs. D. D. Dettweiler, Alta Loma.

### Prune Roll

Prepare a good biscuit dough, using, say, two cups of flour to four level teaspoons of baking powder, a pinch of salt and a teaspoon of sugar. Sift these together, then with the finger tips work in about one-third cup of

# It's a main highway

THE way to satisfaction, comfort and health through Postum, has become a world-wide way.

This famous table beverage which has stood the test of twenty-five years, fills every requirement of taste for a hot and invigorating mealtime drink. Unlike coffee or tea, Postum contains nothing that can irritate nerves or disturb digestion. Even the children may safely enjoy it.

Wouldn't it be well for you to avoid the harm which so many have found in coffee and tea, and protect health while pleasing taste, with wholesome, satisfying Postum?

Order from your grocer today!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes. The two forms are equally delicious; and the cost is only about ¼c per cup.

# Use this Lamp 10 Evenings in Your Own Home

## Write Today for Special "10-Day Visit" Plan

This liberal plan puts the famous Coleman Quick-Lite Lamp on your table where you and yours can enjoy the wonderful light it gives—300 candle power of pure-white brilliance—20 times brighter than an old-style oil lamp.

Also, you can see how easy the Quick-Lite is to keep clean. No wicks to trim, no chimneys to wash, no daily filling necessary; and what a real money-saver the Quick-Lite is—cost to use, less than 2c a night; and how safe it is—can't spill fuel even if tipped over. Is listed as standard by The Underwriters' Laboratories.

**Write at Once:** Get full particulars about this Special "10-Day Visit" Plan. More than a million homes now enjoy this *better* light. Send now—a post card will do. Mention your dealer's name. Address Los Angeles, CA79.

Canadian Factory: Toronto

**Coleman Quick-Lite**
*"The Sunshine of the Night"*

shortening. Add sufficient milk to make a dough that will roll nicely. Roll about one-half inch thick and spread with pitted, stewed prunes, then roll up, the same as for jelly roll, moisten edges and press together. Place in baking pan and pour around it some of the juice from the stewed prunes, sprinkling over a little sugar, and bake until brown and well done through. Serve with whipped or thick cream.

### Date Pies

One cup sugar, half cup butter, quarter cup milk, yolks of three eggs, one cup of dates (seeded, ground and cooked), three-quarters of cup of English walnuts, one teaspoon vanilla. Make rich pie crust, line gem pans, put two tablespoons of filling in each crust. Bake until crust is light brown. Cover top with meringue of whites of three eggs well beaten and cup of sugar and vanilla.—Mrs. C. N. Ellis, Indio.

### Date Pudding

One cup chopped dates, one cup English walnut meats, one cup sugar, two eggs, four tablespoons cracker crumbs, three tablespoons milk, one teaspoon baking powder. Mix all thoroughly. Steam one and one-half hours. Serve with whipped cream or ice cream.

### Date Salad

Steam dates over boiling water a very few minutes. Remove seeds and place in each a walnut kernel. Put on ice and chill thoroughly before serving. When ready to serve place dates on very crisp lettuce leaves and pour good salad dressing over all. This combination is delicious.—Mrs. C. B. Lewis, Thermal.

### Date Pies or Tarts

One cup of sugar, half cup of butter, third cup of milk, one cup of seeded dates, three-quarters of cup of English walnuts, ground, yolks of three eggs, one teaspoon of vanilla. Grind the dates and cook in a little water until tender and almost dry. Mix sugar and butter well togeher, add yolks of eggs, milk, dates, walnuts and flavoring. Line gem pans with rich pie crust, place a tablespoon of filling in each gem pan and bake. Cover each pie with meringue, place in oven and brown.

Meringue—Three egg whites well beaten, one cup of pulverized sugar, flavoring to taste.

### Date and Nut Loaf

One pound dates (after stoning), one pound walnut meats, one cup flour, one cup sugar, half teaspoon salt, two rounding teaspoons baking powder, four eggs (yolks and white beaten separately), one teaspoon vanilla.

Mix salt and baking powder with the flour, add to dates and walnuts, add sugar and mix thoroughly again, add egg yolks then fold in the whites and add the vanilla. Pack into a loaf tin lined with buttered paper and bake in a slow oven one hour. This cake wrapped in paraffin paper will keep indefinitely and improve with age.

### Date Tapioca

One-half cup tapioca, one cup sugar, three oranges, one lemon, one pound dates.

Stir tapioca into three cups of boiling water and cook in a double boiler until clear. Mince dates, add sugar and mix with the pulp of the oranges and the juice and grated rind of the lemon. Put layer of tapioca in well buttered baking dish, then the fruit mixture. Cover with the remainder of tapioca and bake half an hour. Cover with meringue and brown delicately. Serve perfectly cold with cream.

### Mocha and Date Cake

One cup of sugar, half cup of strong coffee, half cup of dates, chopped fine, half cup of walnuts, chopped fine, two eggs, one and three-quarters cups of flour, one-third cup of softened butter, one and one-quarter teaspoons baking powder, one teaspoon vanilla.

Beat sugar and egg yolks together eight minutes, add butter then other ingredients, beaten whites last.

Filling—One-third cup butter, one and one-third cups powdered sugar, one teaspoon grated chocolate and vanilla to taste. Add strong hot coffee, drop by drop until right consistency to spread on cake. Beat hard.—Mrs. Bruce Drummond, Indio.

### Fruit Bread

Three pounds dried prunes, 1 pound dried pears, ½ pound dried figs, 1 pound raisins, ½ pound citron, 1 pound currants, 1 pound nuts, ½ cup shortening, 2 yeast cakes, 1 teaspoon cinnamon. Cook prunes and pears, drain off the juice, put through the chopper with the citron and figs, put back in kettle, add raisins, currants, nuts and cinnamon. Make a sponge as for bread; let it rise, mix dough with juice, add the warm fruit, salt and shortening and flour to make a stiff dough, let it rise, put in pans, let rise again and bake about 1 hour in a moderate oven. Do not let it chill.

### Loaf Candy

Three pints white sugar, one and one-half pints cream, one pint light colored syrup, one quart nuts, one teaspoon vanilla. Cook until it forms a soft ball when tried in cold water. Take off of fire and beat hard until it begins to get cold, then pour the nuts in and beat together. Pour into a deep pan so it will make a loaf. You will find this is a delicious candy and will keep for months.—Mrs. J. H. Paul, Eagle Rock.

### California Pralines, a Southland Dainty

One pound brown sugar, water to dissolve. Boil till nearly brittle, then add one cup of cream, let boil up again and add juice of one orange, boil again and add one tablespoon of butter. Beat like caramels and pour over one pound of English walnut meats and grated rind from the orange. Beat to a cream, then drop small pieces on greased pans to harden. Glucose or corn syrup may be used with the sugar to insure smoothness.—Mrs. E. Carrithers, Laguna Beach.

### Turkish Delight

One ounce gelatine, one-half cup cold water, two cups granulated sugar, one-half cup boiling water, grated rind of one orange, juice of one orange, juice of one lemon, one-half cup chopped nuts, fruit coloring if desired.

Add cold water to gelatine, let stand until dissolved. If sheet gelatine is used break in pieces before adding cold water. Put sugar and boiling water in saucepan, bring to boiling point, add gelatine and let simmer 20 minutes. Add coloring if desired. Strain, add nut meats and turn into pan rinsed in cold water. Let stand until cold, remove to board, cut in cubes and roll in powdered sugar.—Josephine Herrick, Colton.

### California Creams

Three cups white sugar, one and one-half cups water, one cup walnut meats, lump butter size of walnut, one teaspoon vanilla flavoring. Put sugar in a pan over a slow fire, let it melt and brown a light brown. Watch closely as it must not burn. Add the water and butter. Boil this, without stirring, to the soft ball stage, remove and stir until thick and creamy, adding nuts and flavoring. Turn into a platter and mark into blocks.—Mrs. S. D. Teel, Santa Ana.

### Delicious White Nut Candy

Two cups granulated sugar, two cups of milk, one-half cup butter, three-fourths cup chopped English walnut meats, one-half cup chopped figs, one tablespoon vanilla or almond extract. Put the milk, butter and sugar into a saucepan by the side of the fire until the sugar is nearly dissolved. Then boil until the syrup forms a hard ball when tested in cold water, or 250 degrees by a candy thermometer, then take the pan from the fire, add the chopped nuts, figs and extract and beat until the mixture begins to get sugary. Pour at once into buttered tins. Mark into squares with a knife, and when cold break into pieces.—Anna Moss Keyes, Lakeside.

### Walnut and Date Loaf

Three-fourths cup of water, two cups of sugar, one-fourth teaspoon of cream of tartar, vanilla.

Directions: Put the sugar, cream of tartar and water in a saucepan and stir thoroughly. Then boil the mixture without stirring until it forms a soft ball in water. Remove from fire and pour in a wet bowl and let stand until nearly cool, then beat with a spoon to a soft creamy mass, knead with the hands until it is soft and smooth and mix in the vanilla. Have cut up in small pieces a cup of walnut meats and dates mixed, and knead into this fondant. Then cut into slices.—Mabel Peterkin, Orange.

### Boston Loaf Candy

Three and one-half cups sugar, one and one-half cups milk, one cup corn syrup. Boil until it forms a lump in cold water—not quite so hard as for taffy. Take from fire and beat until it begins to stiffen. Add nuts, cocoa or coconut or simply pour into buttered tin. Cut into squares when cold.—Mrs. Charles Catlin, Saticoy.

### Fruit Paste

One cup dried figs, one cup raisins, one cup dates, one cup walnuts. Put each ingredient through a meat grinder three times. Mix all thoroughly, knead with the hands and roll out an inch thick. Cut into cubes. These may be dipped into chocolate if one prefers. This fruit paste has the advantage of being not only a delicious candy but a wholesome food as well.—Caroline C. Condit, Berkeley.

### Fruit Fudge—Chocolate Dipped

One and one-half cups granulated sugar, one cup maple syrup, one and one-half cups pure corn syrup, one-half cup thick cream or one-third cup milk and one-fourth cup butter, one cup of fruit—figs, candied cherries and apricots—cut in small pieces, one-half cake sweet chocolate for dipping.

Stir sugar, maple syrup, corn syrup and cream until sugar is melted, cover and let boil three or four minutes, then uncover and let boil, stirring occasionally, until when tested in cold water a soft ball will form. Remove from fire to cool. Then add the fruit and beat until it becomes thick. Pour into pans lined with waxed paper. In

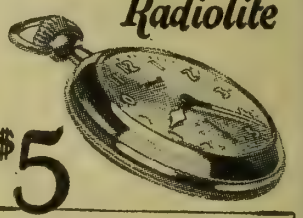
Ingersoll

WATERBURY
Radiolite



$5

THE WATERBURY Radiolite, like the famous Ingersoll Yankee, leads in its field. It is the best watch that $5 will buy—a *jeweled* watch that combines stamina and style. It is the small, popular 12-size, and graceful from antique bow to fine, open face that glows in the dark. A "silver" dial harmonizes with the polished solid nickel case.

Here is a watch with a sturdy 4-jeweled movement of modified bridge construction, built to combine enduring accuracy with lasting good looks.

Ingersoll Yankee $1.50

This is the reasonable, reliable, famous American Watch—the best known time-piece in the world.

about 15 minutes cut into squares and dip these in melted sweet chocolate.—A. Butcher, Healdsburg.

**Maple Panoche**

Grate one pound of maple sugar, add one cup milk. Stir over the fire until the sugar is dissolved and then boil until the syrup forms a soft ball when dropped in cold water. Take from fire, stir for a moment until it begins to thicken, then add hastily half pint pecan meats and turn the mixture into a square greased tin. When partly cold mark into small squares with greased knife.—Jesssie G. Storer, Beaumont.

**Date Pudding**

One cup chopped dry dates, 1 cup chopped nuts, 1 cup sugar (scant), 3 eggs (well beaten), 1 teaspoon baking powder, 9 level tablespoons flour. Bake in shallow tins about 20 minutes in slow oven. Serve with whipped cream. Will serve about eight. The dates and nuts should be chopped fine but not ground.—Mrs. J. H. Yetter, Los Angeles.

# New Lamp Burns 94% Air

## Beats Electric or Gas

**A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).**

**The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.**

## HOUSEHOLD QUERIES

**When You and I Were Young Maggie**

Would you please print in the Cultivator the words of Sweet Maggie.. A line goes like this—"Let us sing of the days of old Maggie, when you and I were young."—Subscriber, Fowler.

WHEN YOU AND I WERE YOUNG, MAGGIE

I wandered today to the hill, Maggie,
To watch the scene below,
The creek and the creaking old mill, Maggie,
As we used to, long ago,
The green grove is gone from the hill, Maggie,
Where first the daisies sprung;
The creaking old mill is still, Maggie,
Since you and I were young.

CHORUS

And now we are aged and gray, Maggie,
And the trials of life nearly done;
Let us sing of the days that are gone, Maggie,
When you and I were young.

A city so silent and lone, Maggie,
Where the young and gay and the best,
In polished white mansions of stone, Maggie,
Have each found a place of rest,
Is built where the birds used to sing, Maggie,
And join in the songs that we sung,
For we sang as gay as they, Maggie,
When you and I were young.

They say I am feeble with age, Maggie,
My steps are less sprightly than then
My face is a well written page Maggie,
But time alone was the pen.
They say we are aged and gray, Maggie,
As sprays by the white breakers flung;
But to me you're as fair as you were, Maggie,
When you and I were young.

## AMERICAN WIVES OF ALIENS STILL AMERICAN CITIZENS

Under provisions of the new alien naturalization law Americans who marry aliens will not lose their citizenship even though their husbands do not become naturalized. County clerks and federal naturalization officers have recently been informed of the new law which is now in effect.

Some of the essential features of the act of September 22, 1922, regarding the citizenship of American women are:

1. An alien woman marrying an American citizen after the passage of the above act, or any woman whose husband is naturalized after said act, may become naturalized by filing the usual petition of naturalization and complying with all the requirements of the naturalization laws, with the following exceptions: (a) No Declaration of Intention is required. (b) Only one year's continuous residence in the United States, Hawaii, Alaska or Porto Rico, immediately preceding the filing of her petition is required.

2. Any woman who before the passage of the above act, on September 22, 1922, was an American citizen and lost her United States citizenship by marriage to an alien, may become naturalized by filing the usual petition for naturalization and complying with all the requirements of the naturalization laws, with the following exceptions: (a) and (b) as in paragraph 1; (c) no Certificate of Arrival required, if during the continuance of the marital relations she shall have resided within the United States.

The act further provides that no married woman whose husband is not eligible to citizenship shall be naturalized during the continuance of the marital status, and that she, herself, must be eligible to citizenship.

The act further provides that a woman citizen of the United States shall not cease to be a citizen by reason of her marriage to an alien after September 22, 1922, unless she make formal renunciation of her citizenship before a court having jurisdiction over naturalization of aliens, but that any woman citizen who marries an alien ineligible to citizenship shall cease to be a citizen of the United States.

The act also provides that an alien woman married to an alien at the time of the passage of the act on September 22, 1922, or who may thereafter marry an alien, may become naturalized by complying with all the requirements of the naturalization laws.

The status of single women is not affected by this law, and women of this class may continue as in the past to file declarations of intention and petitions, for the purpose of becoming naturalized.

## KEENLY APPRECIATED

Convalescent (to a thoughtful friend): "Thanks very much for the brandy peaches. Although the doctor wouldn't let me eat the peaches I enjoyed very much the spirit in which they were sent."

## SUPREMELY HONORABLE

There is nothing more honorable in this world or the next than simple toil. It must be remembered also that the laborerer is worthy of his hire and that the employer is worthy of efficiency on the part of the worker.

## HOPELESS

The manager of a factory asked the foreman if the new man he had hired was making progress. "Progress!" exclaimed the foreman, disgustedly. "Progress! I've taught him everything I know and he is still an ignorant fool." —Boston Transcript.

## YOU BET HE DOES

"You bet I believe in heredity. Why, I have three of the smartest kids you ever saw."

## A PREFERENCE

I'd rather have a real woe
Than care imaginary,
For I can lay a real one low
If I am wise and wary,
But troubles of the fancy, they're
The meanest of the ghoulish,
For when you strike you hit the air—
A process truly foolish. — John Kendrick Bangs.

## GET A HUSTLE ON!

Don't wait for prosperity to return,
That's not the way to greet her;
Get on your seven-league boots, old boy,
And hustle out to meet her.

## CATALOGUE NOTICE

Send 12c in silver or stamps for our Up-To-Date Spring & Summer 1922 Catalogue, containing over 500 designs of Ladies, Misses and Children's Patterns, a Concise and Comprehensive Article on Dressmaking, also Some Points for the Needle (illustrating 30 of the various, simple stitches) all valuable to the home dressmaker.

# Buying 100 Purebred Bulls in 30 Days

By C. L. Hughes

BEFORE noon on Saturday, October 14, A. F. Berri, a Marin County dairyman, signed an agreement to buy a purebred registered dairy bull to replace his grade bull, making the 100th such agreement to be signed in Sonoma and Marin Counties within 30 days, and reaching the original goal set for the Sonoma-Marin purebred dairy bull project.

This project was initiated by the dairymen of the two counties through their respective farm bureaus and was placed in charge of Noel Negley, the recently appointed dairy specialist of California agricultural college, who carried out the plan with the cooperation of the two farm bureaus, practically all of the banks, business organizations, schools, and even churches of the two counties.

The writer is making no attempt in this article to render a report of this project, which will come in due time from the proper authorities, but as one of the workers in the ranks for nearly two weeks during the campaign he feels that possibly a few observations from the actual field may be of interest to dairymen in other sections and to breeders of purebred dairy cattle generally.

The demand for purebred registered bulls, coming as it did from the dairymen of two counties which have been conspicuously backward in this respect, seems particularly significant, and their working out of plans to secure the right sort of bulls was interesting to say the least.

The plan included the actual buying of the bulls by a committee of two responsible and capable dairymen from among their own ranks, aided by an expert secured from the staff of California college of agriculture. Thus did they assure the maintenance of the substantial standards of quality set up for bulls to qualify for purchase, and let it be stressed right here that most of these buyers are members of cow testing associations and that their demand for bulls out of dams that have produced 400 pounds butterfat in a year, or its equivalent, is based upon a standard of production which they believe necessary to improve their herds now that they are weeding out the unprofitable cows through testing.

Let me say that these buyers for the most part either had very fair ideas as to the price such bulls would command or else were open to reason on the subject, but their ever present dettermination was to secure bulls with the right quality.

Consider too that the bulls sold in this campaign, which I have since been told reached a total of 112, all went to replace scrub, grade, or otherwise inferior bulls in a section that was considered one of the most unpromising fields in California for such a movement, and it becomes apparent that there must indeed have been some strong general sentiment favorable to the situation.

After talking with a considerable number of the men who bought bulls, many of whom have been milking cows in Marin or Sonoma Counties for ten, 20, even up to 35 years, I find that one statement was made perhaps oftener than any other, and usually about as follows: "Well I have been milking cows most of my life, and have been using scrub bulls all that time. Now, when I am about ready to turn the herd over to the boy, I want to see him start right with a purebred bull, for at last I realize that the mistakes I have made in breeding to scrub bulls have cost me a good many thousands of dollars." This feeling on the part of so many of the older dairymen was quite evidently one of the strong forces behind the demand for purebred bulls, and with the splendid start made in this campaign it means that Marin and Sonoma Counties are at last in line for a tremendous improvement in the quality of their dairy cattle, an improvement that meets the hearty approval of some of the oldest dairymen who have learned that the scrub bull proposition is too wasteful a proposition to hand down to their sons.

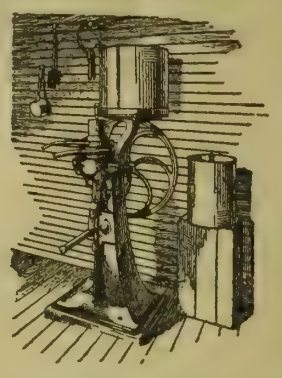
Pure Breds Win

A. F. Berri, (at right), a Marin County dairyman, signing the 100th order for a pure bred bull to replace his grade bull, in the Sonoma-Marin pure bred dairy bull campaign. The gentleman at the left in the picture is W. B. Hopkins, manager of Petaluma Cooperative Creamery, one of the moving spirits in California dairy affairs, and a star "bull salesman" during the campaign.

The breeder of purebred registered dairy cattle is especially interested in the point brought out above, that this large group of dairymen, buying purebred bulls for the first time, showed themselves willing to pay adequate prices for bulls that met their standard of production, and it is something of a shock to realize that not more than one-third of the available bulls that met the other requirements of good health, proper type, and general physical condition were able to qualify on the important point of having a dam with 400 or more pounds of butterfat. Consider too that these buyers stood willing to accept cow testing association records in the absence of breed association official or semi-official records.

The Sonoma-Marin campaign is assuredly only one of many movements that will be initiated in other California counties, and the conditions encountered indicate very clearly that if the breeders of registered dairy cattle in the state are to keep pace with the progress of the dairymen owning grade herds, and actually fulfill their function as sources of supply for bulls that will grade up and improve the production of these herds, they must give immediate attention to verifying the production of their own cows, either through authenticated breed association records or through cow testing association records.

This campaign proved beyond question the actual existence of a tremendous market throughout the state for purebred dairy bulls, a market that until now has been regarded as exceedingly difficult of access. The plaint for years has been that none of the established agencies, such as agricultural papers, the college of agriculture, the public sale, or the numerous livestock shows, have reached any considerable percentage of these possible dairy bull buyers, especially among the very considerable number of foreign born dairymen who do not read English and who stay right close to the job of milking cows and seldom



Over 20 Years Old

The old De Laval Cream Separator shown above is owned by Mr. Geo. D. Caney of Richfield Springs, N. Y. It has been used every day for over twenty years and is still doing good work.

This is not an unusual instance of De Laval quality and service, as there are thousands of De Laval Separators which have been in use as long and even longer. In order to determine the oldest De Laval Separators still in service, we will give a prize of

$25 to the Owner of the Oldest DE LAVAL in Each State

Simply write to your nearest De Laval office, giving the date you purchased the machine, length of service, size, serial number, and a statement regarding the service you have received from it.

Prize winners in each state will be announced in due course.

if ever take the time to attend a sale or show.

In this plan of purebred bull projects we have an agency that will reach every dairyman, under the most favorable conditions of personal contact, and I do not hesitate in going on record with the statement that the matter is now squarely up to the breeders of purebred bulls to do their part in producing the bulls that will meet the requirements and standards of these campaigns.

Incidentally the working out of this project has confirmed an idea the writer has long held, and which is shared by a large number of California breeders, that in the California college of agriculture we have at hand machinery for the promotion of the better livestock idea, and that the matter of breed preference will take care of itself with such assistance as the various state breed associations are able to render in movements of this kind. The successful working out of the principle involved in this campaign could just as successfully be demonstrated if the object had been the use of registered beef bulls, registered boars, or registered rams.

### COW TALK IN CITY STREETS

The opening of the stockyards at Los Angeles is an auspicious time to make certain patronage for the new yards. New Mexico has thousands of drouth cattle, and one or two districts of northeastern Arizona have felt it dry, but there mountain grazing prevails and a dry year in the summer makes fat cattle, as feed is stronger and there are no flies, but those same cattle returning to a lower country without reserve feed face a dangerous winter, and part must be shipped out. Another favorable indication for yards patronage is the fact that Northern California has had rains and that a good year is almost certain, with stock cattle and feeder demand and the heaviest beef demand and least supply known for years. November is the time that outside range districts must clean up and ship, if they intend to do so before snow, and November is the time California prefers to buy. Also the market faces no surplus of beef in local packing houses, hence each packer can absorb from 100 to 1000 beef, besides the Globe yards can care for 8000 head. Undoubtedly opening prices will be good as it could not otherwise make any favorable impression upon the livestock industry of the Southwest. If yards were glutted and prices slaughtered on the opening of the new market method one can imagine certain things sure to happen later.

The list of commission men to operate in the new yards as given out by the stockyards company includes Charles Hill, W. H. Goodno, Campbell and Stewart, Maurer and Washburn, and Condon, Johnson and Cook, Western Live Stock Co., Foster and Underwood, National L. S. Com. Co., Delmue L. S. Com. Co., Hampton L. S. Com. Co., D. H. Lilywhite E. Karples, and your truly, A. L. Spellmeyer.

### MILKING MACHINE HELPS

There can be little doubt now of the value of the milking machine and the important part that it is playing in the development of more profitable dairying. The contention that milking machines are harmful to cows, that they tend to tear down the udder and render the cows useless, has proven to be generally untrue.

The recent improvements that have been made on the leading makes of milking machines have made it possible for the practical farmer to invest in one with a comparative certainty of securing beneficial results provided he gives the machine care such as all machinery needs.

The list of instructions sent with a milking machine, or any machine is sent for the guidance and help of the user, and an observance of the same will prove to be well worth while. The milking machine, when properly cared for and properly applied, will save at least one man's labor in the milking barn; will produce cleaner milk; will save not only labor but time, and hence will make more money, and when operated according to instructions, will make dairying a more pleasant occupation.

The right use of the milking machine, in the right way, is just one more step toward more profitable dairying, more contented dairymen and more wholesome milk—H. R. Lascelles.

## Livestock News Notes

### LIVESTOCK SALE CALENDAR

November 16, Dispersal, Arthur & Maxfield Holstein Co., Hanford.

The report of the cow testing association in Stanislaus County for September shows 3188 cows tested with 288 producing over 40 pounds fat. The average per cow for the month was 27.2 pounds from an average of 723 pounds milk. F. L. Hogue owns the high cow for the month, a Holstein, which made 90.3 pounds fat from 2382 pounds milk. E. W. Looney owns the second and third highest.

Three cow testing associations in this state are now 100 per cent in the use of purebred sires. They are San Diego, Delhi and Riverside. It is a hard problem to convince some dairymen that a purebred sire is the only salvation of the dairy industry but they are slowly coming to believe it. Excellent work along this line is being done by the cow testing associations, the university, and the dairy council.

The annual convention of the California Wool Growers Association will be held at the Hotel Lincoln in Stockton, November 16 and 17, 1922. W. E. Bristol is the local chairman of the committee arranging for the entertainment of the convention.

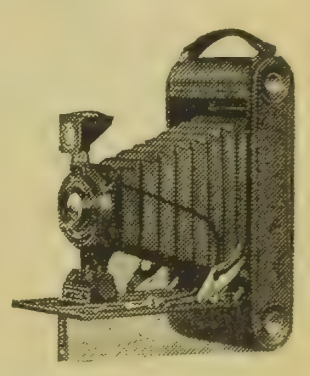
The Kern County cow testing association has completed its first year's work with 930 cows tested for the year. These cows averaged 269 pounds fat for the year with 160 producing over 300 pounds and 36 producing over 400 pounds. The high cow was owned by A. R. Buttles of Wasco and made 508 pounds. It will be interesting to note the improvement this association will make before its next annual report is issued. Very probably many of these cows have gone to the butcher and are being replaced by higher producers as that is the task of the testing association. It costs but little more to feed a 500 pound cow than it does one which gives but 200 to 300 pounds and the cost of care is practically the same.

O. B. Fuller died suddenly, October 18. No man in the Southwest has been more active in cattle circles in the last 15 years. His interests were varied. Coming from Iowa, he and his brother pioneered from Montana to Arizona, ending in California. In addition to large grain and farming operations he handled thousands of cattle. During all his work he was consistently constructive and probably no man did more to help producer cattle prices and stabilize values. He was a man of a great heart and kindly impulse, and quietly did many kind and generous acts of which his associates never knew except by accident.

FROM A KODAK NEGATIVE

KODAK pictures prove your selling arguments. Pictures are practical records of your crops, stock, equipment—records easy to make, vivid, authentic, permanent.

And the farm abounds with pictures for pleasure.



No. 2C Autographic Kodak Jr., with Kodak Anastigmat Lens *f*.7.7, makes large sized, clean-cut, sparkling pictures—the kind you want to make at the Thanksgiving reunion, for example. Size, 2⅞ x 4⅞ inches

## Arthur & Maxfield Holstein Co. Herd

## 70 Registered Holsteins 70

## at Public Auction, Wednesday, November 15, 1922

### Kings County Fair Grounds, Hanford, California

To terminate the existing partnership between J. W. Arthur and Wm. G. Maxfield their splendid herd of registered Holsteins will be sold to the highest bidder at public auction.

This is an unusually attractive herd of cattle, among some of their accomplishments the following are noted:

HIGHEST PRODUCING purebred herd in Kings County Cow Testing Association, with an average of 439.23 lbs. butterfat from 13,595 lbs. milk on 21 head, in a ten months' test.

HIGHEST 7 DAY RECORD in Kings County, over 33 lbs. butter on official test.

HIGHEST 365 DAY SEMI-OFFICIAL RECORD in Kings County, with over 1,100 lbs. butter.

HIGHEST PRODUCING COW in Kings County Association, with 702.6 lbs. butterfat from 20,375 lbs. milk in ten months.

THIS ENTIRE HERD HAS PASSED TWO CONSECUTIVE TUBERCULIN TESTS WITHOUT A SINGLE REACTOR.

If you want high producing cows, or heifers and bulls from such cows, make your plans now to attend this sale. It is a choice herd of cattle in excellent physical condition.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who arrange for terms prior to sale with California Breeders Sales and Pedigree Co.

## CHAFFEY HIGH VICTOROUS

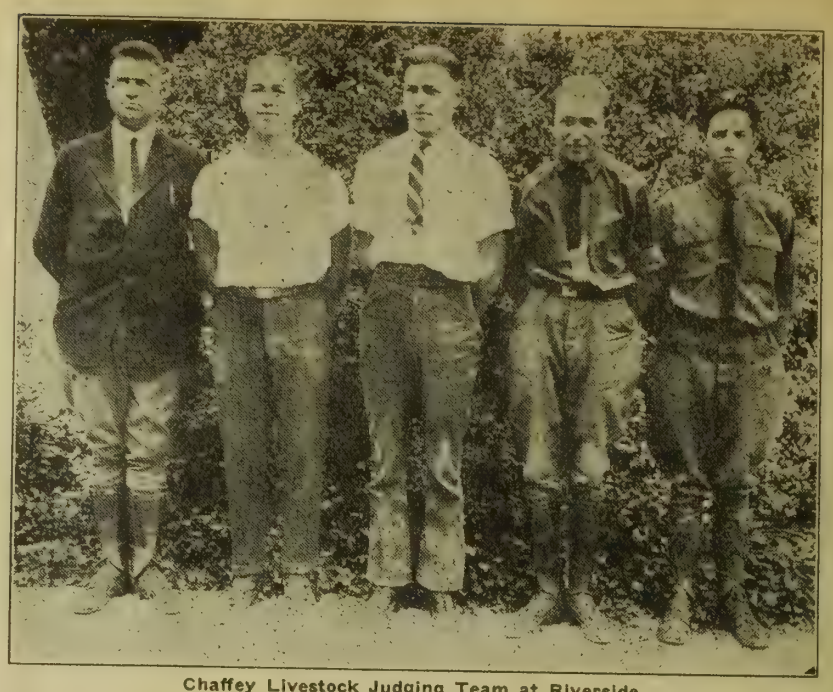
The judging team representing the Chaffey Union High School of Ontario won the judging contest held at Davis on October 27, and will represent California at the Pacific International Judging Livestock Show at Portland on November 4. Salinas High School was second and Esparto, third.

Winners of the contest at the state fair and at the Southern California fair were brought together at Davis to compete for the state championship which resulted in the victory for Chaffey.

For the past year or more the Chaffey boys have been outstanding in livestock judging contests and have not been defeated in the south.

Excellent coaching has helped them wonderfully and they have shown the results of consistent and unfailing work. Situated in a neighborhood full of fine livestock farms they have taken every advantage of their opportunities and it has shown up in their work. Sheep have been their stumbling block generally because sheep are not numerous around Ontario, but the Southern California and Los Angeles County fairs brought some wonderful herds of sheep into their district for a short time and they made the best of the opportunity for studying them.

Before leaving for Portland the team will have the advantage of a few days coaching in and around Davis under the direction of the university farm professors and great things are expected of them in competition with boys from the mountain states and the Northwest.



Chaffey Livestock Judging Team at Riverside

## AMERICANS MODERATE CONSUMERS OF DAIRY PRODUCTS

The United States is one of the largest milk, butter and cheese producing nations in the world, according to the United States department of agriculture, although it is not one of the largest exporting countries in any one of these three products, nor are Americans great eaters of dairy products.

Sweden, which has only one-eighteenth of our population, and only one-fourteenth of our cows, uses 69 gallons of whole milk per capita; and Denmark with about three-fourths as many cows, uses 68 gallons; while the United States uses only 43 gallons.

Not all countries use so much as Sweden and Denmark. Of 11 countries whose per capita consumption of whole milk is given in the new Handbook of Dairy Statistics, the United States comes exactly in the middle, with five higher and five lower, Sweden and Denmark being at the top of the list. The lowest is Italy, with a consumption of only four gallons of whole milk per capita a year; and next comes Great Britain with 22 gallons, or about half as much as our own country.

---

The dispersal sale of the Minor and Thornton Holsteins at Fresno on October 26-27 brought a surprisingly large crowd of buyers. About 90 of the animals were registered and the balance of over 200 were pure bred, but on account of lack of system in keeping records were sold as grades. The top cow of the registered cattle was bought by G. M. Brown of Burr Farm for $300. He also bought a couple of dozen others. R. M. Jessup of Glendale bought ten of the registered animals and McMillen took a like number for one of the state institutions. The top cow of the grades sold for $210 and the general average was around $200. C. L. Hughes of the Cal. Breeders Sales and Pedigree Co. was in charge of the sale and Rhoades & Rhoades of Los Angeles were the auctioneers.

The health fairy doesn't live in a tea or coffee cup, but little folks can see one in the bottom of a glass of milk.

*"The best herd of cows I have ever seen."*
*—John L. Smith.*

In THE HOLSTEIN-FRIESIAN WORLD, Syracuse, N. Y., issue of October 14, 1922, Mr. John L. Smith, nationally known judge of Holsteins, and who judged at Sacramento this year, writes as follows of his visit to Fred Hartsook's great herd at Lankershim, Calif.:

"We figured on a big day at Mr. Hartsook's so got a good start in the morning. Mr. Hartsook met us and we started in to see THE BEST HERD OF COWS I HAVE EVER SEEN. Production with type is his aim and he sure has it in his foundation."

This statement, coming from a prominent judge who has seen nearly all, if not all of the great herds of America and Canada, confirms the judgment of prominent California breeders and judges.

The wonderful quality of this herd is of particular interest at the present time to prospective buyers of registered Holsteins, for the reason that the herd has increased to the maximum size desired by the owner, and from now on regular draft sales will be in order. The first is to take place as follows:

**MEADHART BREEDING FARM**
**Fred. Hartsook, Lankershim, Calif.**
**First Draft Sale—60 Registered Holsteins**
(Selling on the Farm)
**Friday, Nov. 10, at 10 A. M.**

GREAT COWS with large yearly and short time records, many fresh or heavy springers.

SPLENDID HEIFERS, by high class sires and many out of high record dams, both long and short time.

PRACTICALLY EVERY FEMALE THAT SELLS BRED IN CALF TO SIR AAGGIE DE KOL MEAD, THE $30,000 SON OF MISS VALLEY MEAD DE KOL WALKER.

Prospective buyers who want production, type, good health, and the added value of cattle linked up with one of our greatest breeding herds, will find in this offering cattle worthy of their most careful consideration.

Every animal tuberculin tested and sold subject to retest by the buyer; every animal positively guaranteed to be a breeder.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who make arrangements before sale with California Breeders Sales and Pedigree Co.

# Stockyards Are Opened

By Jack Klein

THE opening of the new Los Angeles Union Stockyards on November 1 saw the first unit which had been entirely completed, practically filled with the finest collection of livestock ever brought together in the state. Because it was not known what the market could care for without being glutted it was decided to restrict the shipment for the first day to 60 cars of cattle which were proportioned among the different commission firms constituting the exchange. No embargo was placed on stock but an agreement was made to hold the number down if possible. A shortage of cars developed in Arizona at the last minute and a number of firms were not able to fill their quota.

The first train of stock arrived early Tuesday from Wyoming and Nevada, and when it was unloaded the visitors to the yards, which included a number of the packers, declared it to be the finest ever brought to Los Angeles for sale. Of the 19 cars of Herefords consigned from Jackson Hole, Wyoming, and loaded at Victor, Idaho, 10 cars were to the Campbell and Stewart Livestock Commission Company and nine to the M. K. Parsons Commission Company. A car each of steers and cows was sent down to the new market by P. C. Hanson, president of the Jackson Hole Cattle and Horse Breeders Association, by J. G. Imeson, secretary of the same association and by Bert Charter, Orin Seaton, Charles Wilson, Joe Deyo, J. D. Ferrin, W. S. Winneger, James Boyle, E. H. Martin, Lee Lucas and Mrs. Mary J. Lucas who are members of the same. C. J. Palmer sent two cars of steers. On the same train were a car of cattle and two cars of lambs from Lee Kenner, manager of the Manti Livestock Company at Manti, Utah. Also the Plymouth Livestock Company of Salt Lake City sent two cars of cows. All of this stock was finished in the style demanded in the Middle Western markets and the wise ones sitting on the fences predicted that it would open the eyes of Californians who are used to half fitted range stock being sent in as killers.

The rail birds changed their tune when three cars of mixed Shorthorns and white faces were unloaded for the National Livestock Commission Company by A. Brown and Company of Bishop. These three year olds were the equal of any of the northern animals and many predicted they would top the first day's market. One car in particular was as good as most of those sold in the old established yards. They will have considerable competition as the cattle from Jackson Hole are conceded to be equal to the best raised anywhere and the load of steers from Hanson appeared to be a picked lot.

John Sacra of El Paso and Martin and Hill of Visalia sent in 10 cars of good range animals to the C. H. Hill Livestock Company. These were principally two year olds of good size and of good quality.

A train of cattle, hogs and sheep from Wyoming and Utah which was not expected until late Wednesday also arrived Tuesday afternoon. The cattle consisted of six cars of steers and four of cows from Pinedale, Wyoming. These cattle were consigned by E. L. Plank, Guy Decker and Lou Heneck and were loaded at Rock Springs, Wyoming, after being driven 136 miles from the ranches. They were in excellent condition and show that the country along the line of the Union Pacific is capable of producing some very excellent beef cattle. These cattle were consigned to Campbell and Stewart.

Eight cars of May lambs from the Crane Creek Sheep Company at Ogden, Utah, were also on the train. These lambs were from among 175,000 spring lambs which this big company raised this year and were of top notch quality. They had been grain fed and were in excellent condition. Two cars of hogs from Millard County, Utah, accompanied them. The hogs and lambs were consigned to the Hampton Commission Company.

The first stock into the yards was two cars of hogs from Joe Biddle of Hanford for Manner, Washburn and Condon Company.

### CALIFORNIA'S FIRST UNION STOCKYARDS ARE OPEN

The Union Stockyards at Los Angeles are open. Selling began early Wednesday morning. Promptly at 8 a. m. C. H. Hill Company drove a car of 25 Idaho steers on the scales. The average on the load was 1056 pounds and the price was 9c. They went to Wilson & Co.

Campbell & Stewart began selling the Jackson Hole cattle right on the dot. The Hanson steers went to Hauser at 8½c. Wilson took a number of loads from 8½c down to 8c. Hauser took a car of cows at 7c. The Crane Creek Company lambs were the first sold when Wilson & Co. took 4 cars of clipped lambs at 13¼ cents.

At 10 o'clock no hogs had been sold.

### OPPOSING WATER AND POWER ACT

By J. J. Duell, Manager Kern County Farm Bureau

It will be a rancher's viewpoint that I will give you tonight, said J. J. Duell in discussing the proposed five hundred million dollar water and power act at a meeting of ranchers held recently in Rosamond, Antelope Valley. The ranchers are capable of making up their own minds intelligently, and from much thought on the matter some things are very clear to me, as the farmer's representative. While my ideas are not the same as those of the power companies I can not help but reach practically the same conclusion that they did. The act is not a state or people's project in any real sense but rather a political move fostered by private, personal interests for political motives. An unknown governor will appoint an unknown board for an unknown purpose, all in control of this board, as well as its rates and projects. They will have full power to draw on the state treasury or issue further bonds without asking anyone's permission. So far as the farmers are concerned, they will have nothing to say in the appointment of this board, which would be the result of political strength, principally in San Francisco and Los Angeles. The only voice the farmer will have in the matter will be in evidence when the county assessors and tax collectors call to gather the full quota from the farmers.

While the average amount per capita might be $146, the farmer himself would without any question be charged more than this amount, with slim chances of receiving any benefits whatever from the project and if an opportunity to use state power came his way, the rate he would have to pay would be governed by the board controlled by San Francisco and Los Angeles interests.

---

Loma Rica and Glen Olive Colonies in Yuba County have set aside a tract of land midway between them for a community recreation center. A dam was built to form a large swimming pool and a small pavilion on its banks. This became the pleasure resort of the district, and it is now planned to erect a hall nearby next year. There is a fine grove of oaks that will be preserved as a park for the neighborhood.

# First Lay, Best Pay

By Jean A. Koethen

ONE of the most important problems the poultryman has to solve is the selection of the productive and hence the the profitable pullet as early in her career as is consistent with justice to her and security for himself. If he could go through his flock on the first day of November and say to a certainty which hen will lay and which will not his fortune would be made. As it is, he is forced to wait and watch until time has shown which may be safely culled out of the flock and which will be profitable layers for one, two or three years.

Last year the poultry department of the Sonoma County farm bureau attempted, with the help of two demonstration farms, to prove that early producing pullets are also the heaviest and most consistent layers. Two poultrymen were found who were willing to cooperate in the test, writes Assistant Farm Adviser Melvin W. Buster, one with a flock of 420 pullets and the other with 991. The flock of 420 pullets was culled the 21st of July at 4½ months of age into 140 early maturing and 240 late maturing pullets. A record of their production was kept till the latter part of October when a heavy wind storm wrecked the house and made it necessary to run the two flocks together. According to this record the 140 early maturing pullets made the following per cent of production between the ages of 4½ and 8 months: 4½ to 5 months, 122 eggs, or 8.7 per cent. 5 to 6 months, 1470 eggs, or 34 per cent. 6 to 7 months, 2254 eggs or 54 per cent. 7 to 8 months, 2060 eggs or 47 per cent.

The 280 late maturing pullets laid 4½ to 5 months, 14 eggs, or 5 per cent. 5 to 6 months, 1326 eggs or 15 per cent. 6 to 7 months, 3682 eggs, or 43 per cent. 7 to 8 months, 3220 eggs or 37 per cent.

In other words, one-third of the pullets laid, in the 3½ months, nearly 42 per cent of the eggs produced by the whole flock.

Feed and cost records showed that the 140 early maturing pullets made a net profit of 11 cents per hen while the late maturing pullets for the same period had been carried at a loss of 28 cents per hen. The early maturing pullets had averaged more than a dozen eggs more than the late maturing birds.

### Early Pullets Double Production

The second flock of 991 pullets was culled into approximately equal groups with 495 early maturing and 496 late maturing. Records of this flock, compiled to the end of December, showed an average of 47.8 eggs for the early maturing pullets and 19.2 eggs for the late maturing. The highest production of the late maturing pullets was in September, when an average of 8.6 eggs per hen was secured. The highest production of the early maturing pullets was in October, when an average of 13.1 eggs per hen was reached. In November, when the early maturing pullets laid an average of 8.2 eggs, the late maturing pullets laid an average of 3.4 eggs or less than half.

The above figures are not startling nor conclusive, but they do point to the necessity of careful culling, and the thoughtful reader will immediately ask what was the method of culling followed and how fully can it be depended on.

### Culling for Maturity

Culling of pullets, like the culling of yearling hens, is done with the eye, the ear and the hand. The pullet that is mature at 4½ months has a red, well developed comb, a clear, musical (to the poultryman, at least) voice and glossy plumage. She sings and scratches and may be seen now and again looking for a nest. Perhaps she goes on the nest to see how it fits. She is alert, active and firm of flesh, though not fat. Take her in the hand, and her abdomen feels soft and nicely curved, while her pelvic bones and keel bone are spread well apart. The immature pullet, on the other hand, has an undeveloped comb, the points of the pelvic bones and keel bone are drawn close together, and she behaves more like a growing chick than a laying hen.

Trapnest records made at the Oregon station showed that the hens that made the best record in the year had the best record in the winter period. For example, those that averaged 269 eggs in the year averaged 44.25 eggs to January 31. Professor Dryden, describing the method of culling used at that station, says: The culling of the pullets will be accurate only if certain conditions preceding the culling are observed. First, the different breeds do not come to laying maturity at the same time. Second, the pullets in the flock to be culled should all be of the same age or nearly so. Third, they should have been reared under the same conditions and fed the same ration. "There are several ways in which the picking may be done. With a flashlight the laying pullets, if Leghorns or large combed breed, may be picked off the roost at night. Another way is to use the catching hook and do the work during the day. The most satisfactory way is to use a catching crate. The poultryman with a large flock to cull should know that they are of the same age and have had the same care, and should begin culling when a certain proportion of them are beginning to lay, this depending on whether he wishes to make one, two or more pickings or cullings. If he wishes to make two cullings and the pullets were hatched early in April, he may find in October that 25 per cent of them have the "bloom" which indicates that they are about to lay. These should be put by themselves and will be the very cream of the flock. The second picking should be made about six weeks later, or when about half the flock show signs of laying. In an average flock there will be about 25 per cent that show no signs of laying at that time, judging from their combs and wattles. These should be sent to market. If the poultryman prefers to make but one culling he should do it when about 75 per cent of the flock indicates laying condition.

# Los Angeles County Fair Poultry Awards

When Judge E. C. Brandt of Lee Summitt, Missouri, finished with the big poultry show at Pomona he pronounced it the best he had been called upon to judge this year. He predicted that the 1200 birds shown this time would be doubled for the next show.

Paul C. Kennedy who superintended the exhibit has the utmost confidence of all the breeders, and this year's show was largely a compliment to him. However, the interest was so strong and the treatment so satisfactory that next year's show is sure to be the biggest ever.

The complete list of awards follows:

Barred Rocks—Advance Dahlia Farm, Compton, 1st cock, 1st hen, 1st cockl, 3rd pullet, 1st pen. Golden Fule Poultry Farm, Porterville—1st cockl, second exhibition pullet, first exhibition pullet, 2d cockerel bred pullet, 1st pen. L. B. McNutt, San Gabriel—2d cock, 2d hen, 1st and 3rd pullet.

# Poultrymen's Guide

The value of chickens and eggs produced in California (1919 census) was $34,727,935.00. There is poultry on 92,409 farms in the state—78.5 of all farms. January 1, 1920, poultry of all kinds on farms in California numbered 10,811,183, a gain of 4.723,916 since 1910, indicating the rapid and important development of the industry. At the present prices of eggs, hens and baby chicks and the big demand upon hatcheries for more stock it is wise to order early. The representative advertisers whose announcements appear below are recommended to prospective purchasers.

### FOR WATER AND POWER ACT

**By John A. Livingston, President Placer County Farm Bureau**

I am for the water and power amendment because I see in it not only tremendous economic advantages but because it assures to the people the retention of their richest resources.

This measure is the biggest thing in the state of California. It will preserve and retain in the hands of the people their great heritage, their water and their power possibilities.

The water and power act will enable any community with the aid of state credit to secure its own water and power system or both if that is desirable. It is bound to give the people both water and power at greatly reduced prices.

According to available statistics under this plan, the people should secure under the proposed system water and power at one-third the present prices charged by the corporations.

This act is of vital importance to the farmers. It will make it possible to convert into fertile farms, lands which are now practically desert or at best but poorly developed. It will people these lands with happy and prosperous citizens, owning their own homes.

This will be accomplished without increased taxation. It will bring about the reduction of taxes by increasing the taxable wealth of the state.

Modesto is a shining example of what the application of water will do to a community. This measure will permit the development of vast areas of land which now cannot be irrigated. The farmers must get behind this act. They must not permit the power companies' propaganda to fool them.

### TREES

**Get My Prices** on Japanese persimmons, Kadota and Black San Pedro figs, Concord grapes, Muscats, Malagas and Thompson Seedless, rooted and Black Monukka cuttings. Nursery stock growing at El Monte, and Vista near San Diego. Easily accessible to Southern planters. Good stock at right prices. Fred W. Kelsey, El Monte, Cal.

**Grafted Walnut Trees** on Northern California black roots, scions carefully selected from best bearing parent trees, grown under expert supervision. First class in every respect. Placentia perfection, Eureka, Payne. Reasonable prices. Los Nietos Valley Nursery, Downey, California. Phone 692.

**Fruit Trees and Grapevines**—Still have unsold few varieties grapes grafted on resistant root. We ship all stock on approval, if not entirely satisfactory return at our expense. Write for our special prices. J. F. Miller & Sons, Healdsburg, California.

**For Sale**—Florida Sour Orange Seed Bed Stock, from fruit growers seed. All leading varieties avocados, grafted Placentia walnuts. Mathers' Avocado Nursery, Pasadena. P. O. Box 585. Phone Colorado 6044.

**Trees and Plants**—All kinds, Berries and Small Fruits a specialty at lowest prices. Over 25 years in business. Send for price list. M. J. Moniz, Berry Specialist, P. O. Box 264, Sebastopol, California.

**For Sale Grafted Walnut Trees** for sea-rus and deciduous trees. Order now for 1922 delivery. Get my prices. Ketscher's Nursery, 1101 E 4th Street, Santa Ana, California. Phone 572-W.

**For Sale**—General line of nursery stock and vines. Special attention to the needs of the home lot planter. Send for price list. McFeely Nurseries, Chico, California.

**For Sale—Grafted Walnut Trees** for season of 1923. Placentia, Eureka, Chase and Payne. Early buyers get the best. C. W. Story Nurseries, Rivera, California.

**For Sale—Hachiya Persimmon Trees**, grafted on lotus root. Get my prices. Geo. M. Ketscher, 1101 E. 4th Street, Santa Ana, California. Phone 572-W.

**For Sale**—Elberta Peach Trees, only 600 left, all 5 to 7 feet high, peach root. F. A. Tetley & Son, Riverside, California.

**Tree Agents** and working partner wanted. Cash Nursery, Sebastopol, Cal.

### WANTED

**Manufacturer of Garden Tractor** now doing business in all parts of the world is offering extensive territory to dealers and agents. This is a sturdy, practical and proven power cultivator for truck farmers, nurserymen, florists, home gardeners, suburbanites and small fruit growers. Big profits. Unlimited field. Machinery experience unnecessary. American Farm Machinery Co., 2531 University Ave., S. E. Minneapolis, Minn.

**Wanted**—Men with cars in each California County to represent established farm paper selling and collecting. Turn your spare time into money working part or all time. To responsible persons liberal guarantee, good territory and promotion. Write California Cultivator, 317 Central Avenue, Los Angeles.

**Wanted to Buy** dried fruit and walnuts and honey. Please send samples and state quantity and your idea of price. W. A. Collins, Box 397, Packing House at Santa Fe Depot, Santa Ana, California.

**Wanted**—New crop walnut meats and cull walnuts. Fred L. Mitchell & Son, 214 French St., Santa Ana, Cal.

# Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

### Sulphured Dog

Our dog had the misfortune to get shut in the sulphur house for about ten minutes. He was very bad for about two weeks but is well again except that he has had spells of coughing. Is there anything that we can give him that will help him? Do you think he will ever be quite right again?—Subscriber, Sanger.

Poor fellow, his throat and lungs will probably be sensitive for some time. Get four ounces of Syrup of Cocillana Compound (P. D.) and give a teaspoon of it once a day while it lasts. He will probably get over it.

### Lump Jaw

One of our milk cows has a lump on her lower jaw that is hard and we fear that it may be lump jaw. We have rubbed it with turpentine and olive oil and it has bursted once but does not disappear. What is the proper treatment for it?—Subscriber Lompoc.

Examine the teeth right over the lump and if any are loose take them out and clean the hole once a day until it heals. Paint the lump with strong tincture of iodine once a day and give her half a dram of iodide of potash in the feed once a day for three weeks. If this does not cure her repeat the treatment after a period of two or three more weeks. The lump will probably be slow in going away as bone diseases do not yield quickly to treatment.

### Leaky Teat

What can be done with a cow with a leaky teat? The leakage occurs only when the cow lies down.—Subscriber, Inglewood.

Very little can be done except to keep her milked out so the udder will not get too full. Any operation that would tend to close the opening would probably do more harm than good.

### Fails to Breed

I have a five year old Holstein cow that I am unable to get with calf. Have bred her four times. What can I do for her? Does it ever happen that a cow will come in heat after she is with calf?—Subscriber, Inglewood.

In very rare cases they do come in heat after being with calf. When she comes in heat again drive or lead her five or ten miles and warm her up well before breeding her.

# Vote Yes on Number 19

## THE CALIFORNIA WATER AND POWER AMENDMENT

The definite movement for the California Water and Power Act started at the convention of the League of California Municipalities held at Chico in 1920. The convention appointed a committee to draft such a measure, which at the 1921 session of the Legislature passed the Senate with only one vote being cast against it. The power company machine succeeded in defeating it in the Assembly by a narrow margin of four votes. Public spirited citizens, in conjunction with the League of California Municipalities, therefore resorted to the initiative. Three months were spent in working out the measure that finally went on the ballot.

GIFFORD PINCHOT, recognized authority on the nation's water resources, and Roosevelt's advisor in such matters, has declared it to be the best measure of the kind ever drawn.

The amendment has the support of men of the type of Senator James D. Phelan, Dr. David Starr Jordan, Rudolph Spreckels, Francis J. Heney, Hon. William Kent, Dr. W. H. Walker and Judge Frank S. Brittain, respectively president and attorney for the California Farm Bureau Federation; Senator L. L. Dennett, state authority on irrigation problems; William Mulholland, builder of the Los Angeles aqueduct; J. M. Henderson, Jr., president Associated Dairymen of California; Wylie M. Giffin, president California Raisin Grower's Association; F. H. Wilson, president California Peach Grower's Association, and the informed California public, loyal to the State and its best development.

The amendment is being vigorously opposed by the power companies and their allies, who are employing newspaper advertising, the mails and every other agency of publicity to misrepresent the amendment to the public. The same group resorted to the same methods of misrepresentation to defeat the King Tax Equalization Bill at the last session of the Legislature. They failed to defeat the King bill, and they will fail to defeat the California Water and Power Amendment.

A vote for the California Water and Power Amendment is a vote for

Lower Rates for Water
Lower Rates for Electricity
Lower Taxes

# Poultry Queries

(Conducted by Jean A. Koethen)

### Tomatoes and Melons

Please tell me your opinion as to the harm or benefit from feeding tomatoes, watermelons and cracked acorns to hens.—Subscriber, Los Molinos.

With acorns I have no experience and should be glad to hear from those who have tried them. My impression is that they contain too much fat for a laying ration, unless used very moderately. Tomatoes and watermelons are good in limited quantity but can easily be overdone. For a backyard flock the ordinary kitchen waste is all right, but when either tomatoes or watermelons are fed in large quantities the hens fill up on them and the egg basket suffers. Watermelons are practically all water, and while tomatoes are valuable for the vitamins they contain there is very little egg material in them. Reports have come to this column in other years of whole flocks that stopped laying when fed cull tomatoes liberally. If you want eggs you must give egg material, and that is contained in grain and milk and meat and not to any extent in greens or fruit.

### A Promising Layer

I have a pullet (R. I. Red) hatched in March, that laid her first egg Sunday, September 24. She laid 6 eggs in September, and 13 in October, up to the 16th. If she keeps on she may equal Lady Dryden, the Barred Rock pullet champion, and she has had neither extra care nor lights at 4 a. m. My R. I. Red chicks, just hatched are very light. Will they be darker later on?—Subscriber, Claremont.

They will darken as they get their feathers. No Red chick is red when it comes out of the shell.

### Alfalfa for Hens

Does alfalfa make as good green feed as kale or barley?—Subscriber, Claremont.

Alfalfa is the very best green feed. If you have it you need nothing else from May to October. For winter use either kale or barley. Many poultrymen depend on barley for winter feeding because it grows rapidly and can be cut several times. but a patch of kale is a good thing to fall back on in a dry winter.

### Excess of Protein

I have been feeding my hens the following mash: 600 pounds red bran, 400 red dog flour, 200 ground barley, 300 corn meal, 300 meat meal, 100 oil meal, 100 peanut meal, 100 bone meal, 50 charcoal and 10 salt. About a month ago I added to this 5 per cent dried milk. Yesterday I picked up a dead hen in the yard. Today I found one dead on the roost and have three that do not look right. One has distended crop full of water. I have given the whole bunch a dose of salts. Is my mash too rich?—Subscriber, Van Nuys.

The protein feeds, meat, oilmeal and peanut meal were about 27 per cent of the weight of the mash before you added the dried milk, which brought it up to 32 per cent. This is at least twice as much as you should have. You say, "If I had added whole milk I would not diminish the meat content." Possibly not, though when unlimited milk is available the meat content. is often diminished, but remember, whole milk is 90 per cent water, while dried milk is only 11 per cent water. As this rich mash has no doubt sorely tried the digestive organs of your hens it would be a good plan to take it away from them entirely for a week or so, keeping plain bran before them instead. When you give them the mash again add 50 per cent bran. The dose of salts was all right, and you might give another in a week, allowing one-half teaspoon to each bird. Mix it in a little moist mash so that each bird gets her share.

### Feeding Chicks

Where can I get literature which will tell me how to feed baby chicks? A friend told me to feed only sand and water the first day, then add clabbered milk for a day or two, then chick feed. Is this advice sound? My chicken house faces south but is open. Shall I close it? I suppose the chicks will require a heated hover.—Subscriber, Hemet.

Close the front of your house with tarred paper. It can be removed when the chicks are grown. As you do not say how many chicks you expect I can hardly advise about the hover, but you should certainly have one, and you will find the electric hovers adapted to any house. If you must manage with something cheaper you could get along for this one brooding with a small coal or wood stove and boxes in which the chicks can be covered with pieces of quilt or old blankets. You had better write the college of agriculture at Berkeley for Circular No. 99 (or some later publication, if they have it) on the hatching and rearing of chicks. Grit and water are all right for the first day in the brooder, but I should put chick feed before them the second day in a little tray and keep it before them till they have learned to eat. They can have the clabbered milk in fountains. If you have only a few chicks you will find that the time honored nursery ration of chopped hard boiled egg and dry bread gives them a splendid start. A mash is put before them for a short time each day after the first five or six days but it is not left before them all the time till they are from two to three months old. You will find a commercial chick mash the first three weeks and after that a comcercial growing mash a great saving of trouble, and there are many good mashes on the market.

### Sore Legs

My turkeys have a disease of the legs. When I apply coal oil they swell up and when I scrape them a yellow loose stuff comes off. What is it and how can I treat it?—Subscriber, San Joaquin.

I do not know what this disease can be. If it starts in the feet it may be scaly leg. I am afraid you are making it worse by using kerosene, which is very irritating. If there are loose scales on the feet soak them in warm, soapy water, and rub with balsam of Peru. If only the legs are affected paint with iodine every other day. Iodine is a safe remedy for any kind of sore.

### Roupy Pullets

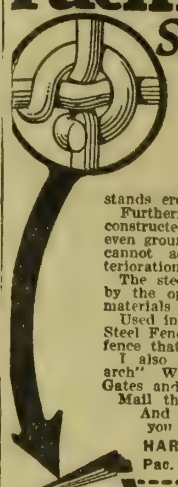
My six months old pullets have what seems to be a cold. Wattles swell, windpipe becomes choked with a slimy substance, split in roof of mouth is continually filling with corruption, one side of face swells so that eye is closed. House is cleaned and sprayed heavily every week, droppings boards cleaned every morning. There are no drafts on the roosts.—Subscriber, Inglewood.

The swelling of the wattles is unusual, but the disease is evidently roup. If there seems to be an abscess on the swollen side of the face you will have to open it and cleanse with peroxide of hydrogen diluted half and half with water. Then spray all mucus surfaces with the following solution: Extract of witch hazel, 4 tablespoons;

Build a Better Fence and Save Money

Build an all-steel fence around your ranch and save money. My prices on highest-grade steel fencing are so low that you cannot afford to consider substitutes. I buy tons and tons of fencing which is shipped direct to my warehouses by water at a tremendous saving in freight. I share this big saving on freight with you by reducing prices.

"Pacific" Fence
Stiff-Stay Type



Here is a fence that is ideally designed to give unusually satisfactory service on Pacific Coast ranches. Note the illustration of the "Pacific" knot. It securely binds the stiff, picket-like stay wires to the well-crimped line wires, producing a neat looking fence that goes up easily and stands erect and trim under strain.

Furthermore, the "Pacific" knot is so constructed as to be entirely flexible for uneven ground and it is open so that moisture cannot accumulate and cause rapid deterioration.

The steel in "Pacific" fence is produced by the open hearth process. Only purest materials are used for galvanizing.

Used in combination with my "Red Top" Steel Fence Posts it makes a strong, sturdy fence that will last for many years.

I also carry a complete line of "Monarch" Wrap-stay Fence, "Square Deal" Gates and Barbed and Plain wire.

Mail the coupon for my FREE catalog. And remember my low prices will save you money when you build a fence.

liquid carbolic acid, 3 drops; water, 2 tablespoons. Use the spray twice a day till the symptoms abate. An easier treatment is to dip the head twice a day in a weak solution of potassium permanganate. Dr. Salmon recommends washing cavities of nostrils and throat with peroxide of hydrogen diluted 1 to 3 times with water. If the eyes are swollen and sticky they should be washed with a boric acid solution. But you will never rid your flock of roup till you have remedied the cause, whatever it is. You say there are no drafts. Are you sure there is sufficient ventilation and that you have no more birds in the house than can roost comfortably? Crowding of chickens into a poorly ventilated house is one of the most frequent causes of roup.

### Chicken Pox

Recently light colored scabs have formed on the heads of some of our young turkeys and now it has spread to the eyes and they are partially blind. Is this chicken pox? If so, what is the cause, the cure, and is there a preventive?—Subscriber, Chino.

If I could answer all these questions I would be doing the poultry industry a great service. Nobody quite understands the cause of chicken pox. It is very contagious, but some poultrymen believe it has its beginning, in some flocks at least, in digestive disorders due to heavy feeding. For this reason sulphur is sometimes recommended as a cure. The following formula was given me by a turkey breeder of considerable experience who said she had cured some bad cases with it and had never lost a case: Mix and grind 2½ pounds nitrate of soda, 2½ pounds copperas and 2½ pounds Epsom salts. To this add 2½ pounds powdered sulphur, 3¾ pounds dairy salt, 2 pounds carbonate of soda, ½ pound ground ginger and ½ pound carbonate of magnesia. Add 12½ pounds dry bone meal, and 12½ pounds fine charcoal to the mixture. Mix about 5 pounds of the above with 50 pounds mash for 100 turkeys. When this is gone mix 1" pounds of the mixture with 50 pounds mash and then a third time 6 to 10 pounds of the tonic with 50 pounds mash. Carbolated vaseline is rubbed on head and wattles.

### Sick Ducklings

Why do my baby ducklings get diarrhea? I feed them bran, grit, rolled oats, mixed with sour milk, and a very little water.—Subscriber, Maywood.

I suspect it is partly lack of water that makes them sick. Ducklings need water with every meal, but it should not be very cold nor left for them to play in between meals. Their feed should be moistened with water instead of milk. The first day or so after hatching bread crumbs or cracker crumbs scattered on a board with sand is sufficient. When you begin their regular meals on the third day give bran moistened till it is crumbly, with at least 10 per cent sand or chick grit added. Feed this on the board four or five times a day. After a week or ten days a little corn meal may be added and the amount increased till the ration is equal parts bran and corn meal. Never omit the sand in the feed nor the water to wash it down with. Some breeders add chopped alfalfa or other greens to the mash from the start; others give no green the first week, but make it 25 per cent or more of the ration after the first week.

## BABY CHICKS TRAVEL SAFELY TO MEXICO

The shipping of day old chicks has grown to be an important industry. Every hatching season sees an increase of thousands of orders from poultrymen and farmers who appreciate the convenience of having their hatching problems looked after by experts. The baby chicks are shipped in comfortable containers and arrive at their future homes ready to take up the business of growing and producing.

Successful shipments are reported even to points in Mexico. The Superior Egg Farm at Anaheim recently sent by express 34 day old chicks to Empalme, Sonora, Mexico. They left Anaheim at 4 p. m. Wednesday and arrived in Sonora, Mexico, Saturday at 6:30 p. m. Every chick arrived safely and every one lived. Another shipment of 54 left October 3 and arrived in three days, all alive and well. Regulation cardboard shipping boxes were used, no feed being given. California poultry is being sent to within a 75 hour radius of Los Angeles which includes practically everything west of Chicago.

## POULTRYMAN'S CALENDAR—NOVEMBER, FATTENING FOR MARKET

November work with the pullets consists mainly in intensifying the work of the preceding months. Every pullet hatched before May ought to be laying in November, and careful feeding is tremendously important. A good laying mash, a mixed grain feed, abundant greens, are the essentials of the November ration. To this should be added if possible a daily meal of mash moistened with sour milk and a part of a meal at least of sprouted oats or barley. Some poultrymen feed sprouted grain for breakfast; others make it part of the evening grain ration.

With Thanksgiving so near, the first of November will see all birds that are to be marketed on a special fattening ration. This consists of moist mash fed two or three times a day and cracked corn for at least the grain ration. Equal parts corn meal, ground barley or ground oats and middlings, moistened with sour milk makes an excellent ration for fattening, and may be fed as often as the birds can take it without too much loosening of the bowels. Twice a day is best for most birds, but it may be given three times a day the last week.

To fatten turkeys begin in October by adding a little cracked yellow corn to the ration of wheat and barley. When the birds are accustomed to cracked corn, begin to change to whole corn and gradually diminish the amount of other grain.

## COCKEREL AUCTION SALE

Tulare poultrymen have staged a cockerel auction at the fair grounds on November 22. Every bird consigned has with it a sworn statement of breed and egg record of dam and sire's dam. The Leghorns have back of them 250 egg or better stock, on both sides. The heavier fowls are from 225 egg stock. All the birds will be on exhibition at the sales pavilion at the Tulare fair grounds for three days before the sale. Birds are consigned to the sale by breeders in California, Washington and Oregon.

## MARICOPA COUNTY POULTRY SHOW

The ninth annual show of the Maricopa County Poultry Association will be held at Glendale, Arizona, December 6-9.

NEW TANNING DISCOVERY MAKES

WOLVERINE!

The 1000 Mile Shoe

*It will be three years this Fall since I bought Wolverine shoes, and they are good yet. I wore them most of the time. They are the best fitting and easiest walking shoes I have ever worn. They are certainly made to stand the wear and tear such as farmers give shoes. They are always soft and pliable, in Winter and Summer.*

*Walter Hoff, West Saginaw, Mich.*

*Double Tanned Horsehide Through and Through*

# No Leather in the World Like This—*Stays* Soft

The Wolverine brings a new era in shoemaking. For we specialists have perfected a secret process of tanning that means better workshoes than any known before.

The leather in the Wolverine stays soft. It does not dry out after wetting like a hard board, as other leather does. After every soaking it dries out as velvety soft as new buckskin. Thus permanent comfort is assured. And this new-day leather wears longer than men thought possible! No other leather in the world is like it.

We make this leather from horse hide by our secret process in our own tannery. Horse hide is the toughest, longest-wearing leather known — the leather used for Cossack saddles and for baseball covers because it is the only leather that will stand the pounding. Yet we give this thick, tough leather almost the softness of velvet. It stays soft. And we increase its natural wear-resisting powers. It wears and wears and wears.

**WOLVERINE**
**Comfort Shoe**

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

And, when you consider how they wear, these new-day shoes are very low priced. For we effect very large economies through the operation of our own tannery.

## For Every Work Use

For field and factory, for forest and mine, for oil field, camp and motor — for every use there is a Wolverine model to outlast rough work and give perfect comfort always.

If your dealer does not have the Wolverine we will see that you are supplied. Send the coupon for catalog.

Peaches: Market steady. Locals and Northerns, best, 4@5; poorer, 2@3.

Pears: Demand good, market firm. Northerns and Locals: Bartletts, best, 6@7; ripe, 3@5.

Persimmons: Lb., 8@10.

Pomegranates: Lb., 6@7.

### CITRUS FRUIT

Grapefruit: Arizonas, 65-96 sizes, 5.50@6.00.

Lemons: Demand and movement light, market steady. Special brands, fancy, 9@10; choice, 6.50@8.50.

Oranges: Demand moderate, market steady. Valencias, special brands, $10@11 according to size.

### HONEY

Colonies generally in good condition for winter. Nectar yield from alfalfa reported unusually light. Demand and movement of honey barely moderate with relatively few inquiries for carlots. Market firm and many beekeepers and shippers reported holding for higher prices, expecting a general advance due to the tariff. Carlots for outside shipment ranged per pound as follows: White Orange 10@10½ cents; one car sold locally at 9 cents. White Sage, 8¼@8¾; one car 9¼ cents. Light Amber Sage, 6½@7 cents; Light Amber Alfalfa, 6¼@6½ cents. Beeswax: Cash to growers 20 cents per pound.

### WALNUTS

Prices named by the California Walnut Growers Association on last Tuesday are: No. 1, 22½; No. 2, 17½, and fancy budded, 26. Last year's closing price for No. 1 was 27. The market opened at 24½, but only stood at that point for a day, strengthening immediately and moving up to 27.

### BEANS

California Lima Bean Growers Association, October 28:

Prices on all varieties have moved upward in October on California, Michigan, Colorado, New York and Idaho beans, on some varieties three cents per pound. Week ending October 28 was best of the season for California Lima Bean Growers Association, sales amounting to nearly 30,000 bags this week at prices ranging from 9.00 to 9.10 for Baby Limas and 7.75 to 7.95 on regular Limas. It cannot be expected that the market will continue to be as active during November as it was during October. The limited remaining stocks could not stand an equal sales demand, and November is normally quieter than the October market on Limas and Baby Limas particularly. Investigation seems to show that about 80 per cent of the Limas, and 95 per cent of the Baby Limas are already gone from the growers hands (outside of association holdings), and the harvest completed. This creates a strong situation when combined with light stocks and promises a firm and further advancing market as the season progresses, although the next few weeks may be relatively quiet.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Prices quoted f. o. b. L. A. to producers:

| | |
|---|---|
| Tame Oat | 20.00@22.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 8.00@10.00 |
| Barley Straw | 7.00@ 9.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around $22 as a fair average. No. 1 dairy is varying from $15 to $17 with $16 as a mean or average price. Standard alfalfa is not much in evidence. Few offer it; fewer want to buy. If sold it brings from $10 up.

# San Francisco Markets

| | |
|---|---|
| Large Whites | 6.25 |
| Small Whites | 6.10 |
| Pinks | 6.70 |
| Mexican Reds | 5.75 |
| Red Kidney | 6.70 |
| Bayos | 7.00 |
| Henderson Bush Limas | 10.20 |
| Cranberry | 7.50 |
| Blackeye | 5.50 |

### HAY AND FEEDSTUFF

Under date of October 28, A. W. Scott Co. says:

Receipts 716 tons compared with 444 previous week. Continued light receipts have caused a firm market with prices showing some advance. Shortage continues due to railroad situation and receipts at all markets have been light. Qualities have been better and good grades have been readily taken up at stronger prices. Export and coast shipments have been active and in better volume. Interior and country trade has been extremely light and prices slightly better. Alfalfa has been strong and with better demand. Larger holders in the country have been unwilling to sell at current market.

We quote today wholesale prices in carload lots as appear from dealers' trans-

fers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.

## Snappy Notes on Livestock

By A. L. Spellmeyer

The week previous to November 1 opened with steers on an average 7.50 price, good fat cows 5.50, calves around 7.00, hogs 11.00, lambs 13.00. For the last ten days various lots of extra fat steers have been shipped into the Globe Feed Yards preparatory to the opening day of the stockyards, Wednesday, November 1. Most of these consignments were either specially arranged for or purchased by commission firms or speculators in the country and brought in. The estimate of well informed men in that the Los Angeles market can take in addition to present contracts some 900 head daily of beef cattle, four cars of calves, feeder cattle as demand shows, and all lambs and hogs available. The opening day received its full quota of 60 cars to cover, composed mostly of consignments of 6 to 10 cars each, together with some very good lots of lambs and hogs. Sufficient pens are covered and concreted and finished to hold the present volume. The exchange building is nearing completion but it will be at least two weeks before it is ready for occupancy, business and phone service, from its present appearance.

The disposition of the livestock trade is established in the opening week of areestablished in the opening week of the stockyards, and this has affected the outside feeder trade.

Two thousand twos and threes steers are held for sale at Springerville now at a price of five cents delivered and weighed Cooley, Arizona, and freight paid to Holbrook. Part of Springerville catttle have been already sold. Two thousand threes and fours Herefords 950 pound steers are offered in West Texas for immediate sale at a fraction under five cents. These lots indicate that feeder steers have lowered in asking prices from 25 cents per 100 pounds to 40 cents in the last ten days. Parts of Utah and Nevada are still holding their cattle almost a cent higher.

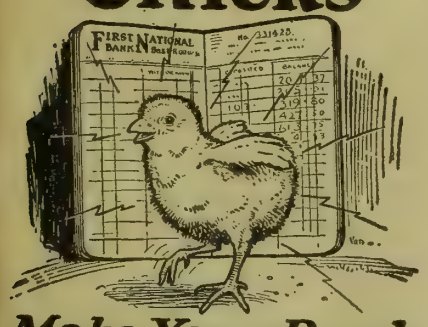
Cows are in slow demand unless very heavy and fat. Few California buyers seem to want cows yet the ranges need many thousands if the expected rains arrive. The stocker cows at 3.00 to 3.50 per 100 pounds by weight are generally offered without takers f. o. b. range. While this depression seems to exist in feeder and stocker trade beef is strong and prices firm for good steers with some lots of fancy cattle costing killers 8 cents, and some heavy cows 5.75 to 6.

The next week should indicate through the stockyard sales regular tendencies. A surplus of heavy calves is claimed but buyers for light calves have not been able to get enough at the 7.00 to 7.50 price they offer.

Mr. Maurer was formerly manager of the old Schwartzchild Sulzeberger plant here that merged into Wilson & Co. and since then Mr. Maurer has been active in the sheep and cattle business. His firm is known as Maurer, Washburn and Condon. Mr. Fred Washburn formerly head of the Western Meat Co. in San Francisco is a member.

Mr. Charles Hill was formerly manager of Wilson & Co. here and is well known to stockmen. Mr. Stewart is from Kansas City and is of the firm of Campbell and Stewart, Mr. Campbell being well known here as a buyer for a local packing house. Mr. Goodno is in the hog commission business and was formerly with the Cudahy Packing Co. of this city. Mr. Harmon was formerly in Kansas City. Mr. John Woodward is senior partner of the well known independent firm of Woodward & Bennett, meat packers of Los Angeles, and Mr. Jefferies is the head of the Newmarket Co.—A. L. Spellmeyer.

# Raise Fall Chicks



## Make Your Bank Account Grow!

Has it occurred to you that RIGHT NOW is the best time to start raising chicks. Ordering from our November and December hatchings, today, will insure you the highest prices next spring when these chicks become broilers and fryers! Keep your brooding equipment at work.

Our chicks are all hatched in ELEC-CHIC (automatically controlled) Incubators—the livest, healthiest chicks you ever laid eyes on. Easier to raise than a backyard full of weeds. They come from strong, vigorous pure-bred parents who have lived all their lives on a farm, with plenty of green feeds and the whole farm on which to exercise. This insures vigorous, robust health, and rapid development in their offspring. If they are ELEC-CHIC Hatched they will make big profits for you.

These chicks are being marketed through our sales department for ELEC-CHIC cooperative hatcheries. For prices and delivery dates,

### PACIFIC SLOPE DAIRY PRODUCTS SHOW

From the standpoint of the dairy farmer, The Pacific Slope Dairy Products Show at Fresno, November 13-18, will be of vital interest, because it will portray every branch of the industry through educational and commercial exhibits. The college of agriculture will have charge of the educational displays. California Dairy Council through its booth and the "Milk Fairies Play," will tell of the work it is doing to promote a keener realization of the value of dairy products as human food. State department of agriculture will tell of the work it is doing to eradicate diseases of cattle and for the protection of livestock generally. County displays will tell the story of dairy products in the leading milk and butter producing sections of California. There will be some 50 commercial exhibits which will have not alone a commercial interest, but an educational value as well.

But these exhibits do not cover the activities of the Fresno show in its entirety by any means. Manager C. L. Roadhouse of the show, and Sam H. Greene, secretary and manager of the California Dairy Council, point out that the contact that farmers will get with their associates in the educational and manufacturing ends of dairying will be of inestimable value. The show will bring together conventions covering all of the manufacturing branches and government authorities having to do with dairying.

Breeders associations representing the principal breeds of dairy cows on the Pacific slope will maintain headquarters in the Fresno auditorium during the show and hold conferences there.

The conventions scheduled are: California and Southwestern States Ice Cream Manufacturers' Association, November 13-14. State Milk Distributors' Association, 15. California Dairy Council, 16. Dairymen's Conference with State Dairy Inspectors, 16. California Creamery Operators' Association, 17-18.

Tentative program announced is: Monday, November 13, formal opening; Ice Cream Supply Men's mystic entertainment; awarding of medals. Tuesday, Stanislaus and San Joaquin Counties Day, Lions' Club luncheon, Fresno Y. M. C. A. athletic show. Wednesday, Merced and Madera Counties Day. Thursday, Kings County Day; Kiwanis Club luncheon; Y. M. C. A. athletic show. Friday, Tulare and Kings Counties Day, Exchange Club luncheon. Saturday, Fresno County Day.

### CHAMPIONS AT THE CALIFORNIA NATIONAL

**Shorthorns**

Senior and grand champion bull—Caledonia King 2d, Caledonia.

Junior champion bull—Caledonia Commander, Caledonia.

Junior and grand champion cow—Knights Lassie, Pacheco Cattle Co.

Senior champion cow—Princess Royal, T. T. Miller.

**Herefords**

Senior and grand champion bull—Mischief Fairfax, C. S. Howard.

Junior and champion bull—Beau Blanchard Jr., C. S. Howard.

Senior and grand champion cow—Bocaldo Beauty, Romie Jacks.

Junior champion cow—Eulalie Velie—Briggs & Son.

**Holstein-Friesian**

Senior and grand champion bull—King Pontiac Musa of Netherland, Millbrae.

Junior champion bull—King Pontiac Salteria Prilly, Bridgford.

Senior and grand champion female—Millbrae Pontiac Sarcastic Maid, Millbrae.

Junior champion female—Abbekerk Adirondac Maid Prilly, Bridgford.

**Jersey**

Senior and grand champion bull—Financial Corrector, Waterloo Jersey Farm.

Junior champion bull—Naomi's King of Mossdale, J. E. Thorp.

Senior and grand champion cow—Goldies Dame of Onata, Waterloo.

Junior champion cow—Gypsy May of Mossdale, J. E. Thorp.

**Guernseys**

Senior and grand champion bull—Nobleman of Maplehill, Humphrey.

Junior champion bull—Florriedale of Secret King, J. A. Brown.

Senior and grand champion cow—Mayhew's Bonnie Lass, Humphrey.

Junior champion cow—Escalon Beauty, Humphrey.

**Ayrshires**

All championships by the Le Baron Estate.

The California Cattlemen's Association will continue through November holding meetings throughout the state to discuss local problems so that the association may formulate its program of work for 1923. All cattlemen, whether members or not, are asked to attend.

# Get a Tractor With Plenty of RESERVE POWER

Don't buy a tractor with too little power—one that will fail you when extraordinary conditions are met. You want your tractor to plow deep and fast despite hard, dry soil conditions. You also want to take full advantage of brief periods of favorable weather. Only a dependable tractor, possessing ample reserve power, will do this successfully. Such a tractor usually requires no extra labor to operate. Therefore, it usually does your work most economically.

# OILPULL

## The Cheapest Farm Power

Because this dependable tractor has a great fund of reserve power always available, you never need operate it under the strain of an overload. Even under extraordinary conditions it does its work with greatest ease. This means long life—an average of 10 years or more of service. It means low upkeep cost—a repair expense of only 50% of the Government's national average. Besides, in the OilPull, you find Triple Heat Control—the wonderful system of oil burning that positively controls motor temperatures. This feature insures maximum power from cheap kerosene, stove tops and distillate. You save 39% of the fuel when burning kerosene—save more when stove tops or distillate are used. Write for special booklet describing Triple Heat Control and other OilPull features. Or see your Advance-Rumely dealer.

# WESTERN CANADA

## for Wheat Growing, Cattle Raising and a Happy Home of Your Own

Prosperous Farms and Happy Homes await those who are desirous of enlarging their present resources and securing for themselves homes in a country that, while yet in its infancy, has made itself famous by the quality of the grain it produces and by the excellence of its live stock.

### There are Millions of Acres

of the highest class of soil available for the man whose object in life is to become his own landlord, and who wishes to share in the opportunity which has given wealth to the thousands of Americans who, having started on Western Canada farms with but small means, are now writing home to their friends, telling of what they have done. Lands are cheap and homesteads farther from lines of railway are **free to settlers.** Upon these lands can be grown the best of wheat, oats, barley, flax, grass, hay, fodder corn and sunflowers.

Cattle winter in most places without shelter; dairying is highly successful. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write to

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

## EDITORIALETTES

Next week dairy equipment people, manufacturers of dairy products and other interests closely allied to dairying will gather in Fresno. Many directly connected with dairying will also go to see what the manufacturing and equipment interests are doing. So we take pleasure this week in giving on cover a really truly dairying scene. This is the dairy of the Los Angeles County Farm, located near Hondo.

* * *

It is possible the dairy equipment people at Fresno may regard this illustration as showing equipment hardly up to the latest moment in efficiency. We presume this is true, for modern day equipment of the dairy barn is largely of steel, is well built and is becoming so reasonable in price that it is within the reach of the dairyman. However, the big suggestion in that illustration is the thorough cleanliness made possible in an every day plant. Water under pressure is practically necessary in the modern dairy barn. With it the quickest, cleanest, disposal of the wastes of the dairy barn is possible. Immediately outside the barn is the conduit which picks up the wastes and the water and carries them directly and distributes in the alfalfa field.

* * *

King Cotton was monarch in all the Imperial Valley this week. His throne was located at Calexico and from that point the pageant was directed. The city on the international boundary was decked in festival gayety and entertained guests in number far greater than anticipated. Every one of the eight days was a big day with special program. Of course parades, dances, speechmaking, music, fun were in evidence all the time. Each of the Imperial Valley towns had its day, and on Wednesday Los Angeles turned out to do homage to the reigning monarch. San Diego came down on Thursday, and other outside communities filled in the days which were allotted to them.

* * *

Mexicali, just a step across the international boundary, aided as hostess in the festivities. Of course the real show was made up of cotton and its many products. Imperial Valley people believe that the Southwest needs education as to the boundless possibilities of cotton growing and cotton manufacture. Imperial Valley hopes that the festival will result in more manufactories. It is hardly one hundred per cent efficiency when we grow cotton in California, pay freight on it to Boston, pay the Bostonians for manufacturing it, then pay freight back to the Southwest. We can manufacture our own sheets and pillow cases in California as well as can the people of Massachusetts.

* * *

The citrus shipping season ended October 31. There are still some 300 or more cars of Valencias to go. These will probably be sufficient to supply the market until the Sacramento, San Joaquin Valley and Arizona fruits ripen sufficiently to meet the demand.

* * *

In taking account of stock the Riverside section has reached the conclusion that "Riverside's output for the season shows that section to be only a little over 12 per cent shy of normal crop. Total shipments for 1920 and '21 were 3,705 cars while shipments this year aggregated 3,175. The average for that district for the last ten years has been 2,975. Thus notwithstanding the cold of last January Riverside is still shipping 200 above the average.

* * *

This is evidence that the cold of last January was a mere piker compared to that of 1913. The Riverside section shipped that year a total of 850 cars, while the preceding year it had shipped 2,919 and the year after the freeze 4,293.

* * *

Total shipments from California show most gratifying condition. Oranges shipped by rail aggregated 29,073 cars. To this may be added approximately 500 cars shipped via Panama Canal and more than 10,000 cars of lemons shipped by rail and water. This makes a total in excess of 40,000 cars sent out of the state. This is almost exactly two-thirds of California's total shipments for the year 1920 and 1921 and compares very favorably with the output in 1912 and 1913. That year the total of all citrus fruits was 18,960, while the total for the preceding year was 40,680 or more than a 50 per cent reduction in the crop. Particulars of the year's shipments may be seen on market page.

## CALIFORNIA CHRISTMAS

It is already rather late to suggest "shop early," but we may be pardoned for making a suggestion or two.

The first suggestion is remember your friends at Christmas. When it is all over and the cost and the labor are considered we resolve to ever after ignore Christmas. That feeling lasts only for a day—or for a moment—, then the joys of Christmas return as we count the many little happinesses during preparation and participation. We believe we are safe in suggesting that the happiness which comes from the preparation of things for Christmas is greater with many than that which comes from receiving.

Note that we say pleasure of preparation, so we suggest make it a California Christmas. Do the shopping on your own place, you who are growers of fruits or of nuts or other products which are different.

The other day we tested a product, or rather a combination of two products, strictly Californian and withal good to look upon and excellent to taste. It was simply a dried half of apricot steeped in light syrup, again dried in the sun to remove stickiness, the half of a walnut meat pressed into the cut side, all rolled in powdered sugar. The household folks may not think the editor is competent to give culinary suggestions but "believe you us" that little titbit was good and added to a bunch of California confections it helps to make up a wonderfully fine box.

Besides it is all good advertising for California, for the folks "back there" will pass it to their friends and say: "Our folks out in California made these out of their own farm."

But that is only one suggestion. Note the household department of last issue. The suggestions there may not reach one thousand and one, but there are a lot of them, and it makes one's mouth water to read them over.

## FARM BUREAUS

We are in receipt of a letter from one of our men in the northern part of the state in which he says, "Regarding matters of interest, the principal complaint I hear is the failure of the farm bureaus to market various products, and (including granges) their devoting more attention to social than to business matters."

Local farm bureaus, like lodges, churches and other local societies depend upon the individual members. If a majority of the members take an interest in community matters and exert every effort to see that the business in hand is promptly and properly attended to the organization is bound to be a success. And this does not mean that this interest must only be manifested on meeting nights for there is always more or less work to be done between meetings. Be a booster for your organization and tell your neighbors, who are not members, what is being done and what you hope and expect to accomplish by united effort. Above all things do not be a knocker. If you can't say something good on the outside about your organization keep quiet. Reserve all of your complaints and kicks for the meetings. Make them as loud as you want to there and keep it up until you get the action you want or are convinced that you are wrong, then get on the right side and help put the thing over. Remember that few organizations of this kind are a success unless there are some people in it who are not afraid to get up and express their opinion in open meeting, but nothing will so quickly or effectively kill an organization as the knocker who says not a word at the meetings but is loud in his denunciation of the action taken the minute he gets outside.

The social features of these meetings also have their place, and many people would lose interest in an organization of this kind in which cold everyday business constituted the entire program at every meeting. It has been said "There is a time to work and a time to play," and while some never seem to find playtime we are always working with the end in view that our playtime will come later. However, the social features introduced in a meeting help to relieve the monotony and are the means of bringing out some people that would not otherwise attend. Of course this can be overdone, and sometimes we do too much playing at the expense of the more serious matters that should have the attention of the organization. Remember, at all times, the business for which the organization is intended should have first attention with the social features as of secondary importance.

Marketing problems are not always as easy to solve as some of us imagine, and while it is an easy matter to market any kind of a crop that is scarce and for which there is an excessive demand, it rarely ever occurs that a farm bureau is called upon to market such a crop. The only ones they are asked to find a market for are those that the grower is unable to sell at a profit, and while the organization should be, and probably always is, willing to do everything it can to find a market, it can not always be done. The main feature of the farm bureau meeting and the one of importance, is, to our mind, the getting together of the farmers to talk over their cultural and marketing problems and to hear what others are doing. We often learn as much from others' failures as we do from their successses, and it is this getting together that gives us a broader vision of what is going on around us. The trouble with farmers is that they do not have time to get around and see what their neighbors are doing, and thus get in a rut from which it is oftentimes hard to climb out. These meetings help us to get out of the rut.

## WINS AT PORTLAND

The judging team from the U. of C. was way out in front at the Pacific International Livestock Show at Portland, defeating the University of Idaho, its nearest competitor, by more than 200 points.

Chaffey Union High School team was second (an Idaho team being first) in a contest between 23 high schools from all over the Pacific Slope.

The Interstate commerce commission has announced that it will hold hearings in Washington, D. C., on November 21 on the application of the Southern Pacific Company for permission to continue operating the Central Pacific until such time as the commission completes its hearings on the general railroad consolidation plan.

# California Cultivator

Vol. LIX, No. 20 | Los Angeles, November 11, 1922 | One Dollar Yearly

# Birth Pangs of a New Market

By A. L. Spellmeyer

YES brother, I tell you true, this little part of the big globe is having quite a travail in its livestock circles and the adjustments incident to a new market. A Texas cowpuncher out in the stockyards said: "Spellmeyer, do you think that bank safe in there?" I said: "Sure, those people are O K and square shooters." "Well," he said, "All those fellows have got their hats on, and they looked as if they were ready to go some place."

Nothing is settled yet out at the stockyards, but everything is working towards a settlement, and big things are brewing in livestock circles. It may be methods of California production will be affected for already we have four certainties: a small man market in which he can buy and sell on equal terms with large lot producers; an urge through better price for quality; the meeting of livestock men at a central place; and finally the stimulation of finance and assurance of livestock loans to the small man as well as the large.

When the yards opened I asked the Cultivator to put their veteran Jack Klein on the assignment, and he did it a lot better than I could, but Jack had two handicaps. He hates to criticize anyone and he loves California so much a California raised steer looks just about twice as good as an equal animal from any other place. If Jack was a packer buyer he just naturally couldn't see any other animals than the California raised while any native stock was for sale. Jack thought the Inyo County steers ought to have had the top over the Jackson Hole bunch.

Allowing my evil nature to run riot will state I was amazed and delighted at the operation of the crack salesmen from the Kansas City and Chicago stockyards in handling prospective buyers. I thought I was in a ballroom and felt like a hick grouch from the Black Brush, for honey was not sweeter, a mother's caresses more gentle, nor your manner to the judge that's trying you for breaking a city speed ordinance more respectful, than the way in which buyers were greeted. We have to go some and whip up to compete with all this unction and completely abandon our former ways of selling stock here in the West, for "Hello Bill, what are you trying to steal now" isn't proper language to greet a buyer. Those buyers all look nice, too, in their nice hats and creased trousers and, to be serious for a second, about three or four local killing firms have acted just as nice as they looked, for they have sure played a square game and paid to fair value for what they used.

The finest thing I have seen in the livestock trade in this West took place in the stockyards during the first and second day when certain buyers took their limit in number and price, refused to cut in price offers and the next day came back again and took the cattle they refused to bid on the day before at the same top limit in price. This chivalry was only general however with a few firms, as others did not support the market here as they should if they desire this method of purchasing cattle. Some games were played, but they were not price breaking games but price bucking and stimulation games, of the right kind to make prices healthy and firm. The third day the bargain hunters got in their work on some 4 cent bought fat little Arizona cows and some light steers, etc. The second day only one man was dissatisfied on a small bunch of lambs. It is already indicated that heavy cattle, beef or feeders, will get a good price and a quick market, that good lambs sell fast and good hogs bring good prices. On common cattle and stockers and feeders it's a good market to buy on, a good market for the country killer to buy on, and as prices have been going a poor market for the range producer of light and common cattle to sell on as yet. It may change but the prices so far realized for light cattle are considerably less, figuring expense, than have been paid in the last month or two in the range districts.

What is now isn't what will be, for this entire market birth is like men playing a game of poker, and neither their faces nor their actions indicate the hands held. Money is going to be the ace in the hole for some, and knowledge of Western conditions the ace for others. Personal friendship or first acquaintance has a considerable play now. Later the inevitable will result in "profit" as the controlling motive, be it buyer or seller. It's a buyers market when oversupply rules and a seller's market when it's a case of shortage.

I don't think there is a man in the trade that knows exactly what will result from this new stockyards, for many developments are possible. Those who prophesy failure of any feeder or stocker market here from the indications of the first few days and its dearth of buyers are going to be mistaken, for a great feeder market is a certain development in time, whether it be soon or later. Before it comes some things may have to change but it's sure to come. Failure of any effort backed by the men financing the stockyards has not yet been known, and would not be permitted. Plans or parts of plans may have to be changed, but there is certain to be a regular and permanent market here, though it takes millions and liberal policies to insure general acceptance of the new condition. Money can change livestock killing prices and livestock buying prices and livestock profit margins, and the money is here. Enough money can change the operation of range production. In less than a week of operation a beef market with a considerable bonus for quality is established, and a lamb and hog market is established. The only present defect is the feeder and stocker demand. Thirty more days and the ranges will have winter with them and be unable to ship many cattle. With good luck California will have grass and a growing demand for young cattle, cows and feeders within 90 days, so this feeder and stocker end has after December and until next May plenty of time to shape up and get into the condition of a healthy appetite.

Some steers sold here considerably cheaper than the same yearlings and cows and feeders have been selling at home, and that should attract in the California country buyers. However they sold, and that's more than about 10,000 cattle I know of are doing on the range as they are being held waiting for some buyer and dreading the coming winter. It's a case of lack of reserve winter feed in parts of Texas, New Mexico and northeastern Arizona. However the range districts cannot afford to ship in and sell at such low prices as 3 cents for an 800 pound cow or 5 cents for a 500 pound steer. The California buyer must make known his needs, not in single car lots but by the thousand. Think of a nice little young Arizona cow going at $24 to $32 here or a nice little white face steer 450 pounds at $23 to $25, or a dandy 900 pound white face three year old at $45. The spring is certain of demand on fat beef from 7 to 8 cents on steers, and it's a poor 900 pound steer that won't turn from California grass at 1100 to 1200 pounds. There is attractive profit on these cattle at such prices to make the most pessimistic California range grass man get busy, and especially when he can borrow the money for the operation, if he owns his ranch.

What developments may come we don't know. We may see more packing houses. We may see a division of killing volume. We may see new speculators affecting Southwest cattle value. The California trade is 60 per cent city and 40 per cent country. The 60 per cent city kill is divided with bulk in the plants of small independents or large independents. Carcass prices have been strong and hides are up. If the big killers insist on demanding heavy beef at such prices as 8 to 9 cents for steers, it means that the carcass of that steer must bring around 14 cents. We also have a big cheap meat trade that don't give a blank if the meat comes from a 9 cent fancy steer or a 6 cent Mex if it looks O K, and has enough white fat on it and cuts up.

Almost anything works once in a while, but also anything has some result, just as repeated blows of a little hammer drive in a big spike. What I can't convince myself about, knowing the local meat conditions, is how this 8 cent steer price is going to hold up, if the beef doesn't bring 14 cents or better, and how the steer beef beyond a certain quantity is going to hold up to 14 cents or better when nice little Arizona cows go out at 4 cents and some not half bad steers at 6 cents. That 6 cent steer finds a way into 11 cent carcass beef to a certain trade, competing partially with the same firm who is paying the 8 cents for the steer. It's the same with cows. A firm may go up on 25 head of fancy cows, but beyond that the 6 cent cows mean 12 cent cow beef, and the 4 cent cows mean eating meat at a possible nine cents. It looks to me, purely as an observer, that there is a lot of dynamite in some aspects of this livestock trade at present, and that to safeguard carcass prices a certain volume of light cattle must be taken by the same buyers who take the high priced kinds. It looks as if it might be business to even force up the light cattle to prevent a carcass price bust.

We have now packers buying in the stockyards, packers feeding cattle, and packers contracting cattle on the ranges. We have all the elements of the best market in the United States and an equal possibility of having the worst market, unless a policy with strength and vision is applied and restraint is exercised for the dollar in hand, in order to secure the more numerous dollars in the future.

# Avocado Meeting

By Ernest Braunton

ALL visitors to the last semi-annual meeting of the California Avocado Association were delightfully surprised on two material points. The attendance was far greater than expected. The perfect weather may have had something to do with the number attending, but the enthusiasm manifested leads one to believe that the visitors were true lovers of the avocado and this stimulus added to their loyalty to the association, brought them from all points between Santa Barbara and San Diego.

The other surprise came with the large number of fruits exhibited. It was thought that at this time of the year. when but few except Mexican thin skins can be shown, the display would be very light, but exhibitors were there by dozens and exhibits of varieties by scores. The varieties principally shown may well be illustrated by the well known Puebla, Northrup, Ganter, and Harmon, though a dozen or two of other and newer names appeared on the cards, and there were hundreds of unnamed promising seedlings. Outside of these were some of the larger Guatemalans that are of fair size at this season. The most promising new one was "Linscott," exhibited by E. C. Dutton of Anaheim. This is a round, rough, black Guatemalan of a little more than a pound in weight. When the fruits on display have ripened we may have more to say of it. President Popenoe says the success of this exhibit was largely due to the energy and persistence of Miss McNally, our former secretary.

### The Feast

The feast was a "double header," being both material and mental. After luncheon the audience listened to the program from their table seats. The large dining room of St. Ann's Inn was taxed to the utmost, every chair being filled. The lunch had the usual avocadan introduction, cocktail, salad, "on the half shell," and ended with avocado ice cream.

The program was wonderfully suggestive, also interesting, but that is all. The speakers were all good talkers, told funny stories and kept the audience strained to catch every word but they were up against a "hard deal." All of them were asked to speak to the main question: "How to Make the Avocado Tree Bear," but none knew. All the recommendations were merely suggestions; had they told us "how" our trouble would be at an end. But each phase of the culture was thoroughly discussed: pollination, fertilization, irrigation, cultivation; also popularization. So much of this was of general interest, so much of evidently good advice and of value to the grower, that we shall give much of it in detail in future issues. Dr. A. B. Stout, director of horticultural research, New York Botanic Gardens, was asked to speak on "Pollination to make the Avocado Bear." He said he had been here just long enough to recognize the differences between an avocado tree and a watermelon vine, but if the Californians would solve the problem how to make the trees bear, the New Yorkers would aid in solving the marketing problem.

# Agricultural News Notes of the Pacific Coast

## Northern California

Sutter, Yuba and Colusa Counties will harvest over 50,000 acres of rice.

Annual convention of California Wool Growers at Stockton, November 16-17.

On October 14 there were 17,550 dozen eggs shipped from San Francisco to Hawaii.

Citrus districts expect to begin shipments of oranges between the 15th and 20th of November.

Tehama County has set aside $1500 to be used by women's clubs of Corning and Red Bluff in tree planting.

The proposed apportionment for Lassen Peak national park was thrown out by budget director at Washington.

The state highway commission is being urged to settle before the end of the year on definite route for the Tahoe-Ukiah highway.

Healdsburg district of Sonoma County has finished grape shipping. Many carloads are reported to have been refused because of rain damage.

The first of a series of condemnation suits by Placer County in the interest of the Auburn-Colfax state highway is in the superior court of Sierra County.

Shipment of oranges from Northern California is scheduled to begin about the middle of November says Manager Bidwell of the citrus exchange at Sacramento. Crop is reported generally normal.

A few more weeks of good weather will see the rice crop harvested in Colusa County. 34,000 acres are to be harvested in the county. It is expected average yield will be 25 to 30 sacks to the acre.

Secretary Hagen of the California Cattlemen's Association attended the November 5 meeting of the Stockmen's Protective Association at Livermore in the interests of the association's membership drive.

The railroad commission has denied application of the Southern Pacific and other rail carriers for rehearing of the so-called rice cases in which the commission fixed rates on paddy rice, carload shipments.

A transbay bridge north of Dunbarton Point and a new peninsular highway connecting San Francisco with Palo Alto have been decided on as part of the construction program of the joint highway district No. 2.

Farm center meetings in Glenn County at Codora, November 13; Capay, 15; Plaza, 17; Grapevine, 22; Glenn, 24. Farm home department meetings at Jacinto, November 8; Ord, 9; Westside, 16; Grapevine, 17; Lake, 28.

Farm bureau meetings for Tehama County are: Johnson-Reeds Creek, November 13; Red Bank, 15; Bend, 17; El Camino, 20; Stanford, 22; Flournoy, 24; Bowman, 25; Richfield, 27; directors meeting, 9 a. m., November 25, Red Bluff.

Home department meetings of the Tehama County farm bureau will be held at Antelope November 14; Richfield-El Camino, 15; Dairyville, 16; North Capay, 17; Vina, 21; Squaw Hill, 22; Flournoy, 23; Reeds Creek-Red Bank, 24; County Committee Meeting, 25; Bowman, 28.

## Central California

The Stanislaus County farm bureau is starting drive for membership.

Porterville expects to make first shipment of oranges about the middle of November.

Horticultural Commissioner Brann estimates Tulare County's orange crop for the coming year at between 38,000 and 40,000 cars.

The Oakdale warehouse of the Almond Growers Association will close about November 10. Receipts are double those of last year.

The plant of the Universal Milk Company at Salida, Stanislaus County, was reopened November 1. Condensed and evaporated milk will be produced.

The Merced-Stanislaus Sweet Potato Growers Association is still carrying on its campaign for membership. Ten carloads of sweets are being shipped daily from Turlock.

During the year ending September 30, 100,506 people visited Yosemite national park. The largest day's travel was on July 2 when 2,263 people entered the park.

Agents and officials of the farm bureaus of the state were guests of the Sun-Maid Raisin Growers at Fresno, October 26, for a day of intensive study of the raisin industry.

Chambers of commerce and other civic bodies of the southern part of the San Joaquin Valley will ask congress for financial aid for Sequoia and General Grant reserves.

At a recent meeting at Madera organization was perfected for securing signatures to petition for formation of the San Joaquin River water storage district in Madera County.

Standardization of grapes and oranges was discussed at a recent meeting of the Lindsay chamber of commerce. Horticultural Commissioner Brann was the principal speaker.

A cockerel auction sale is to be held at Tulare on November 22. Several birds consigned by Oregon and Washington poultrymen as well as by poultrymen from all parts of California.

Contract has been let for laying 365,000 feet of concrete pipe for the state land settlement at Delhi. This is for the fourth unit three miles east of Delhi at Ballico. The new line will irrigate 2300 acres.

The California Prune and Apricot Growers Association has found such heavy demand for two pound cartons in large, medium and small sizes that most of the remaining stock of the 1922 crop will be put up in this form.

F. C. Hoover of the interstate commerce commission is in Fresno conferring with growers and shippers as to securing adequate car equipment for transporting grapes next year. Shortage is becoming more acute as Northwestern apple crop goes forward.

Monterey County Water Company, which distributes water for irrigation purposes in Salinas Valley, was today authorized by the railroad commission to increase its charges for water from $1.50 per acre for each irrigation to $2. This rate will be collected from all consumers including those who have special agreements with the company providing for a rate of $1.50.

## Southern California

Imperial Valley reports barley coming up nicely.

Opening day of Chino's community fair brought out 2,000 visitors.

The California Avocado Growers met at Santa Ana, November 4.

Larger acreage is being planted to barley this year than last in Imperial Valley.

The Ladera irrigation district has been formed at Elsinore. It includes 4500 acres.

The one man farm for Imperial Valley is still being put forward by the Brawley News.

Imperial Valley Cotton Pageant closed today at Calexico after a week of celebration.

Rawson Brothers of Riverside County harvested 135 tons of honey from 2,000 colonies.

The Saticoy district in Ventura County will ship 3000 tons of walnuts through the association.

The Imperial County cow testing association is assured. More than 1200 cows have been signed up.

Beekeepers of Southern Cailifornia held a two day session at Exposition Park, Los Angeles, November 3 and 4.

Yucaipa apple growers report that late varieties are running to very high grade of fruit. Practically all the crop is picked.

Farm management schools will be held by the agricultural extension service in Hemet, Riverside, Corona and Elsinore about the middle of December.

A tractor school is announced for Los Angeles County the week of January 15-20. Arrangements for attending may be made with office of farm adviser.

Manager French of the Deglet Noor Date Association at Indio reports shipment of two tons of dates daily. The Coachella date packing house is now open and making shipments.

The Upland Lemon Growers Association distributed to members $417,754.23 for the year ending August 31. A total of 321,769 picking boxes of lemons was received at the packing house. 409 carloads were shipped.

The Riverside County supervisors have authorized issuance of $371,378.50 in bonds on the Palo Verde joint levee district for the construction of levees destroyed during the flood of last winer and for other flood protection work, including the straightening of the channel of the Colorado River.

An all day institute of deciduous fruit growers of Los Angeles County was held at Van Nuys last Thursday. Twenty-five boys in the county pig feeding contest sold their pigs, which they had been feeding for the past three and one-half months, at the Los Angeles Union Stockyards on its opening day, November 1.

The state market commission is cooperating with growers of Imperial Valley in endeavor to secure better marketing of next season's crops. Mr. Bigelow of the commission is conducting membership campaign of the Imperial Valley Vegetable and Melon Growers' Association and is directing the efforts of the officials of the growers' organization.

## The Coast and General

A coffee and cocoa exposition will be held at Caracas, Venezuela, December 9-January 7.

The Brazilian coffee crop will be the largest since 1915, between seven and eight million bags.

Much heat damaged grain showed up in early thrashed wheat in the hard winter wheat area.

Winter peas have a good start in Yuma section of Arizona and some grapefruit are being shipped.

Walnut crop of China is larger than last year. Exporting began from Tientsin, October 10. Trees are seedlings.

Nampa, Idaho, ships out an average of 200 carloads of farm and orchard products. Apples now comprise half the shipments.

Fruit and berry growers of Lewis and adjoining counties of Washington are making plans for formation of a marketing organization.

According to a French decree which went into effect September 1, 1922, all of the grain except bran and refuse kernels must be used in the preparation of flour for human consumption.

Cotton picking has been delayed by rains in Georgia, Alabama and South Carolina. Picking is nearly completed in Louisiana, Mississippi, Oklahoma and Texas. Texas will have no top crop this season.

The first freeze of the season was recorded by the government weather bureau at Twin Falls, Idaho, on September 28. This is two or three weeks later than frost visited many sections of southern Idaho.

Fifty thousand pelts, mainly from Alaska and Siberia, were sold at Tacoma recently at the regular fur auction and buyers from various parts of the country—and one from Germany—paid $150.000 for the lot.

Perhaps the greatest use for prunes to the Rumanian is in making zweeka, an alcoholic beverage containing about 15 per cent alcohol. This is very much liked by the Rumanians and takes the place of whisky in that country.

All honey coming into the United States from foreign countries now carries an import duty of 3 cents per pound. This supplants the import duty of 10 cents per gallon which had been in effect since the enactment of the 1913 tariff bill.

Head lettuce from Idaho Falls is being shipped daily by express to Ogden and Salt Lake. Starting with a few crates as a sample, producers at Idaho Falls have increased their shipments to a large number of crates daily and the demand is showing a steady growth.

In Arizona, honey sales from the small mesquite crop reported at 7½ to 8 1/3 cents per pound. Crop from cotton now filling up hives for winter. Beekeepers generally inclined to hold alfalfa and cotton honey but several carlot sales reported at 5¾ to 6 cents per pound.

The Southern Pacific announces that as a means of aiding livestock raisers affected by drouth in New Mexico and Texas, it has applied to the interstate commerce commission for permission to establish on one day's notice temporary reductions of 50 per cent on livestock feed shipped from the Imperial, Salt River and Gila Valleys.

# Functions of the Agricultural College

By C. B. Hutchinson, Director Davis Branch
University of California College of Agriculture

(At the recent dedication of the horticultural and dairy buildings at Davis C. P. Hutchinson, the new director of the branch of the college of agriculture at the university farm, was scheduled for the closing address. Prof. Hutchinson only recently came to California from Cornell, and attendants at the dedicatory services were anxious to hear his idea of "Functions of An Agricultural College." Owing to the lateness of the hour the speaker simply expressed his appreciation of the great interest shown by the farmers of California in coming in such large numbers to dedicate the two new buildings; also appreciation of the fact that California voters had provided so liberally for more effective work by the institution. Naturally it is Prof. Hutchinson's ambition to join to the fullest in the making of a great educational force of the college of agriculture, University of California. Fortunately the speech was in manuscript form and is here quoted from as liberally as space permits.—Ed)

WE are met today to dedicate to the cause of agricultural education these two buildings recently provided by the people of California in order that the young men and young women of this state who desire technical training for agricultural pursuits or who desire an agricultural education of the highest type may find in this college adequate facilities for the realization of their ambitions.

It has seemed to me proper on this occasion, when we are rejoicing in this new evidence of the growth and development of the college, that we should direct our attention to the purpose of an institution such as ours and inquire of the functions it has to perform.

During the last half century we have developed in America the greatest system of agricultural education the world has ever known. It had its beginning in what has been called the land grant act of congress in 1862, when under the leadership of Senator Morrill legislation was enacted providing for the establishment of a college of agriculture and mechanic arts in each of the several states and territories and setting aside certain areas of the public domain, the proceeds from the sale of which were to be used for their support. This was the first step in national or federal support for a nation wide system of higher education and had for its purpose, as Senator Morrill himself has so wisely said, "the liberal education of the industrial classes."

For a quarter of a century the teaching function of these colleges was paramount. Then came the realization of the necessity of some provision for securing new sources of knowledge. Accordingly the system was strengthened by the establishment of the agricultural experiment stations as departments of the agricultural colleges under the provision of the so-called Hatch Act in 1887. Under this act the agricultural experiment stations were charged with the duties of conducting original researches into various phenomena relating to and bearing directly upon the agricultural industry of the nation. The original act carried an appropriation from the United States treasury of $15,000 annually to each experiment station. This federal support was further increased in 1906 by the Adams act bringing the total federal funds annually accruing to each station for investigational work up to $30,000.

The next step in the development of our national system of agricultural education came in 1914 with the Smith-Lever act providing federal aid for agricultural extension. This was followed almost immediately by the Smith-Hughes act making possible the development of secondary vocational education on the same nation wide basis. In the meantime the respective states have by legislative action increased the support of the colleges until today the amount of public funds expended for agricultural education in several states reaches well into the millions.

It is evident, therefore, that the college of agriculture has by legislative action a three fold function to perform. These functions may be said to be—(1) to give vocational and professional training to those who come to the campus for such instruction; (2) to disseminate knowledge among the people of the state regarding the science and art of agriculture, and (3) to provide for research and investigations into various agricultural and related phenomena. No college can attain the greatest success nor render the greatest service to the state which does not have adequate support for all three lines of endeavor. I am only pointing out what is common knowledge when I say that in many instances the funds provided for original and fundamental investigations have not kept pace with those devoted to the other two functions of the college and are in no way commensurate with the needs of the nation. A bill is now pending in congress providing for further federal support for agricultural research which is designed to place this phase of the college's work upon a more adequate basis. In the meantime the college administration can adjust this inequality from state appropriations by utilizing the machinery of the agricultural extension service for the accumulation of useful information relating to farm practices which prior to the development of the extension service the experiment station was called upon to do.

The research work of the college of agriculture, like that of the medical college, is the basis for resident instruction and extension teaching. No college or division of the college can function properly, give the best of instruction to its students either on the campus or in the farm, which is not also engaged in building up the store of knowledge relating to its field. The greatest difficulty which the teachers of agriculture in the early days had to face was the lack of subject matter upon which to base their instruction. It was only when this deficiency was recognized and research made a function of the college that agriculture was put upon the proper pedagogical basis. I fear that even today in our rapid development we sometimes attempt instruction and even extension in certain new fields before an adequate subject matter has been developed. For that reason I am unable to agree with those who would segregate the three lines of endeavor by providing separate staffs for research, resident instruction and extension. The division is the unit.

(Continued on Page 515)

# Better Peaches

WE are just in receipt of a circular letter which the California Canning Peach Growers is mailing to all members. This should be of interest to all growers of canning peaches since it shows the loss to which they are subject where small inferior fruit is grown. We have often heard growers complain that the canneries were too particular, many, no doubt, failing to see why a ton of peaches was not a ton of peaches regardless of size and forgetting that canned goods, like everything else, sell largely on appearance.

We are sorry that a lack of space prevents us from printing the entire letter, but we give below the essential paragraphs and trust that all those interested will take heed and lend their best efforts to produce better peaches and thus not only better their own financial condition but uphold the reputation of California as a producer of the best canning peaches that can be grown.

The circular says: "The peaches of this season as a whole have been more or less of a disappointment both as to size and quality." A very large percentage of the No. 1 grade were barely within that grade and often natural shrinkage necessitated their being placed in the No. 2 grade.

"On account of the peaches running so heavily to small sizes, canners have been obliged to pack an enormous amount of low grade peaches much in excess of market requirements and in some instances in order to move their excess canners have sold their low grades below the cost of manufacturing.

"The cost of packing small peaches is very much greater than the cost of packing the larger sizes. Large amounts of small fruit will reduce the capacity of a cannery in some instances as much as 50 per cent, thereby adding greatly to the overhead costs. Secondly, cutters and pitters have to be paid double rates to pit the small peaches, and if there is a large amount of small fruit to handle the pitters become disgruntled and in some cases refuse to handle small fruit.

"California enjoys almost world wide monopoly on high grade canned cling peaches, and the demand is ever increasing, whereas with our low grades the conditions are just the reverse. We come into competition with low grade cling peaches in all quarters of the globe, and with the trade demanding quality fruit it is getting more difficult each year to dispose of the large amount of low grade, as the trade will only absorb a limited amount except at an extremely low figure.

"While we, in California are producing practically all of the high grade cling peaches grown, we must not lose sight of the fact that there have been very extensive plantings of cling peaches in foreign countries recently; namely, Australia, South America and Africa. While they have not as yet met with any large degree of success in these countries, with persistent efforts and proper education along growing and canning lines, they may some day be our serious competitors, especially in the foreign markets, so it behooves every canning peach grower to grow better and larger peaches.

"We believe all are agreed that with present land values and the increased cost of production, peaches cannot be grown profitably at prices that prevailed prior to the world war. In order that growers may receive a fair profit on their investment, peaches must sell at a fairly good figure, and in order to receive good prices for their peaches, we must deliver better fruit.

"By producing and delivering peaches of large size and high quality we will be able to get good fair prices for our fruit year after year. The canners would be very willing to pay good prices for quality fruit and the trade would be supplied with what they want.

"It has always been an established fact that the growing of small undersized peaches has never been profitable. In the first place, should the deliveries run heavily to small sizes of which a large portion would be classed as No. 2's, the grower would only receive half as much for his No. 2's as his No. 1's, and should the grower have an amount of No. 2's in excess of 10 per cent, he would not be able to dispose of the excess amount at any price, which was the case in many instances this year. Secondly, a crop running heavy to small sizes will greatly reduce the tonnage, also trees that are overloaded with a lot of small peaches which cannot be properly developed are weakened to such an extent that they will only produce a small crop the following year.

"During the past few years there have not been enough peaches to supply the demand, and in some instances new canners just entering the field, in order to secure their supplies, have accepted a large amount of small fruit. However, with the new large acreages coming into bearing each year, conditions are changing, and the time is not far distant when it will be extremely difficult for the grower who persists in producing small peaches to find a canner to take his crop.

"It takes 198 peaches two inches in diameter to equal 100 peaches 2½ inches in diameter to equal one peach it takes approximately two peaches 2 inches in diameter to eaqual one peach 2½ inches in diameter. It takes 337 peaches 2 inches in diameter to equal 100 peaches 3 inches in diameter, or approximately three and one-third peaches 2 inches in diameter to equal one peach 3 inches in diameter. These figures certainly should prove to the grower beyond any question of a doubt, which is the most profitable, and while it would not be practical to produce all 3 inch peaches, yet every grower should exert every possible effort and strive to produce 3 inch peaches. By growing and delivering large peaches growers would get consistently larger crops from their orchards year after year and would receive maximum financial returns."

As a result of these conditions and to maintain California's reputation for high grade canned peaches the California Canning Peach Growers has adopted a higher standard for the No. 1 and 2 grades. The No. 1 must not be less than 2⅜ inches in diameter and the No. 2 not less than 2⅛ inches, and the maximum amount of No. 2 peaches that canners are required to accept would be 10 per cent of the tonnage produced from each orchard. They state that these changes will be effective for the season of 1923.

These changes may seem a little hard on the grower but he must take into consideration the fact that the increased acreage coming into bearing makes competition more keen and in order to grow peaches at a profit he must exert every effort to produce the best, remembering that it is the tonnage of No. 1 peaches that pays a profit and that the culls are not only a dead loss but materially assist in reducing the tonnage of good fruit.

In the future good care and proper thinning of the fruit is going to spell the difference between profit and loss to the peach growers.

# Vegetable Garden for November in Southern California

By D. F. Reichard

THIS is as truly garden cleaning time as April is house cleaning time. Deciduous trees, shrubs and berries should be pruned and thinned out. The dead wood ought to be removed from citrus trees. Corn, squash and sweet potatoes should be harvested and stored or disposed of before deterioration starts.

All plants from which crops have been harvested, if not infested with disease or pests, may be put into the compost heap or turned under for fertilizer. All infested prunings or litter should be burned. Fumigating or spraying of infested trees or shrubs at this time destroys the insects and fungi as they are growing into winter form. These precautions about cleaning up go a long way toward controlling pests and diseases next spring.

Unless your corn was planted late it is dry enough to shell and sack. In this condition it can either be sold or stored. Squash and pumpkins should be brought in and put under shelter before they are frosted. If it is necessary to pile these be careful not to bruise or scratch them and see that all imperfect ones are thrown out for immediate use or sale according to their condition. One bad squash or pumpkin will soon infect a large portion of the pile. Sweet potatoes must be dug before frost to retain their flavor and keeping qualities. If only a small quantity are to be put away select clean, firm tubers, wrapping each one separately in one thickness of newspaper and pack in boxes or pack in dry sand in boxes so that the tubers do not touch each other. To store in large quantities, stack in a convenient place, alternating layers of sand and potatoes, then cover the whole to keep the rain out. The important thing about keeping sweet potatoes is to keep them dry.

This is the month to begin planning what you are going to plant next year and where and when it will be planted. On all ground not now occupied with crops and around trees and shrubs liberal dressings of barnyard manure should be applied to be leached into the soil by the rains. When there has been enough moisture to wet down two or three feet the ground should be worked at least a foot deep. Be sure to get the manure well turned under.

During these cool months it is not advisable to plant any of the tender summer vegetables such as beans, tomatoes, squash and corn. The hardy vegetables require a month or two more to mature at this season of the year than in the late spring and summer.

For early spring and continuous use plant in soil prepared as suggested in last month's Cultivator the following: Egyptian beets, Half Long carrots, Purple Top and Snowball turnips, early and winter radishes, Wonderful lettuce, Amsterdam Giant spinach, kohlrabi, onions, seeds and sets, salsify and Laxtonian or dwarf peas. Set out plants of cabbage and cauliflower, kale and Swiss chard, horseradish, asparagus and rhubarb.

When planting seeds sow in rows about 20 inches apart so as to allow for irrigating and cultivating. The plants should be set farther apart to allow for top growth.

It is time now to be thinking of the hot bed for tender stuff for early spring planting. It takes over two months to grow tomatoes, peppers and eggplant to a size for planting out.

## FROST AND FIG TREES

By Ira J. Condit

(Continued from Last Week)

Varieties of figs differ considerably in vigor of growth. The Kadota is notably vigorous. It therefore shows vigorous recovery from frost damage. The Brunswick is a slow, straggling grower and is seldom injured by frost.

### Pruning

Heavy frost damage to young fig trees has an effect similar to that of heavy pruning, namely, a vigorous growth of suckers and sprouts. In sections having a high water table late growth of the suckers continues so that they are frequently pruned down to the ground by frost for several successive seasons. Many growers have given up hope of getting a young fig orchard established under such conditions.

Heavy cutting of the tops of young trees with the pruning shears may induce a vigorous succulent growth more susceptible to early fall frost injury. In the only pruning experiment where observations on frost damage have been made the long or lightly pruned trees suffered less from winter injury than those short or heavily pruned.

### Protection Against Frost

As far as the writer's observations have gone there is only one fig orchard in California in which orchard heaters or smudge pots have been used. This is an orchard in the Sacramento Valley where spring frosts have been of sufficiently frequent occurrence to seriously injure bearing trees. Lard pail type heaters were used for several seasons in an attempt to protect the trees from such frost damage. In most fig sections serious injury from spring frosts is of such rare occurrence that an investment in efficient orchard heaters would hardly seem justified although some growers of vineyards are seriously considering this form of frost insurance. The installation of orchard heaters among groups of caprifig trees might prove of commercial value in protecting the mamme crop in late fall and winter and the profichi figs in early spring.

### Covering Trees

The covering of any large number of young trees in orchard form as a means of frost protection is probably impracticable. Small trees may be covered readily with drying trays set on edge around and over the tree. Large caprifig trees have in many cases been protected during the winter by shelters constructed of permanent corner posts and crosspieces and removable tops of palm leaves, burlap, or other available material. No records are available of the efficiency of such shelters although they should give a measure of protection if properly constructed.

### Wrapping Trees

The practice of wrapping young fig trees as a means of frost protection has become very common especially in some districts. The principal materials used have been cornstalks grown between the tree rows, tules from nearby swamps, bean straw, burlap and paper. In most cases cornstalks have provided excellent protection if placed before the earliest killing frost, if enough are used, and if tied firmly together to prevent free movement of air. In the Merced section in 1921 cornstalks were tied around fig trees as early as October 15 while leaves were still green and functioning. Such smothering of green foliage apparently had no ill effects upon the trees according to examination made the following spring. Cases of serious frost injury occurring in spite of cornstalk wrappings generally show that the wrapping was done after the first killing frost, insufficient material was used, or large air spaces left to the trunk or branches. Loose dirt thrown around the bases of the cornstalk will help to keep them in place. Where the corn is grown between the tree rows or is available from nearby fields, wrapping of one, two, or in some cases, three year old trees is a simple and efficient form of frost insurance. The cornstalks are removed whenever the buds begin to push out in the spring. On account of their beneficial effect upon the soil, the growing of beans between the rows and the use of the bean straw for wrapping trees is to be recommended.

### Whitewashing

Whitewashing of the tree trunks and main branches of fig trees is practiced as a prevention of sunscald rather than frost injury. The lighter the color of the bark, the less is the absorption of heat and the more uniform the day and night temperature of the bark. Since sunscald occurs mainly in winter while the trees are leafless, protection should be given during that period to any trees that have a trunk exposure of more than 16 inches. Low headed trees, that is, with main branches starting within a foot or 16 inches from the ground, are seldom, if ever, injured by sunscald.

Whitewash for winter use must be durable and not readily washed off by rains. Various materials such as glue, milk or flour are sometimes added to make it more lasting. The following formula is recommended by Wickson: "Dissolve five pounds of salt in six gallons of hot water and use this to slake 30 pounds of lime, stirring in 4 pounds of cheap tallow (or heavy oil or any other old grease) while the lime is still hot from slacking. Add water to the consistency desired."

(Continued Next Week)

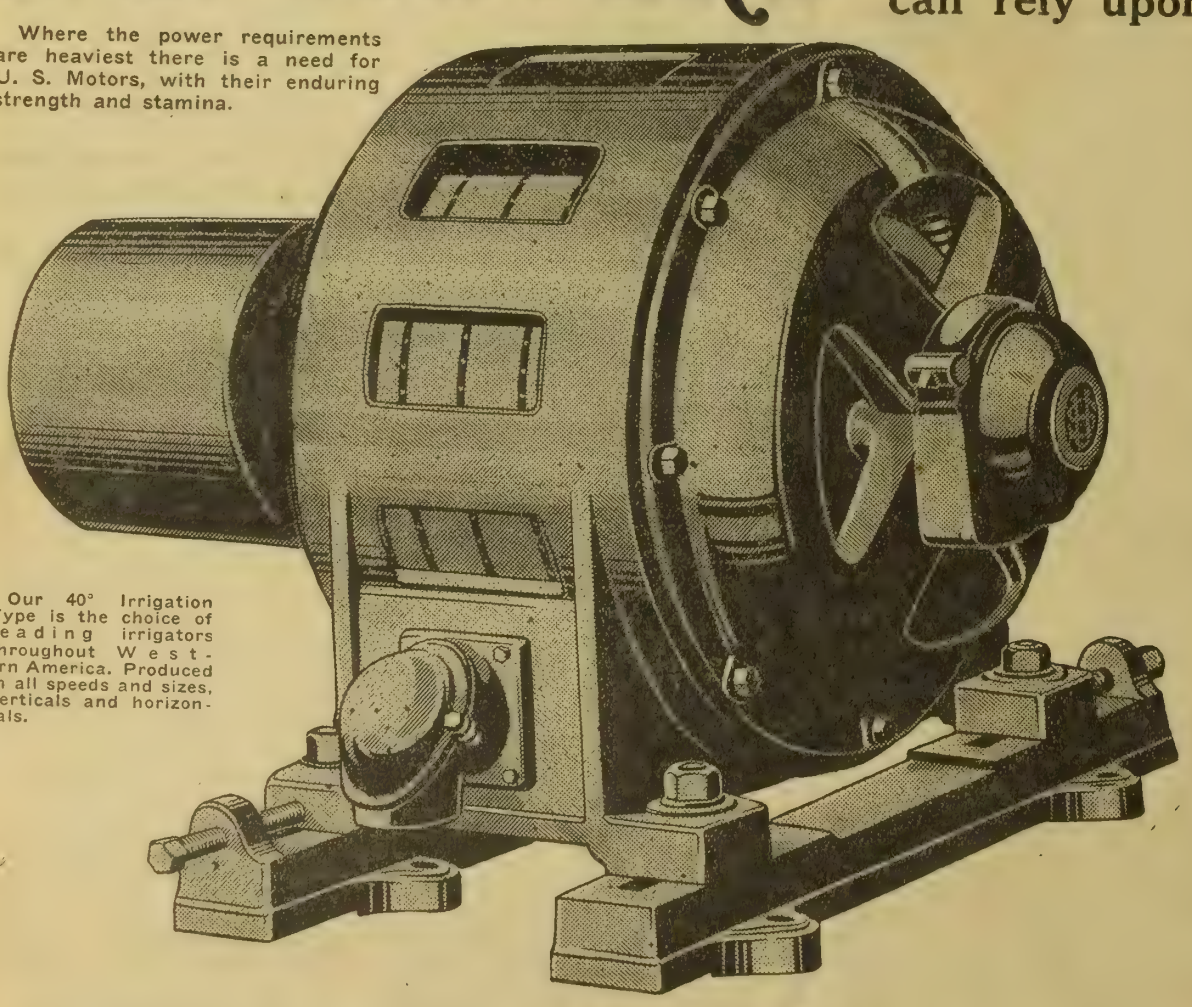
## ANNUAL OF FARM BUREAU FEDERATION

At the annual meeting of the California farm bureau federation held at Berkeley last week A. C. Hardison of Santa Paula was elected president. Secretary Bryant of the federation sends wire regarding the new president and his qualifications in which he says:

"A. C. Hardison, a very extensive rancher at Santa Paula, Ventura County, was today elected president of the California Farm Bureau Federation with headquarters at the University of California, Berkeley. The farm bureau is the largest agricultural organization in America today and in California there are more than 25,000 farmers active members of the organization.

U. S. MOTORS—power that you can rely upon

Where the power requirements are heaviest there is a need for U. S. Motors, with their enduring strength and stamina.



Our 40° Irrigation Type is the choice of leading irrigators throughout Western America. Produced in all speeds and sizes, verticals and horizontals.

**Raise Elec-Chic Hatched Chicks For Profit**

ELEC-CHIC Hatched Chicks are Better Chicks.

We supply them in all the popular breeds and can assure you of prompt deliveries on the dates specified.

These chicks are being marketed by our sales department for cooperative ELEC-CHIC Hatcheries. Each chick is hatched in an automatically controlled ELEC-CHIC incubator, which assures highest vitality, perfect health and rapid development. They come from pure-bred, free range parent stock who have lived all their lives on the farm with plenty of green feeds and exercise.

Start now with ELEC-CHIC hatched chicks, so that you may secure highest prices for them in the spring when they are broilers and fryers. For prices and delivery dates.

When Writing Advertisers Please Mention Cultivator.

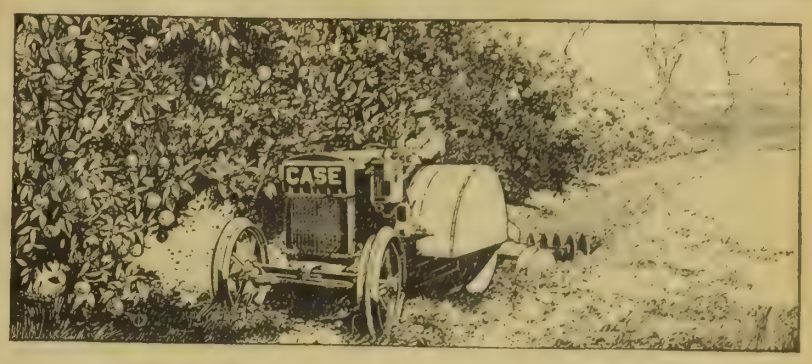
"Mr. Hardison was born and raised on a farm at Caribou, Aroostook County, Maine, where he received his early training in agriculture. He was educated in the common schools of Maine and in 1890 graduated from the University of Maine in a civil engineering course. This same year he came to Ventura County where he has been located ever since. He immediately took up the practice of civil engineering and a year later, in 1891, was one of the seven original incorporators of the famous Limoneira Company which is now the largest lemon producing grove in the world.

"He has been actively connected with and a director of the company ever since its incorporation. He is also a director and engineer in two water companies in Ventura County.

"In 1896 he went to South America on an engineering project and has engaged as assistant engineer of the Inca Mining Company of Piru where he remained until 1901. During a portion of this time he also acted as assistant manager of this company. Immediately after his return to the States in 1901 he managed a mine in Arizona. For a year from 1902-1904 he was engaged in private engineering practice. Mr. Hardison was also engaged in the oil business in Kansas and Indian Territory from 1904-1907, at which time he returned to California and became actively connected with the Limoneira Company. In 1911 he organized the Hardison Ranch Company and San Cayetano Mutual Water Company and as vice president and manager of this company is developing 250 acres of citrus land near Santa Paula. Since 1912 he has been a director of the Santa Paula Citrus Fruit Association, shipping 700 cars annually, and since 1919 has been vice president of this association. Since 1913 he has been a director of M. I. P. U. Citrus Association which ships 150 cars of oranges annually. He has been vice president of this company since 1917. From 1914 to 1917 he was chairman of the Ventura County highway commission which built 104 miles concrete highway expending about $1,250,000. In 1922 he was appointed by the governor a member of commission on agricultural education to succeed the late G. Harold Powell. He was elected chairman of this commission and has just returned from an extensive tour of the agricultural colleges throughout the East and Middle West investigating the general problems of agricultural education. He has actively worked with the farm bureau since it was organized in Ventura County and knows farm bureau work thoroughly.

A. C. Hardison

"As cooperative marketing is one of the great problems before the farm bureau this organization is exceedingly fortunate in getting Mr. Hardison at its head at this time. He is considered one of the ablest authorities on cooperative marketing in California and this, together with his natural leadership, will make him a great president for the California Farm Bureau Federation.



**BETTER** POWER WORK FRUIT PROFITS

*BECAUSE* dependable power is absolutely necessary for the frequent, thorough cultivations demanded by the best orchard practice—
*BECAUSE* the economy that gets the work done at the lowest possible cost is appreciated by orchard owners—
*BECAUSE* of durability that enables the owner to use his tractor for many years—
*BECAUSE* by short turning and flexible steering the operator has complete control of the tractor and implements even in crowded orchards—

**CASE FARM TRACTORS**

**are being used more and more in well-managed, profitable orchards. Ask any Case tractor owner.**

*Dependable power* is furnished by Case-built engines of most efficient type—four cylinder vertical, valve in head, with well balanced parts, designed for continuous operation under heavy loads.

*Fuel economy* is secured with a simple, single adjustment carburetor and a specially designed manifold with heat control for the successful use of low grade fuels.

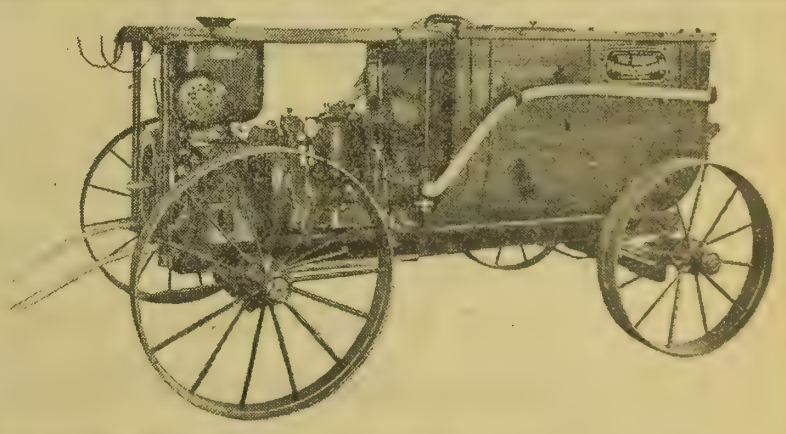
*Durability* is assured by the use of special steels, high grade roller and ball bearings, by careful attention to lubrication, by enclosing all working parts so that dust and dirt cannot enter. All bearings are replaceable and all working parts easily accessible for adjustment.

Thus Case tractors, wherever used, prove themselves practical and profitable in orchard work. Complete information about sturdy Case tractors is contained in our new book "Better Farming with Better Tractors," just off the press. Write for a copy today.

**J. I. Case Threshing Machine Company**
*(Established 1842)*
Dept. Y4 Racine Wisconsin

BRANCH HOUSES at Los Angeles and San Francisco, Calif., Portland, Ore., Spokane, Wash.

*NOTE: Our plows and harrows are NOT the Case plows and harrows made by the J. I. Case Plow Works Company.*



**Nothing Is So Interesting As Progress**

The Hardie organization is both conservative and progressive—in other words—it is well balanced. We never seek to trade on a reputation by making false or extravagant claims for our product. We never seek to add untried new features and have their worth determined at the grower's expense. In these two things we are conservative.

The Hardie sprayers have earned their place in the fruit growing world by merit—by making good.

The assurance of effective spraying, mechanical superiority, economical operation and steady day by day performance, given by the Hardie sprayers make their purchase both a safe and profitable investment for any fruit grower.

A sprayer for every spraying purpose. Write today for the big spray Catalogue.

**The Hardie Mfg. Company**

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Woolly Aphis on Apples

Please tell me something about controlling woolly aphis on apple trees.—Subscriber, Salinas.

Woolly aphis can be kept under control by spraying with any of the good contact sprays. In most sections it is held in check fairly well by its natural enemies. The root form of this aphis can best be controlled by the use of tobacco dust placed around the roots in the fall before the winter rains commence. Remove the earth from the roots to a depth of four to six inches, making a circle around the tree of four to five feet. Distribute three pounds of tobacco dust in this space and replace the earth. The rains will carry this down around the roots and saturate the soil about the tree with nicotine which will kill all aphis present and prevent others from entering.

### Apricots in Poor Condition

I am enclosing samples from an apricot tree. Can you tell me what the trouble is and whether anything can be done for it now or later. No. 1 is from the west side of the tree where three large limbs are all this way with no green leaves left. No. 2 is from the same except more inside, and the buds seem to be alive though the leaves are all gone. No. 3 is from the east side of the same tree and shows no trouble.—E. M. S., Santa Anita.

This question was referred to Assistant County Agent Blanchard of Los Angeles County and he answers:

"Although it is difficult to definitely determine the specific cause of the poor condition of your apricot tree from the samples sent, the conditions are so similar in so many trees with which we come in contact that I may be able to throw some light on the cause of the trouble. One of your samples indicated that one limb on one side of your tree has but few leaves left, indicating too early dormancy. Another sample shows that the leaves are also gone but the buds are in fairly good condition, while a third indicates that the leaves are in good condition at the present time. That is really typical of many trees with which we come in contact. Something has happened to the root system. The most frequent trouble with which we have come in contact this past season is dry sub-soils. The uneven condition of the top of the tree is easily explained in that the roots on the various sides of the trees were weakened irregularly. Perhaps the roots on the side of the tree where the leaves are still on were able to obtain moisture for a greater period of time than those on the other sides, enabling that side of the tree to function more normally. We have found in making numerous soil borings that the soils generally are dry at this time and in fact have been dry for the past few months. The only solution is to maintain an adequate amount of soil moisture at all times and not let the tree become dormant prematurely. Ordinarily the "backyard" farmer does not irrigate a great enough area for each individual tree. The root systems spread out much farther than the drip of the tree and that area should be irrigated as well as immediately under the tree. I would suggest making a large basin by pulling up the soil into a bank for a radius of several feet beyond the drip of the tree. Fill this basin a sufficient number of times to obtain a penetration of four to five feet at least, depending upon the character of the soil. Of course your particular tree has been weakened and it may possibly be that it will not respond very well this coming season. A season's growth is influenced by the previous season's growth so your efforts must be confined towards improving the tree this coming season."

### Profitable Crop

After reading your article in the Cultivator of October 28 I want to ask a question. What is the best crop or crops to grow on a 2½ acre ranch for an income or profit? The soil here is decomposed granite which I am told is one of the best. Would you suggest vegetables or fruit? I prefer fruit.—Subscriber, Arlington.

The most difficult problem any of us have to answer is what to plant that will return a reasonable profit. Every farmer is watching for the best crop to plant with the result that what may now seem to promise a profit quite often turns out to be decidedly overdone when the crop is ready for market. For the small acreage berries seem to offer the best returns. However, one should be fairly close to a good market and also be prepared to devote close attention and plenty of hard work to the undertaking. The main thing in planting berries or any other crop is to select the very best variety available and then by close attention produce a better quality of fruit or vegetable than competitors are putting out. No matter how plentiful a product may be there is always a demand for that which is above the average in quality and appearance.

### Airplanes Frighten Chickens

Kindly let me know if I have any protection against airplanes flying over place in making landing. We have established paying poultry plant after spending a lot of money and putting in a lot of hard work. About two months ago the field across the road became an aerial field. Planes fly low over poultry. Several hens died of fright and pullets have dropped from seven dozen to 14 eggs per day. Must I be forced out of business and lose my investment?—Subscriber, San Jose.

There are laws defining the height at which aircraft must travel, but whether or not they would be applicable in your case we are unable to say. It would seem that there ought to be some remedy and we would suggest that you take the matter up with your district attorney.

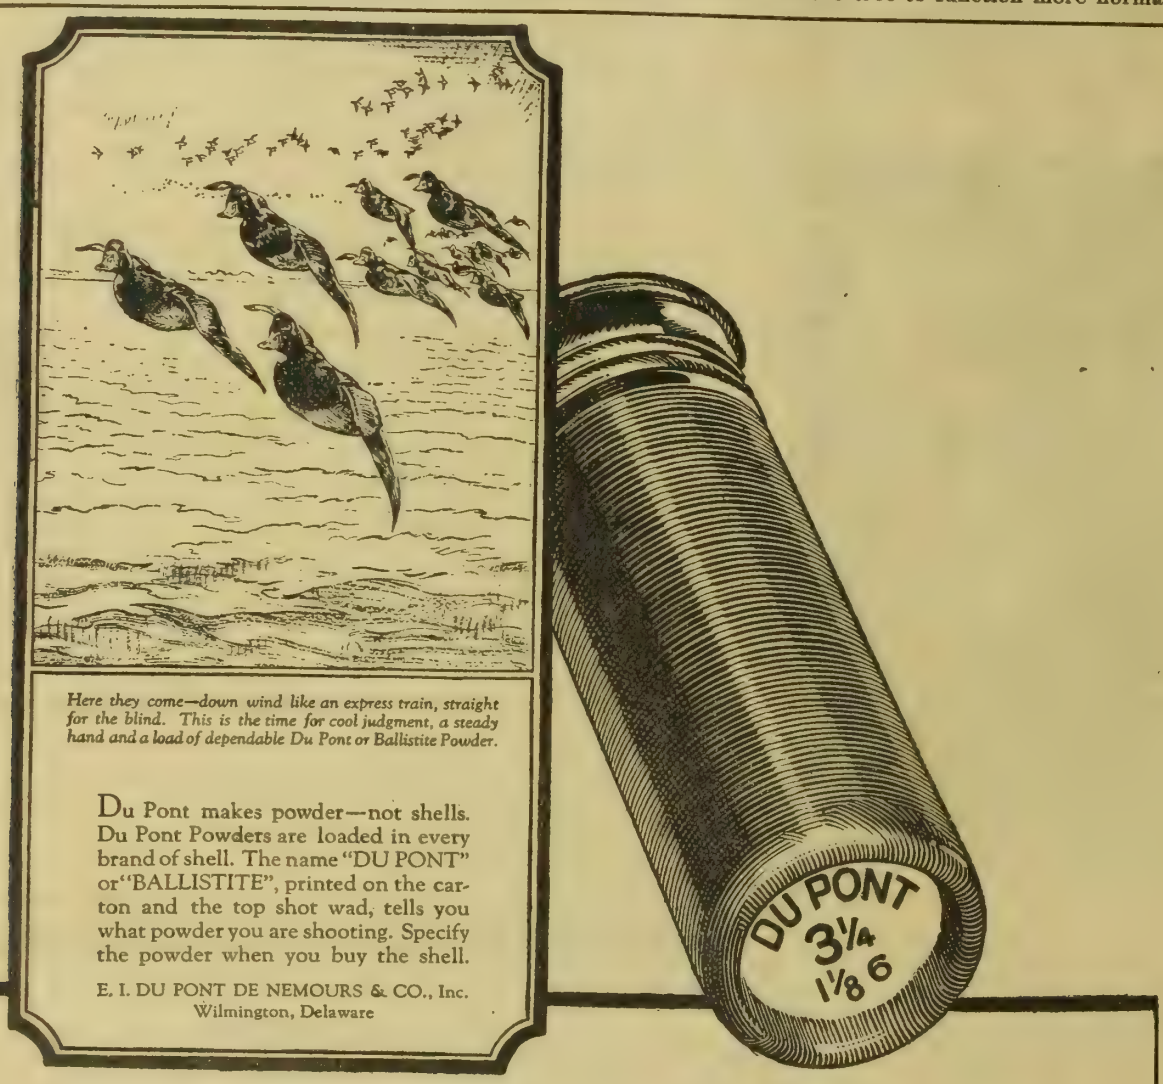
### Poor Pears

Pear tree nine or ten years old, about 20 feet high, has not had a half crop of pears on it yet. What fruit it has is nearly all on north side. I don't know variety. They ripen early in September, begin to rot before ripe. One-third of the fruit was partially or wholly rotten at picking time. What is the trouble and what is the remedy?—Subscriber, Walnut Hill.

From your description of the way the tree acts we think your only remedy is to graft it over to some more prolific variety. It is possible that your soil may not be suitable for the tree's proper growth or the condition may be due to scale or blight infestations. Before going to the trouble of grafting it over have the county horticultural commissioner send one of his inspectors out to determine if the trouble may be due to this latter cause.

### Pear Blight

I wish to give through the Cultivator



*Here they come—down wind like an express train, straight for the blind. This is the time for cool judgment, a steady hand and a load of dependable Du Pont or Ballistite Powder.*

Du Pont makes powder—not shells. Du Pont Powders are loaded in every brand of shell. The name "DU PONT" or "BALLISTITE", printed on the carton and the top shot wad, tells you what powder you are shooting. Specify the powder when you buy the shell.

E. I. DU PONT DE NEMOURS & CO., Inc.
Wilmington, Delaware

There must be a reason for the overwhelming preference for shells loaded with Du Pont and Ballistite Powders. There is—shooters can depend on their accuracy.

SCHALK CHEMICAL CO.
349 E. Second St. Los Angeles

Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

my experience this year with pear blight. Perhaps others will wish to try it. I have two trees that were quite badly affected with blight last year and the year before. Last spring just as the sap was starting well I bored a ⅞ inch hole in each tree, the hole slanting downward, and poured into each one about 1½ ounces of creosote, then plugged the hole with a wooden plug. The wound is healing over nicely and there has been no indication of blight this year. I will skip next year and note results.—W. G. Marshall, Oakdale.

We have never had a great deal of faith in the injection of ingredients into the trunks of trees for the purpose of either inoculating them against diseases or for invigorating and making them more prolific. However, the experiment may be worth following up and we shall await with interest the result of this treatment on next year's growth and its resistance to blight. Some years since a professor at Stanford made experiments with chemicals plugged in bored holes in trees and at first claimed great results. We have heard nothing in recent years. The plan was first suggested nearly a half century ago and later was the basis of several fake "remedies." One possible explanation of the apparent immunity to blight is in this that the pear tree most vigorous in growth is most susceptible to blight disease. The boring of a large hole into the heart of a tree might lower vitality and render tree partially immune. It is fairly definitely proved that chemicals are not absorbed by solid wood tissues.

### Salway Peaches

Send you by same mail sample of a late freestone peach just beginning to ripen and which will extend into November. If you know this peach please give me name and opinion of it as a late market variety—Subscriber, San Fernando.

Your peach is either Salway or a seedling of Salway. Of course a very late Salway of good quality would likely sell well in local markets for fresh fruit but an extensive acreage woud not be justified. Canneries closed some time ago and canners are not anxious to extend season. Many stop with Phillips Cling, though some continue on Salway.

### Exchanging Milk Bottles

Sometimes I get bottles belonging to my competitor. I have other bottles from various parts of the state, tourists seeming to exchange them. Is there a law forbidding me to refill these bottles? Of course in regard to refilling my competitors' bottles in the same town, I wouldn't anyway. But I have several of his bottles and no doubt he has several of mine. And I understand he breaks all the bottles he gets of mine, so I could not exchange with him. Now I sell milk in two towns and could he make trouble if I used these bottles in the other town in case he would not pay for or exchange?—Subscriber, Arroyo Grande.

It is against the law to use bottles for milk which are stamped with the name of any concern not your own. We know that it is a serious problem to have one's bottles replaced by others which one can not use, but it cannot be avoided. This matter has been taken care of very nicely in Los Angeles by the formation of a bottle exchange which gathers up the stray bottles from the dairies and returns them to their own home, making a small charge for the service. In a small town common courtesy should prevail, and when you have accumulated a number of your competitors bottles you should notify him to come and get them and he should do the same by you. To break a competitor's bottles is worse than biting off one's nose to spite one's face as he is sure to do the same and both parties will be losers. There can be no profit in the milk business unless bottles can be kept working. The use of your competitor's bottles will give him a chance to cause your arrest and fine, no matter where you use them, so do not give him that opportunity in case there is bad blood between you. Try and make a business agreement with him regarding exchange, which will benefit you both.

# Plant an Orchard

**Note the Roots—** the foundation of your tree—such as are grown only on our foothill soil. Trees are hardy, with well toughened fiber. These qualities spell success to your planting.

I have done some constructive work to safeguard the industry in my promulgation of the "Bergtholdt Plan," *vital to the State and to every fruit grower.*

Copies of my four announcements of 1921, and my three announcements of 1922, will be mailed on application.
J. E. B.

Your success and that of your children is assured in commercial fruit growing. No other farming is as profitable—none so congenial.

If you have fruit land that you now employ in growing wheat, barley, alfalfa or any other farm crop, every year that you defer planting an orchard, you suffer an annual loss of income—the state, an economic loss.

*Prunes, pears, plums, apricots, almonds, table grapes, clingstone peaches and freestone peaches,* according to the adaptability of your location, will pay you more money than any other farm crop, besides enhancing the value of your acreage two dollars for every one dollar you expend in making your orchard.

The success of your orchard investment depends on the planting of good trees, reliably grown.

Our trees are propagated from buds and scions furnished by the Nurserymen's Buds Selection Association. They are well and carefully grown, and they will make good.

Trees are selling out fast and assortments are being rapidly depleted. Submit a list of your tree wants to us today while our foothill-grown trees are still available to you.

Send for our catalog of practical, accurate horticultural information and suggestions.

J. E. Bergtholdt
Secretary and Manager

COOK WITH COAL OIL GAS

The simplest and most economical coal oil gas burner ever known has been patented by Leonard Conow of San Francisco. This great invention is entirely different from other burners now in use. Fits any wood or coal stove. Can be installed by anyone in a few minutes. Lights instantly; heats whole stove, oven and waterback. No priming, no roaring, no carbon. Just turn a valve and get an intense heat that is regulated at will. Cheaper than coal or wood—and better. Brings happiness into the home.

To prove that the Conow Burner is exactly as represented, the manufacturers agree to send the outfit on 30 days' trial and let you see how it works before deciding to keep it. Write today for free literature which explains all. Conow Burner Co., 15 Columbus Avenue, Dept. H, San Francisco, Calif.

**KILL ANTS**
*The Marvel Way*

**Doom to the Worst Pest**

Each ant upon your premises is there with your full permission. With the aid of Marvel Ant Exterminator you can rid your premises of every trace of ants. This is the only Exterminator that is carried to the ants' nests by the workers. It kills the queens and males. It is a GELATINE that will not deteriorate. You set a can on each trail of the ants. Kept sealed; the ants crawl through portholes to devour the poison. I guarantee results. 60c per can; 6 cans $3.00. Literature free.

ORCHARDISTS
I offer a special can at a special price. Write for information.

# Household Department

BY THE BEAUTIFUL BLUE DANUBE

Calmly roll on, Oh Danube, roll!
Thy story is known from pole to pole.
In forest-clad hills rise silv'ry rills,
That grow as they go, and grandly now
Past castle and town of high renown,
Where many a son hath glory won;
And great is the fame of the name
That thy bards have handed down.

Yet 'tis not the trill
Of the tinkling riil,
Nor the story
Of thy glory
Makes our voices ring
When thy song we sing,
Tho' thy praises sound
Where hearts are found.

'Tis a strain we hear,
Mystic, quaint and clear,
Elf-enchanted,
Memory haunted,
In our heart-land where,
Like the childhood's air
Of a strong old song,
'Tis borne along.

My rippling waters call
To my children one and all;
Tho' in distant lands they roam,
On wings of the wind come songs of home.
And thro' the passing years,
With their joys, their hopes, their fears,
Shall my swell, my sweep, my sound
In the heart of their hearts' deep memories be wound.

Treasure the days of thy youth,
Hear ye my waves complain,
Their waters once fled, of a truth,
Flow not back again;
But youth is rash and gay,
And will dash, and splash, and play
With the world, as tho' to say:
"I'll laugh, love and live forever and a day."

In spring my flow halts a little at first,
The ice-bridge binds before it is burst,
Press warm, then, by night and by day,
It soon will melt away.
With melting glance must a maiden be pressed;
Woo warmly, then, and give her no rest,
Tho' oft-times her lips may say nay,
She will at last give way.

Walk with me, talk with me,
You like me, don't you dear?
Laugh with me, chaff with me,
You miss me, don't you dear?
Sigh with me, cry with me,
You'll kiss me, won't you, dear?
Play with me, stay with me,
The live-long day!

The streamlets clear in the woods are so shy,
Say to me "Why! marry, not I!"
Yet soon you'll see, they'll run gaily with me
Far, far away to the sea.
Ah, maiden dear, true and gentle thou art,
Yield him thy heart, 'till death you do part!
How long has he lov'd thee! Oh, answer him,
Say, he may love thee for aye!

Maidens, heed! Hark, the vespers ring!
Time is on the wing!
Beauty flies! Passion dies!
Sieze the hour while now the whole world yet before you lies,
Lovers, plead! There their troth they plight,
All will now come right!
I must on, hurry on,
Other hearts there are that still are parted from their own.

Ding, dong, ding, dong!
Hear those bells!
They're wedding bells!
Hark! Hark!

Yes, I'll find some as I roll on my way,
That are going to be married today!
And if some must wait for a year,
They will find me here.
For to your fathers and mothers sang I,
To your children I'll sing by and by;
When a thousand years shall be gone,
I'll be singing on.

Men must work
In their joy and woe,
And a maid must weep;
It is sad, it is so!
Laugh, love and live,
As I joyous flow,
Take what life can give,
And be cheerfully ready to go!
Words by Henry Grafton Chapman.

## ANNA AND THE CHERRIES

By Clara Peterson

IN Switzerland, you know, the mountain tops are covered with snow always, even in summer. When it is winter there the snow in drifted places is sometimes as high as the telegraph poles. Then spring comes and all the valleys are happy, for the snow melts. Little flowers rise from the ground where the snow has lain, almost before the coldness has gone away—lilac bells and crocuses, anemones and geraniums, white lilies and gentians of peacock blue.

Long ago as the children gathered the flowers they would look up at the snowy mountain peaks and talk in whispers of the wild man who lived there and who in winter sent great snow slides down into the valleys to ruin everything they fell upon.

"My grandmother says that sometimes the snow slides start themselves because the snow on the mountain peaks gets so heavy, but often the wild man is to blame. Do you know what he does? He goes to the top of every peak and makes a great snowball. He stands and dances. Then he starts it rolling down into the valley. He shouts with joy as it gets larger and larger. Down comes the avalanche upon us. It breaks our trees and smashes our cottages."

Now the wild man has left the mountain peaks and the snow slides do not come so often. Some people will tell you that it is because galleries and tunnels have been built to keep back the snow. But, if you can find some old, old Swiss lady who knows the story she will be glad to tell you about the Swiss girl Anna, and how she and her cherries sent the wild man away.

Anna's black cottage was at the foot of the mountain and there were cherry trees all around it. She was always very happy when spring came and the trees began to cover themselves with blossoms for then she could forget about the snow. After the petals had drifted to the ground Anna liked to watch the small green cherries get larger and larger and redder and redder until they were like delicious balls of red light. Then she would begin to pick them.

This year there were so many cherries that when Anna had sold boxes of them to all her neighbors and stored cans and cans of them in her preserve closet, she still had left a great tall basketful. She stood in her doorway looking down at them and wondering what to do. The sun sparkled on their redness and on her yellow hair. It sparkled too on the glacier which she could see far away through the trees and as Anna lifted her head and gazed at the mountain of ice she thought of the wild man.

"I know what I shall do," said Anna to herself. "Everyone knows that the wild man lives somewhere on the old road to Wiesen. I shall start this very morning and carry him my cherries. Surely he is not so cruel during the summer. Perhaps no one has ever been kind to him. I shall tell him of the harm he does when he sends needless snow slides down upon our trees and houses."

She looked very young and beautiful as she started out with the basket of cherries swinging from her arm. Her black bodice was edged with green ribbons which tied saucily at each shoulder. Her skirt was red and yellow and black and she wore her best white apron which was edged with red ribbon and white lace.

The road ran along a narrow ledge and by the time Anna had climbed high above the forests she was very tired. She shivered too at the smallness of the path and her head grew dizzy when she looked over the edge to the rushing river far below. She changed the basket often from one arm to the other and as the air grew colder she was almost sorry she had come.

"I have heard that there is a bridge," said Anna aloud. "I have heard too that the wild man lives somewhere near it."

She turned the rocky corner suddenly and there swung the tiny bridge between two cliffs. Anna took a step forward.

"Get off my beard!" shouted a terrible voice and something moved beneath her feet.

Anna jumped back against the cliff and clasped her basket tightly. She was wishing very heartily indeed that she had not come for there lay the wild man spread out in the sun, his long black beard across the path.

He got lazily to his feet and Anna saw that he was twice as tall as she and very, very old, though his hair was black. He wore a robe of snow white fur and his bare arms were long and hideous. There were a thousand wrinkles in his face but his teeth were white and even and as Anna looked affrightedly up into his eyes she saw that they were big and brown and tired looking, almost like the eyes of the calf tied in her back yard at home.

"I have come with a present for you," said Anna, but her voice did not sound at all and she tried again.

(Continued Next Week)

## HOUSEHOLD QUERIES

Macaroni

Will you kindly print recipes for making dishes out of macaroni other than salad. Enjoy the paper and use many of the recipes given.—Subscriber, Campbell.

To Prepare Macaroni—The macaroni may be broken into pieces 1½ inches long or it may be cooked whole. In all recipes prepare as follows: Grease the bottom of a deep saucepan and then add 2 quarts of boiling water. Let boil for 2 minutes and add macaroni. Stir for a few minutes and then cook for 15 minutes. Turn into a col-

**Oil Light Beats Electric or Gas**

**BURNS 94% AIR**

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 36 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Dept. No. 40 3926 N. Kimball Ave., Chicago, Ill.

ander and drain, then blanch under running cold water for 3 minutes. Let drain. It is then ready to use in any number of ways. Greasing the saucepan prevents the macaroni from sticking to the bottom while cooking.

The Italian prepares a seasoning as follows: Wash 2 leeks, 6 branches of parsley, 2 green or red peppers, 4 branches celery, 6 onions, tiny bit of garlic. Place in chopping bowl and chop very fine. Place in saucepan ½ cup of vegetable cooking oil and add vegetables. Cook slowly until soft and add one small can of tomato paste. Blend well and pour in a bowl or jar and set in cool place. This mixture will keep in a refrigerator or cool place for one week in summer and from 10 to 12 days in winter. This mixture is called tomato aux fine herbes. Small portions of meat that would be insufficient to serve alone can be utilized in making these dishes. When making gravy, prepare enough so that a cup or more may be set aside to use in the macaroni dishes.

Macaroni Mileuse—Wipe with damp cloth and cut in 1 inch blocks one pound of shin beef. Roll in flour and brown quickly in hot fat. Place in a deep saucepan and add 3 pints cold water, 2 onions cut fine, 1 medium sized carrot cut in dice. Bring to boil and cook gently until meat is tender. Add ½ cup tomato aux fine herbes, 2 teaspoons salt, 1½ teaspoons paprika, 6 ounces prepared macaroni. Bring to a boil and cook until the macaroni is well heated. Pour on large platter and garnish with finely chopped parsley.

Baked Macaroni—Arrange prepared macaroni in a buttered baking dish in layers with cream sauce. Sprinkle top with fine bread crumbs and grated cheese and bake in moderate oven 25 minutes.

Macaroni Souffle—Cook ¼ pound macaroni and when cool chop fine. Add 1 onion chopped fine, 1 red pepper chopped fine, 4 bunches parsley chopped fine, yolks 2 eggs, 2 cups cream sauce, 1½ teaspoons salt, 1 teaspoon paprika. Beat to mix and then cut and fold in the stiffly beaten whites of 2 eggs. Pour into a greased baking dish and bake in moderate oven 20 minutes. Serve at once.

Macaroni Cutlets—Cook ¼ pound macaroni, cool and chop fine. Place in bowl and add ½ cup grated cheese, 2 tablespoons grated onion, 1 tablespoon finely minced parsley, 2 teaspoons salt, 1 teaspoon paprika, 1 well beaten egg. Mix thoroughly and mould into croquettes. Roll in flour, dip in beaten egg, roll in fine crumbs and fry in hot fat. Place in hot oven for 10 minutes to finish cooking.

Macaroni, Olives and Cheese—This dish is famous among the mountain folk in Italy and is served on gala days. Cook 4 ounces macaroni, cool and chop fine. Add ½ cup pimento olives, chopped fine, ½ cup grated cheese, 2 cups cream sauce, 1 large onion, minced fine, 2 large red peppers, minced fine, 2 teaspoons salt, 2 teaspoons paprika, tiny piece garlic. Mix and pour into baking dish. Dot the top with bits of butter. Place in hot oven for 25 minutes.

Nut and Macaroni Savory—4 tablespoons melted shortening, ½ pound chopped Brazil nuts, 1 cup boiled macaroni, 1¾ cups bread crumbs, 2 eggs, 3 cups milk, 2 tablespoons chopped parsley, salt, pepper, and powdered mace to taste, brown sauce. Cut cooked macaroni into small pieces, put into bowl, add nuts, breadcrumbs, seasonings, eggs well beaten, and milk. Turn into well greased earthenware dish, dot with tiny pieces of butter and bake in moderate oven 45 minutes. Serve hot with brown sauce.

Macaroni Custard—Place in saucepan 2 cups milk, 1½ cups water, 6 level tablespoons cornstarch. Dissolve the starch in the water and add the milk. Bring to a boil and cook for five minutes. Remove from the fire and add yolks of 2 eggs, 1 cup sugar, 1½ teaspoons vanilla. Beat to mix and pour over 6 ounces cooked macaroni, add ½ cup raisins and bake in moderate oven for 25 minutes. Place the whites of 2 eggs in bowl and add 1 glass jelly. Beat until the mixture holds its shape and pile on top of pudding.

### Salt Rising Bread

I wonder if some of your good subscribers would send you recipes of salt rising bread so you could publish them in your columns. I very much wish to make some but lost my recipe in a fire a year ago and can't remember how I made it. I have not been able to find the recipe in any modern cook book and turn to you as a last resort. I find the recipes published in your paper very good and note that requests for recipes bring many replies, so I'm hoping some one will send the recipe for salt rising bread.—Subscriber, Soquel.

Here are directions for making "salt rising" but we shall be glad to publish other hints contributed by our housekeepers who are successful in making this most delicious of breads.

One cup milk, 2 tablespoons white corn meal, 1 teaspoon salt, 1 tablespoon sugar, butter (if used), 1 tablespoon flour. Scald the milk. Allow it to cool until it is lukewarm; then add the salt, sugar, and corn meal. Place in a fruit can or a heavy crock or pitcher and surround by water at about 120 degrees Fahrenheit. Water at this temperature is the hottest in which the hand can be held without inconvenience, and can be secured by mixing nearly equal parts of boiling water and tap water (unless the tap water is unusually warm). Allow the mixture to stand for 6 or 7 hours, or until it shows signs of fermentation. If it has fermented sufficiently, the gas can be heard as it escapes. This leaven contains enough liquid for one loaf. If more loaves are needed, add 1 cupful of water, 1 teaspoonful of salt, 1 tablespoonful of sugar, and 1 tablespoonful of butter for each additional loaf. Make a soft sponge by adding a cupful of flour for each loaf to be made. Beat thoroughly and put the sponge again at the temperature of about 120 degrees Fahrenheit. When it is very light, add more flour gradually until the dough is so stiff that it can be kneaded without sticking to the hands or to the board. Knead 10 or 15 minutes, put at once into the pans, allow to rise until about two and one-half times its original bulk, and bake. Self-rising bread is never so light as the bread raised with yeast. A loaf made with one cupful of liquid therefore will come not quite up to the top of a pan of standard size.

### Oh, Promise Me

I would like to see the words of the song, "Oh, Promise Me" printed in your columns—Subscriber, Riverside.

OH, PROMISE ME

Oh, promise me that some day you and I
Will take our love together to some sky,
Where we can be alone and faith renew,
And find the hollows where those flowers grew;
Those first, sweet violets of early spring,
Which come in whispers, thrill us both, and sing
Of love unspeakable that is to be;
Oh, promise me, oh, promise me!

Oh, promise me that you will take my hand,
The most unworthy in this lonely land,
And let me sit beside you, in your eyes
Seeing the vision of our paradise;
Hearing God's message while the organ rolls
Its mighty music to our very souls.
No love less perfect than a life with thee;
Oh, promise me, oh, promise me!

Oh, promise me that when with bated breath
I wait the presence of the angel, Death,
You will be near me, guide my faltering feet,
And softly breathe these words in accents sweet.
Come sometime to me from that distant shore,
Caress and comfort as in days of yore,
Triumphant over death our love shall be;
Oh, promise me, oh, promise me!—Harry B. Smith.

## HINTS FROM HOUSEKEEPERS

### Lemon Juice Muffins and Other Things

I wish to thank the household editor and some helpful subscribers for many good recipes and hints printed in this department and would like my lemon country neighbors to have my recipe for lemon juice muffins. These I often make when I have no sour milk on hand.

Mix well and sift together 2½ cups flour (measure before sifting), 1 level teaspoon soda, ½ teaspoon salt. Stir in 1¾ cup rich milk and 4 tablespoons lemon juice. Bake in moderate oven. This will make from 9 to 12 muffins. The lemon juice gives them a faint flavor and aroma that we like very much.

Here are two other suggestions that might help someone:

To Peel Dried Peaches—Dried peaches with tough skins may easily be peeled in this way. Wash and soak over night. Bring slowly to the boiling point. Set aside till cool when the skins may be slipped off. The peaches should then be returned to the juice to simmer until soft.

Beat Clabber—I have found I have better success with quick breads in which clabber milk is used if I beat the clabber well before adding to the other ingredients.

I like this exchange of ideas in the Cultivator. It seems so neighborly.—La Mesa Subscriber.

### Papering—Easy Jam

I have found so many helpful things in your paper that I feel I want to pass on a hint to some other homemaker like myself who has not much to rely on for fixing up homes, etc., and am sure there will be some among the readers like us who would get help from this plan I have followed. We built a house during war times when prices were trebled. Our money gave out and house could not be finished inside. The lumber was rough and splinters found way into fingers often. Besides 'twas unsightly, and the wind came in, and rain beat in when we had hard rains so the walls were often damp. I tried tacking building paper between joists, but it was no good, so I took paper boxes, the corrugated boxes that grocers get goods in, and fruit jars are sold in. These are just destroyed at stores and we get them free. I tacked these closely all over, taking care to fit edges neatly, then put old cloth pasted over that. I got samples of wall paper from paper house, odds and ends, but matched the shade of backs as nearly as possible. These I pasted on my walls, the back side out, and the effect is splendid, clean white walls. I put papers over studding first, allowing plenty of room over the sides. This made it much easier to fit them. I got a couple of odd pieces of border alike (a dainty cut out pattern) for 30 cents. This added to the walls. It surely makes a pleasing change, besides, when it's soiled I now can kalsomine over it at very little cost.

We have had some hard rain and cold winds here in the mountains, and the house has been so comfortable, no wind goes through and less fuel is needed—besides the pleasure of a clean neat looking wall, and the whole cost was less than two dollar (not counting my work of course). I am so delighted with the change in my ugly walls I want to pass the idea on and thought you could tell of it in the household columns and help some other poor sister who dislikes ugly things, but whose purse was short like ours.

Another thing I do, I cut out from the paper articles I want. I have separate books for each division. Poultry, cooking, figs and all fruits, culture, etc. are kept separate so I can readily turn to any part I want to look up. The poultry answers have been especially helpful and I find so many good cooking helps. I am also sending my raw jam recipe which I have used for a number of years. Jam keeps splendidly and is so much less work. I make all kinds of berries into this jam and they never lose the fresh flavor or rich color and for short cakes, etc., they can't be beaten.

(Continued on Page 515)

# Are you among these thousands?

THOUSANDS of people keep on trying, year after year, to build health from food that has been robbed of certain elements required for perfect nutrition.

If your food doesn't contain the mineral properties that go to build up nerve, tooth and bone structure, *there is no other means by which you can get these vital elements.*

This is one reason why so many well-informed people eat Grape-Nuts—the food that enriches the blood, and builds sound, healthy bodies.

Grape-Nuts is made from whole wheat flour and malted barley—baked for 20 hours, which develops the natural richness of the grains and makes for ready digestibility.

And Grape-Nuts is perfectly delicious—served with milk or cream, or made into an appetizing pudding for dinner.

Get a package of Grape-Nuts from your grocer today, and give the family a help to health.

# ECONOMY STOCK POWDER

Is a scientific combination of minerals, roots, herbs and sodas. The effect is to sweeten the stomach, purify the blood, regulate the bowels, liver and kidneys, strengthen the nerve centers and aid digestion.

It proves effective in restoring a normal condition and its tonic and digestive properties will stimulate the flow of the digestive juices, promote appetite and improve the circulation.

CALF SCOURING: Can be checked and eliminated with Economy Powder.

ECONOMY STOCK POWDER is endorsed and recommended by many of the leading dairymen in California.

## BEEF CATTLE

### Shorthorns

Three bulls owned by exhibitor—1, Caledonian Farms, West Sacramento; 2, Straloch Farm, Davis; 3, Caledonia.

Two bulls bred and owned by exhibitor—1, Caledonia; 2, Caledonia; 3, Pacheco Cattle Co., Hollister.

Bull, 3 years old—1, T. T. Miller, Hollister on Millmar Matchless; 2, Howard Vaughn, Dixon, on Clarion.

Bull, 2 years old—1, Caledonia on King Caledonia 2d; 2, Pacheco on Pacheco Lad 3rd; 3, Straloch on Braywood Collynie Imp.; 4, Dibblee Estate, Lompoc, on Star of Cluny; 5, Caledonia on Count Kingwood.

Senior yearling bull—1, Caledonia on The Caledonian; 2, Miller on Stamp of Millmar; 3, Dibblee on Royal Crescent.

Junior yearling bull—1, Straloch on Helmsman; 2, Miller on Millmar Sultan 5th; 3, Pacheco on Pacheco Lad 28th.

Senior bull calf—1, Caledonia on Caledonia Emblem; 2, Caledonia on Caledonia Supreme; 3, Straloch on Villager Cumberland; 4, Caledonia on Caledonia Omega; 5, Pacheco on Pacheco Lad 314th; 6, Dibblee on Village Prince; 7, Straloch on Straloch Stamp.

Junior bull calf—1, Caledonia on Caledonia Commander; 2, Straloch on Straloch Marquis; 3, Caledonia on Caledonia Hope; 4, Caledonia on Caledonia Rex; 5, Pacheco on Pacheco Fairplay; 6, Miller on Millmar Stamp 6th; 7, Pacheco on Pacheco Lad 351st; 8, Vaughn on Village Victor.

Senior champion bull—Caledonia on Caledonia King 2d.

Junior champion bull—Caledonia on Caledonia Commander.

Grand champion bull—Caledonia on Caledonia King 2d.

Cow 3 years old calf by side—Dibblee on Roan Dorothy 2d.

Cow, 3 years old—1, Caledonia on Glenbessie 3rd; 2, Straloch on Mistress Maria.

Cow or heifer, 2 years old—1, Dibblee on Princess Royal; 2, Miller on White Briar Millmar; 3, Caledonia on Glenbrook's Memory; 4, Straloch on Memory's Queen.

Senior yearling heifer—1, Pacheco on Knight's Lassie; 2, Caledonia on Caledonia Queen; 3, Miller on White Millmar; 4, Straloch on Straloch Maria; 5, Dibblee on Lancaster Lady 2d; 6, Dibblee on Orange Blossom Maid; 7, Caledonia on Caledonia Rosetta; 8, Miller on Choice Beauty Millmar 4th.

Junior yearling heifer—1, Caledonia on Caledonia Countess; 2, Caledonia on Caledonia Mischief 2d; 3, Pachecho on Pacheco Lass 280th; 4, Straloch on Silver Missie H; 5, Miller on Millmar Mistletoe 2d.

Senior heifer calf—1, Pacheco on Pacheco Lass 292d; 2, Straloch on Straloch Fashioness; 3, Caledonia on Matchless Missie; 4, Pacheco on Pacheco Lass 293rd; 5, Miller on Beauty Millmar; 6, Straloch on Straloch Fashion; 7, Pacheco on Silver Beauty; 8, Straloch on Missie of Straloch; 9, T. S. Glide on Cheerful Maid 6th; 10, Glide on Hillcrest Mary 5th.

Senior champion female—Miller on Princess Royal.

Junior champion female—Pacheco on Knight's Lassie.

Grand champion female—Pacheco on Knight's Lassie.

Graded herd—1, Caledonia; 2, Straloch.

Yearling herd—1, Caledonia; 2, Pacheco; 3, Dibblee; 4, Straloch; 5, Miller.

Calf herd—1, Straloch; 2, Caledonia; 3, Pacheco.

Get of sire—1, Caledonia on get of Caledonia; 2, Caledonia on get of Caledonia; 3, Straloch on get of California Model; 4, Pacheco on get of Pacheco Marshal; 5, Miller on get of Greendale Sultan; 6, Dibblee on get of Grand Gallant.

### Herefords

Three bulls, owned by exhibitor—1, C. S. Howard, Willets; 2, J. A. Bunting, Mission San Jose; 3, R. C. Jacks, Monterey; 4, Diablo Stock Farm, Danville; 5, A. H. Barnum, Oregon; 6, H. M. Barngrover, Taylorsvile.

Two bulls, bred and owned by exhibitor—1, Bunting; 2, Wm. Briggs & Son, Dixon; 3, Barnum; 4, Barngrover.

Aged bulls—1, Barnum on Beau Carlos 15th; 2, Jacks on Paragon Dare; 3, Diablo on Junior Grove.

Two year old bulls—1, Howard on Mischief Fairfax; 2, H. H. Gable, Esparto on Real Patrician; 3, Bunting on Golden Gate; 4, H. A. Baldwin on Domino President.

Senior yearling bulls—1, Jacks on Laurel Perfection 2d; 2, Barngrover on Roosevelt 2d.

Junior yearling bulls—1, Howard on Beau Blanchard, Jr.; 2, Diablo on Marvel's Pride 15th; 3, Barnum on Carlos Donald; 4, Howard on Bocaldo Prince 1st; 5, and 6, Barnum on Prince Carlos and Young B. Carlos 19th; 7 and 8, Diablo on Little Wizard and Prince Wizard.

Senior bull calves—1 and 4, Bunting on Mission 2d and Mission Brummel; 2, Baldwin on The California; 3 and 5, Howard on Prince Marshall 2d and Beau Perfect 1st; 6 and 7, Barngrover on Nos. 789 and 790; 8, Jacks on Darwood; 9, Diablo on Diablo King.

Junior bull calves—1 and 2, Briggs & Son on Donald Dan 2d and D. D. 1st; 3, Bunting on Mission Paragon; 4 and 8, Gable on Woodland and Yolo Lad; 5, Jacks on Imperial Lad; 6, Howard on Price Mansell 6th.

Aged cows—1, Jackson on Bocaldo Beauty; 2, Barngrover on No. 791; 3, 4 and 5, Barnum on Lone Beauty 3rd, Pr. Valley 2d and Sunlight 2d.

Two year old heifers—1, Howard on Lady Fairfax 20th; 2, Jackson Phyllis Velie; 3, Baldwin on Aurora 2d.

Senior yearling heifers—1, Briggs & Son on Miss Dare 20th; 2, Baldwin on Princess B. M.; 3 and 4, Jacks on No. 799 and Lady Dare 2d; 5, Diablo on Diablo's Gladiolis; 6th, Barngrover on No. 792.

Junior yearling heifers—1 and 2, Briggs & Son on Eulalie Velie and Susette Velie; 3, 4 and 5, Barnum on May Carlos, Rowena Princess and Miss Bonnie Lad; 6, Barngrover on Patricia Jean.

Senior heifer calves—1, Jacks on Gertrude; 2, Baldwin on Lady Domino; 3, and 4, Howard on Bonnie Ruper 2d and Lady Mansell 3rd; 5 and 6, Bunting on Mission Helm and Mission May.

Aged herd—Jacks.

Yearling herd—1, Barnum, 2, Barngrover.

Calf herd—1, Bunting; 2, Jacks.

Get of sire—1, Bunting on The Peer; 2, Barnum on Beau Carlos 19th; 3, Barngrover on Patrician 5th.

Championships—Senior and grand champion bull, Mischief Fairfax; junior champion bull, Beau Blanchard, Jr.; senior and grand champion female, Bocaldo Beauty; junior champion female, Eulalie Velie.

### Aberdeen Angus

The only herd exhibited was that of Congdon and Battle, Yakima, Washington.

## DAIRY CATTLE

### Holstein-Friesian

Bull, 3 years old—1, Millbrae Dairy on King Pontiac Musa Netherland; 2, Frank Brescianini on Helm Hiske Johanna De Kol.

Bull, 2 years old—1, Brescianini on Sir Ormsby Korndyke Fern.

Junior yearling bull—1, Bridgford Holstein Co. on King Pontiac Saltertia Prilly.

Senior bull calf—1, Bridgford on King Prilly Pontiac Echo; 2, Millbrae on Millbrae Therese Korndyke; 3, Brescianini on Napstahos Sir Ormsby Raphaella.

Junior bull calf—1, Millbrae on Millbrae Pontiac Olive Korndyke; 2, Bridgford on King Pontiac Princess Prilly.

Senior champion bull—Millbrae on King Pontiac Musa of Netherland.

Junior champion bull—Bridgford on King Pontiac Saltertia Prilly.

Grand champion bull—Millbrae on King Pontiac Musa of Netherland.

Cow, 4 years old—1, Millbrae on Thelma of Millbrae; 2, Millbrae on Netherland of Millbrae; 3, Millbrae on Sleepy Barrilos Pontiac; 4, Millbrae on Juana Pontiac Maid of Millbrae; 5, Millbrae on Verna Pontiac of Millbrae.

Cow, 3 years old—1, Millbrae on Gladys King Pontiac; 2, Millbrae on Barrilos King Pontiac.

Cow or heifer, 2 years old—1, Millbrae on Millbrae Pontiac Sarcastic Maid.

Senior yearling heifer—1, Millbrae on Millbrae Rag Apple Esteves.

Junior yearling heifer—1, Millbrae on Milbrae Ormsby Queen.

Senior heifer calf—1, Bridgford on Abbekerk Adirondac Maid Prilly; 2, Millbrae on Millbrae Antoinette Pontiac; 3, Bridgford on Unnamed; 4, Bridgford on Eva De Kol Segis Prilly; 5, Millbrae on Angelina Korndyke Pontiac.

Junior heifer calf—1, Millbrae on Millbrae Babronia Pontiac; 2, Bridgford on Princess Echo Prilly Segis; 3, Bridgford on Mercedes Inka Hengerveld Prilly; 4, Bridgford on Kate Hengerveld Prilly Alcartra; 5, Millbrae on Millbrae Fracine Pontiac Maid.

Senior champion female—Millbrae on Millbrae Pontiac Sarcastic Maid.

Junior champion female—Bridgford on Abbekerk Adirondac Maid Prilly.

Grand champion female—Millbrae on Millbrae Pontiac Sarcastic Maid.

Aged herd—Millbrae.

Young herd—Millbrae.

Calf herd—1, Bridgford; 2, Millbrae Dairy.

Get of sire—1, Millbrae on get of King Pontiac Musa Netherland; 2, Bridgford on get of King Segis Alcartra Prilly; 3, Millbrae on get of King Pontiac Musa Netherland.

Produce of dam—1, Millbrae on Produce of Sleepy Barrolis of Millbrae; 2, Bridgford on Produce of Princess Pontiac Saltertia of Vina.

Five cows in milk—1, Millbrae.

### Jersey

Bull, three years old—1, J. E. Thorp on Biddy's King of Mossdale; 2, Thorp on Jolly Senator Raleigh.

Bull 2 years old—1, Waterloo Jersey Herd on Financial Corrector.

Senior yearling bull—1, Thorp on Biddy's King of Mossdale, Jr.

Junior yearling bull—1, Thorp on King Tip of Mossdale.

Senior bull calf—1, Thorp on Naomi's King of Mossdale; 2, Waterloo on Financial Corrector Gold.

Junior bull calf—1, Thorp on Nobleman of Tintagel.

Senior champion bull—Waterloo on Financial Corrector.

Junior champion bull—Thorp on Naomi's King of Mossdale.

Grand champion bull—Waterloo on Financial Corrector.

Cow, 4 years old—1, Waterloo on Valet's Grace Doreen of L.; 2, Thorp on Goldie's Nehalem Cowslip; 3, Thorp on Salome of Mossdale.

Cow, 3 years old—1, Thorp on Queen Bess of Mossdale.

Cow or heifer, 2 years old—1, Waterloo on Goldie's Dame of Onata; 2, Thorp on Girlie of Mossdale.

Senior yearling heifer—1, Thorp on Wardress of Mossdale; 2, Waterloo on D. L. K.'s Aljibe; 3, Thorp on King's Bessie of Mossdale.

Junior yearling heifer—1, Thorp on King's Miss of Mossdale.

Senior heifer calf—1, Waterloo on Financial Corrector's Fisola; 2, Waterloo on Financial Corrector's Viola; 3, Thorp on Miss Golden Gate of Mossdale; 4, Thorp on Salome May of Mossdale.

Junior heifer calf—1, Thorp on Gypsy

May of Mossdale; 2, Waterloo on Financial Corrector's Glory; 3, Thorp on King's Daughter of Mossdale.

Cow, having official yearly record—1, Waterloo on Valet's Grace Doreen of ...; 2, Thorp on Salome of Mossdale.

Senior champion female—Waterloo on Goldie's Dame of Onata.

Junior champion female—Thorp on Gypsy May of Mossdale.

Grand champion female—Waterloo on Goldie's Dame of Onata.

Aged herd—1, Waterloo; 2, Thorp.

Young herd—1, Thorp.

Calf herd—1, Thorp.

Get of sire—1, Waterloo on get of Financial Corrector; 2, Thorp on Biddy's King of Mossdale; 3, Thorp on Jolly Senator Raleigh.

Produce of dam—1, Thorp on Produce of Salome of Mossdale.

Five cows in milk—1, Thorp.

### Guernsey

Bull, 3 years old—1, Humphrey on Nobleman of Maple Hill.

Bull, 2 years old—J. A. Brown on Azucenas Penrod.

Senior yearling bull—1, Brown on Floridale Secret King; 2, Humphrey on Escalon Favorite.

Junior yearling bull—1, Brown on Golden Hero of Santa Cruz.

Senior bull calf—1, Humphrey on Escalon Ricardo; 2, Brown on Golden Sequel of Santa Cruz; 3, Humphrey on Escalon Archer; 4, Humphrey on Escalon Golden Noble.

Junior bull calf—1, Humphrey on Escalon Senator; 2, Brown on Candie's Lad of Santa Cruz.

Senior champion bull—Humphrey on Nobleman of Maple Hill.

Junior champion bull—Brown on Floridale of Secret King.

Grand champion bull—Humphrey on Nobleman of Maple Hill.

Cow, 4 years old—1, Humphrey on Phillys of Mayhews; 2, Brown on Blossie's Sequel; 3, Brown on Carmensita.

Cow, 3 years old—1, Humphrey on Escalon Daisy.

Cow, or heifer, 2 years old—1, Humphrey on Mayhews, Bonnie Lassie; 2, Brown on Bess Van Tassel.

Senior yearling heifer—1, Humphrey on Escalon Nancy; 2, Murphy on Escalon Pearl; 3, Brown on La Bonita of Santa Cruz; 4, Brown on Ruby's Queen of Beirnietoun.

Junior yearling heifer—1, Humphrey on Escalon Naomi; 2, Humphrey on Escalon Joan; 3, Brown on Caroline Sylvia.

Senior heifer calf—1, Humphrey on Escalon Pollyanna; 2, Humphrey on Escalon Lotty; 3, Brown on La Miranda of Santa Cruz.

Junior heifer calf—1, Humphrey on Escalon Beauty; 2, Humphrey on Escalon Valentine; 3, Brown on La Isabella of Santa Cruz.

Cow, having official yearly record—1, Brown on Blossies Sequel; 2, Brown on Carmensita.

Senior champion female—Humphrey on Mayhew's Bonnie Lass.

Junior champion female—Humphrey on Escalon Beauty.

Grand champion female—Humhprey on Mayhew's Bonnie Lass.

Aged herd—1, Humphrey; 2, Brown.

Young herd—1, Humphrey.

Calf herd—1, Humphrey.

Get of sire—1, Humphrey on get of Nobleman of Maple Hill; 2, Humphrey on Get of Nobleman of Maple Hill; 3, Brown on get of Imp. Golden Hero of Beauregard.

Produce of Dam—1, Humphrey on Produce of Grape Wild Jewel; 2, Brown on Produce of Blossie of the Caillotene; 3, Humphrey on Produce of Imp. Daisy 2d of the C. R.; 4, Brown on Produce of May Candie.

### Ayrshire

Bull, 2 years old—1, Le Baron Estate on Middlesex Royal Champion.

Senior yearling bull—1, Le Baron on Norabel Commander.

Junior yearling bull—1, R. H. Trumbull on Steybrae Beauty.

Senior bull calf—1, Trumbull on Commander of N. O.; 2, Le Baron on Norabel Timekeeper.

Junior bull calf—1, Le Baron on Norabel Johnnie Walker.

Senior champion bull—Le Baron on Middlesex Royal Champion.

Junior champion bull—Le Baron on Norabel Johnnie Walker.

Grand champion bull—Le Baron on Middlesex Royal Champion.

Cow, 4 years old—1, Le Baron on Miss Blossom of South Farm; 2, Le Baron on Willowmoor Winsome 3rd; 3, Le Baron on Princess Maggie.

Cow, 3 years old—1, Le Baron on Norabel Marie; 2, Le Baron on Norabel Blossom.

Cow or heifer, 2 years old—1, Le Baron on Norabel Dandy; 2, Le Baron on Norabel Woodbine; 3, Trumbull on Pansy of North Oaks.

Senior yearling heifer—1, Le Baron, on Norabel Cherry; 2, Trumbull on unnamed; 3, Trumbull, unnamed; 4, Le Baron on Norabel Jessie.

Junior yearling heifer—1, Le Baron on Norabel Violet; 2, Trumbull on unnamed; 3, Trumbull on unnamed; 4, Le Baron on Norabel Letty.

Senior heifer calf—1, Le Baron on Norabel Gay Lass; 2, Trumbull on unnamed; 3, Le Baron on Norabel Mistletoe; 4, Le Baron on Norabel of Fatima.

Junior heifer calf—1, Le Baron on Norabel Tootsie; 2, Trumbull on unnamed.

Cow, having official yearly record—1, Le Baron on Princess Maggie.

Senior champion female—Le Baron on Miss Blossom of South Farm.

Junior champion female—Le Baron on Norabel Gay Lass.

Grand champion female—Le Baron on Norabel Gay Lass.

Aged herd—Le Baron.

Young herd—1, Le Baron; 2, Trumbull.

Calf, herd—Le Baron.

Get of sire—1, Le Baron on get of Pinehurst White Prince; 2, Le Baron on get of Bell's Mint Master of Wendover; 3, Trumbull on get of Mac's Statesman.

Produce of dam—1, Le Baron on Produce of Norabel Amelia; 2, Trumbull on unnamed.

Five cows in milk—Le Baron.

### Dairy Shorthorns

Bull, 3 years old—1, Santa Rosa Stock Farm, Santa Rosa, on Count Tickford; 2, J. D. Rowe & Son, Davis, on Silver Sword.

Bull, 2 years old—1, Rowe & Son on Innisfail Perfection.

Junior yearling bull—1, Santa Rosa on Count Marshall.

Senior bull calf—Rowe & Son on Galvina; 2, Santa Rosa on Count Madrigal.

Junior bull calf—1, Santa Rosa on Count Idaho; 2, Rowe & Son on Innisfail Lad; 3, Santa Rosa on Count Roystove.

Senior champion bull—Santa Rosa on Count Tickford.

Junior champion bull—Santa Rosa on Count Marshall.

Grand champion bull—Santa Rosa on Count Tickford.

Cow, 4 years old—1, Rowe & Son on Bellevue Daisy; 2, Santa Rosa on Bessborough Curlew; 3, Rowe & Son on Alma; 4, Rowe & Son on Valley Belle 5th; 5, Santa Rosa on Woodburn Rose.

Cow, 3 years old—1, Rowe & Son on Gypsy Girl; 2, Rowe & Son on Beggar Maid's Beauty 2d.

Cow or heifer, 2 years old—1, Santa Rosa on Lovely Perfection; 2, Rowe & Son on Countess Innisfail; 3, Santa Rosa on Roan Bess.

Junior champion female—Rowe & Son on Innesfail Betty.

Grand champion female—Rowe & Son on Innisfail Betty.

Aged herd—1, Santa Rosa; 2, Rowe & Son.

Young herd—1, Rowe & Son; 2, Santa Rosa.

Calf herd—1, Santa Rosa.

Get of sire—1, Rowe & Son on get of Innisfail Favorite; 2, Santa Rosa on get of Count Tickford; 3, Rowe & Son on get of Glenside Favorite; 4, Santa Rosa on get of Count Tickford.

Produce of dam—1, Santa Rosa on Produce of Daisy Maid; 2, Rowe & Son on Produce of Buttercup's Beauty.

Five cows in milk—1, Rowe & Son.

---

It is said there were some 30,000 cattle on feed in Imperial by November 1 and the same number in the Phoenix district on feed. My estimate is that with good rains California ranges can easily absorb 150,000 cattle. Thousands are arriving now on ranges but with a good year more can be carried and fattened.—A. L. Spellmeyer.

# What Experience Taught Me in the Growing of ALFALFA, How I Turned Failure Into SUCCESS!

J.M. BOMBERGER
Pres. BOMBERGER SEED COMPANY

**DURING MY FIRST FIVE OR SIX YEARS** of dairying I was only fairly successful. I had a hard time making ends meet financially.

**I HAPPENED TO TRY OUT** fourteen different kinds of alfalfa planted in rows and I watched their growth.

**AFTER THAT** I planted the kinds that produced the most and best hay under California climatic and soil conditions.

**THE RESULT WAS** that I averaged, year after year, about twice as much hay per acre as I grew the first five years.

**DURING THE FOLLOWING TEN YEARS** I kept about twice as many cows on the same land and never bought a pound of hay.

**GROWING LOTS OF GOOD DAIRY ALFALFA** Cheaply helped me so much that I considered it (next to well bred cattle) the very foundation of profitable dairying.

**MY FOURTEEN TRIAL ROWS SHOWED** that imported alfalfa seed is not adapted to California conditions and produces poorly.

That some of the Southern Alfalfas yield heavily but have a tendency toward coarseness and are not so long-lived as the Northern alfalfas.

That the Utah and other Northern alfalfas are long-lived, but yield too little hay under California conditions.

**EVERYTHING CONSIDERED** the best alfalfa that I have grown is the MODOCK common alfalfa.

It is neither a Southern nor a Northern alfalfa, but seems to combine the best qualities of each under California conditions.

It endures the hardships that are incidental to irrigation better than any other alfalfa.

**TEN TONS OF HAY PER ACRE** per season is not unusual with MODOCK alfalfa.

**I REASONED LIKE THIS:** When I plant alfalfa seed, I expect at least fifty crops of hay from the one seeding and those fifty crops will depend largely upon the kind of seed I plant.

**CAREFUL SELECTION OF ALFALFA SEED** more than any other one thing turned my dairying from hard work and worry to an interesting, pleasant and profitable dairy.

**SOME OF MY NEIGHBORS** asked me to purchase alfalfa seed for them and by 1916 I found myself in the alfalfa seed business.

**WE HAVE NOW MADE IT POSSIBLE** for every retail dealer in California to sell MODOCK seed.

**SINCE WE HAVE BEEN** telling about **MODOCK** alfalfa, a few dealers have been trying to sell alfalfa seed for MODOCK that was not MODOCK seed at all.

**FOR THAT REASON** we started last year to sell the MODOCK alfalfa seed in a trade-marked bag like this.

**TO AVOID DISAPPOINTMENT** make very sure that the MODOCK alfalfa seed which you buy is in the trade-marked MODOCK bag.

**WELL BRED ALFALFA SEED** is the foundation of a heavy producing alfalfa field just as **WELL BRED DAIRY CATTLE** are the foundation of a heavy producing dairy herd.

Write for our circular which states fully how each kind of alfalfa behaves under California conditions.

Pacific Coast Offices: San Francisco, Los Angeles, Portland, Seattle, Spokane, Tacoma
Rocky Mountain Offices: Denver, Colorado; Salt Lake City, Utah

# The Chino Community Fair

By Jack Klein

ENTRIES being restricted to the western end of San Bernardino County, the Chino fair did not cause quite as much excitement among the outsiders as some, inside the district the interest has been intense and a wonderful little fair was the result. Starting with nothing but the idea three years ago it has developed into a very creditable show as large as some which boast of public and popular support and funds.

San Bernardinc County is larger than a great many states but agriculturally it is very small, so far the only district of much importance being the small southwestern corner, the part west of the mountains. This part is exceedingly well adapted for orange growing and general farming and every inch is cultivated to the limit. It is this section which corners at Chino and which this little fair boosts.

The agricultural tent at the fair was filled to overflowing with choice specimens of practically every product of the district, and the exhibits were very tastefully arranged. This exhibit owes its success to the untiring effort of Mr. Eastman who has taken it in charge and who plans from one year to the next how to bettter it. Grains, hay, fruit and nuts were shown in a multitude of varieties, proving that in this section almost anything can be grown successfully in a commercial way.

The automobile section, women's section, and machinery exhibits were as large and varied as at many larger shows. The livestock show was not very large but three breeds of dairy cattle and three of hogs were represented by good individuals. Harry Cook and Grant Brothers divided the Jersey premiums, each one showing a small herd. Cook's Jerseys are the pride of San Bernardino County and they are worthy of all praise that is heaped upon them as they are a very excellent herd and have held their own in the big shows this year. Cook's aged cow was made champion.

Windemere Farm had no competition in the Guernseys except one class and won all the first and special prizes. In the Holsteins the neighboring California Junior Republic won most of the ribbons excepting the champion bull which went to the San Bernardino County Farm on the good senior yearling, Sir Veeman De Kol. California Junior did not show Dichter Spofford Korndyke Lad 5 as Jack Skillcock who judged the Chino fair has usually shown him for the Republic and Mr. Condee, head of the Republic's farm, felt that it might embarrass the judge to have to place him.

There were not a great many hogs, and most of them were shown by members of the pig clubs of which there are a number in the vicinity. The quality of these pigs was generally very good, and most of them carried ribbons over their pens showing that they had been winners in the junior and open classes at other fairs.

Shows of this kind are very much to be commended as they do not appeal to the big men who are making showing a business. They allow the neighbors to get together and compare animals, fruit or whatever interests them, and their educational value is very high. They promoted a spirit of friendly rivalry which in time often leads to a complete revolutionizing of methods on some farms in order to outdo the neighbor, and they work very much to the benefit of the revolutionizer.

TRADE MARK SUPERIOR

They'll give you superior work if you'll give them "Superior Harness"

Your horses will work with a will if you outfit them with the right kind of harness.

When you select Superior Brand Harness you pick the finest product that experience and skillful workmanship can produce. You have the satisfaction of knowing that the set of Superior Harness you select is the finest that money can purchase and that you are getting full value.

The Lichtenberger-Ferguson factory is the largest harness plant in Western America and produces every approved type of harness required by the Western horse.

## Livestock News Notes

### LIVESTOCK SALE CALENDAR

**November 16, Dispersal, Arthur & Maxfield Holstein Co., Hanford.**

The United States civil service commission announces open competition for position as senior dairy herdsman at Jeanerette, Louisiana, applications for which close December 5. Competitors will not be required to report at any special place for examination but will be rated up on a sworn statement as to former training and experience. Applicants from this district should ask for Form 1312 from the custom house at San Francisco. The pay is $1500 a year at the start with a chance of a bonus of $20 a month for satisfactory services.

Under the heading, "New Jersey's Loss, California's Gain" the latest Guernsey Breeders Journal published at Peterboro, New Hampshire, devoted considerable space to Prof. Wm. M. Regan who has come to assume the position of head of dairy production at the university farm, Davis. The article carries with it the best wishes of Eastern breeders who desire to see Prof. Regan succeed in his new field.

Barring accident, Vive La France, the wonderful Oregon Jersey cow, will complete her sixth consecutive test on January 1 with about 940 pounds of butter fat. If she does this her total for six lactation periods will be 5,354 pounds butter fat or an average of 892 pounds for each year.

"Twinkle" Starr who was in charge of the show herd of Ayrshires from the H. G. Ranch won the herdsman's prize of $25 at the state fair for the best kept barns. Starr made a fine showing all the way down the line, and everywhere his exhibit was one of the best kept and most pleasingly decorated on the grounds.

The American Jersey Cattle Club reports a number of new members from California to its Jersey Calf Club Organization, membership in which requires but one thing of a boy or a girl under 16, the ownership of a registered Jersey, the age and sex being of no import. The new members from California are Daniel Conant and Ruth Wilson of Modesto; John and Bertha Meier, Hickman; Lee Diedrichsen and Darrel Flowers, Ferndale; Mildred Gurnett, Charles and Max Krause, Orland; and Luther and Morris Hubbard of Turlock.

C. B. Harris reports sale of a herd of 41 head of registered Herefords formerly owned by Howard Tilton in San Jose, to the Santa Margarita Ranch in San Luis Obispo County.

### TURLOCK'S PORK DAY

Pork Day held at Turlock under the auspices of the Merced and Stanislaus County farm bureaus on October 31 was voted a decided success by more than a thousand people who attended. Over 500 hogs were entered and first prize on the entry of 35 hogs went to E. G. Stone of Fairview. F. L. Hogue, Modesto, won on his Durocs. E. G. Stone was second, Alexander Carlson of Youngstown was third with Poland Chinas. R. Mayfield of Riverside was fourth and fifth with Durocs and H. A. Stammerjohan of Turlock, was sixth with Durocs.

There were seven entries in the Pig Club contest from each county. The

prizes went to Clay, Reuben and Lonney Stammerjohan of Turlock.

The price for the best 90 hogs weighing 185 pounds was $10.15. The balance sold from $10.10 down to $8.85 which was the price of 73 hogs averaging 227 pounds.

---

Thousands of acres were burned over by forest fires on the Las Posas and neighboring ranches in Ventura County.

HIGH CLASS

# Reduction Sale

## 60 REGISTERED HOLSTEINS

F. L. HOGUE

Modesto, Calif.

## Tuesday, Dec. 5

At 10 A.M.

In order to reduce the size of his rapidly increasing herd of registered Holsteins, F. L. Hogue will sell at public auction upwards of 60 choice females.

This sale will positively contain every cow of milking age in the herd, that is in desirable sale condition.

Every animal in this sale has passed three consecutive tuberculin tests, and sells subject to retest by the buyer.

Write for catalog or other information about this choice offering to the sale management.

### CROP AND LIVESTOCK NOTES—(OCTOBER 15-31)

By E. E. Kaufman, California Cooperative Crop Reporting Service

Since the last report on October 16 there has been a steady improvement in the condition of pastures throughout the northern part of the state. In the southern half of the state natural pastures were becoming very dry and supplying but little feed. Rains on the 27th and 28th, varying from three-tenths to seven-tenths of an inch, will soon bring about an improved condition. Alfalfa pastures have been good and furnishing considerable feed. Livestock is generally reported in good condition with steady prices and prime killing cattle scarce.

The car situation shows very little change the past fortnight. Shipments have been averaging better than 500 cars a day. Reporters vary in the percentage of the grape crop still left on the vines. In most districts the crop is pretty well cleaned up—Lodi reporting the highest percentage of grapes remaining to be moved. More than half of the Emperor crop in the San Joaquin Valley is yet to be shipped. For the state as a whole, there is probably from 15 to 20 per cent of the crop still left on the vines.

The rice crop is being cut and threshed as rapidly as possible. Butte County reports at least 50 per cent of the crop in the shock with about 25 per cent of it threshed. About the same progress is noted in other localities, except Yolo where the percentage is much higher. There is no material change in the expected yield per acre which has been forecasted at about 30 sacks.

The Imperial Valley reports barley crop planted and coming up nicely. The recent general rains will make fall plowing and seeding possible in other parts of the state. Threshing of the bean crop in Southern California is practically completed, while in the interior valleys the crop has been cut but a large part is still unthreshed. Yields somewhat disappointing as lower than estimated. It is expected the first shipment of oranges from the Porterville district will be made about November 10. A short drive north and east of Sacramento indicated severe damage to tomatoes and pumpkins on account of heavy frost the morning of the 30th. Beans not fully matured were also damaged. The acreage of beans not yet ripe, however, is very small.

### PRIZES FOR DAIRY SHOW

Numerous special prizes are being offered for various exhibits, and unique features in connection with the forthcoming Pacific Slope Dairy Products Show at Fresno, November 13-18. Many of these prizes were obtained during the visit of a committee interested in the show at the National Dairy Show in St. Paul. This committee was composed of George W. Prising of San Francisco, Sam H. Greene, secretary-manager of the California Dairy Council, and C. L. Roadhouse, manager of the Pacific Slope Show.

There are prizes to exhibitors, plant managers, to counties and commercial exhibitors, as well as to school children. For instance, the show management has just decided upon a new $50 school essay contest, entitled "What I Saw at the Pacific Slope Dairy Show." This contest is to be held under the supervision of J. W. Cooper, superintendent of Fresno schools.

The premium list which is now being sent out contains a full list of the special prizes as well as the regular prizes. Some of the more important ones are listed herewith:

Amongst the prizes are: four specials totaling $50 for butter; specials for cheddar cheese, market milk, raw, market milk pasteurized, certified milk, milk for manufacturing, vanilla ice cream, for dairy inspectors, most attractive display of dairy products, most attractive booth, chamber of commerce, most suitable and entertaining program presented by club organization, oldest dairyman on the Pacific coast, milk plant managers bringing largest number of employes to show, creamery managers bringing largest number of dairy manufacturing employes to show, cow testing association, school essay contest, butter maker.

Dr. C. L. Roadhouse, manager of the show, reports that more county exhibits than were expected will be on display at the show. Some of the counties which are now actively preparing to exhibit are Sacramento, San Joaquin, Stanislaus, Tulare, Kings, Fresno, and Humboldt. It is expected also that Los Angeles, which has made a remarkable record in butter fat production, will have a display on hand.

The premium list is now on the press and will be in the mail in a few days.

---

Boring will begin soon on the site tentatively selected for the Pine Flat dam in the narrows of the Kings River four miles west of Piedra.

# Absolute Dispersal

## Arthur & Maxfield Holstein Co. Herd

## 70 Registered Holsteins 70

## at Public Auction, Wednesday, November 15, 1922

Kings County Fair Grounds,
Hanford, California

To terminate the existing partnership between J. W. Arthur and Wm. G. Maxfield their splendid herd of registered Holsteins will be sold to the highest bidder at public auction.

This is an unusually attractive herd of cattle, among some of their accomplishments the following are noted:

HIGHEST PRODUCING purebred herd in Kings County Cow Testing Association, with an average of 439.23 lbs. butterfat from 13,595 lbs. milk on 21 head, in a ten months' test.

HIGHEST 7 DAY RECORD in Kings County, over 33 lbs. butter on official test.

HIGHEST 365 DAY SEMI-OFFICIAL RECORD in Kings County, with over 1,100 lbs. butter.

HIGHEST PRODUCING COW in Kings County Association, with 702.6 lbs. butterfat from 20,375 lbs. milk in ten months.

THIS ENTIRE HERD HAS PASSED TWO CONSECUTIVE TUBERCULIN TESTS WITHOUT A SINGLE REACTOR.

If you want high producing cows, or heifers and bulls from such cows, make your plans now to attend this sale. It is a choice herd of cattle in excellent physical condition.

TERMS OF SALE: One-third cash, balance in 3, 6 and 9 months to responsible parties who arrange for terms prior to sale with California Breeders Sales and Pedigree Co.

**Holsteins—For Sale**—Jane Garden Nero Abbekirk, a son of Sir Aaggie de Kol Acme out of a 34 pound cow. Also two of his sons, and several high class females, registered and grade. Derryfield Farm, Capital National Bank Bldg., Sacramento.

**Guernseys—Grape Wild Farms—Berkshires**—Young bulls, from calf age up to 16 months old, of May Rose breeding and out of A. R. cows. Bred sows and gilts, service boars and pigs of both sexes for sale. Grape Wild Farms, Escalon, California. A. B. Humphrey, Proprietor.

**Shorthorns bred for range purposes and** of Pure Scotch Blood Lines. Show herd won highest honors in 1917. Visitors welcome; information cheerfully given T. T. Miller, Hollister, California.

**Yearly Record Holsteins**—Bulls from 500 to 1000 pound dams and by World Record sires. A. W. Morris & Sons, Woodland, California.

**Aberdeen-Angus Cattle**—Registered bulls; heifers always on hand. Everything priced to please buyer. Brook Hollow Farm, Hollister, California.

**High Class Bull Calves** for sale, from R of M Dams. Grant A. Brown, El Monte.

**Ayrshire Cows and Heifers** priced right. Send for photos, prices. Redwoods Ayrshire Farm, La Honda, Calif.

**Breeders of Registered Shorthorns**—Milk strain; choice young stock for sale. John Lynch Ranch, Box 321, Petaluma.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, California.

**Herefords—"Veramont Stock Farm,"** H. M. Barngrover, Prop., Stockton, California.

**Shorthorns**—Straloch Farm 2½ miles west of Davis, Calif., on Highway. C. Harold Hopkins, Woodland, Calif.

**Registered Herefords**—Anxiety IV strain. Breeding stock for sale. Chas. Rule. Duncans Mills, California.

## MISCELLANEOUS

**Tobacco**—Three year old Kentucky leaf. Pay for tobacco and postage when received. 3 lbs. chewing, $1.00; 4 lbs. smoking, $1.00; 7 lbs. No. 2 smoking, $1.00. KENTUCKY TOBACCO ASSN., Hawesville, Ky.

**Natural Leaf Tobacco.** Chewing 5 pounds $1.75, 10 pounds 3.00; Smoking, 5 pounds $1.25, 10 pounds 2.00, 20 pounds $3.50. Pay when received. TOBACCO GROWERS UNION, Paducah, Ky.

**Hemstitching and Picoting Attachment;** fits all sewing machines. Price $2.00. Checks 10c extra. Light's Mail Order House, Box 127, Birmingham, Ala.

**Smoked Salmon—5 pound box, $1.25; salt** salmon bellies, 5 pounds $1.25, delivered by mail. Coffin Fish Co., Seattle, Washington.

**For Sale**—Guinea Pigs in small or large number, all of good stock. J. W. Plate, Delhi, California.

## TURKEYS

GIANT BRONZE TURKEYS

Large turkeys can be raised at practically same cost as small ones. It is in the strain. One of our toms will give you five more pounds of meat to market in all his get the first year; besides vitality and beauty.

GOLD NUGGET STRAIN
J. Will Blackman, Originator

Again prove their superiority by winning at California State Fair, September, 1922. Gold Special Sweepstakes for best turkeys in the show. All breeds competing. In open class they won 1st old tom, 1st and 2d yearling tom, 1st and 3rd yearling hen. This, along with practically every Gold Special Sweepstake at the West's greatest shows since 1915, prove that they have

AN UNEQUALED RECORD

Toms and hens for sale. Book orders now for December delivery as each year we are sold out early.

BLACKMAN & MUMFORD
609 East Third St., Los Angeles, Cal.

**For Sale**—Bourbon Red Turkeys of large size and good markings. Young Toms and Pullets, also a few yearling hens. Henry E. Hill, Route C, Box 132, Hanford, California.

**Turkeys**—Purebred Giant Bronze. Goldbank-Copper King stock. Madison Square Garden's winning strains for sixteen years. Bronze King Farm, Merced, California.

**For Sale**—Fine turkeys for breeders. Toms and hens. Gold Nugget stock. C. W. Young, Route 2, box 106, Whittier, California. Telephone 7694.

**For Sale—Wild Turkeys**—Best, cheapest, most certain and indispensable producers. Cash deposit secures stock. Blanche Dresser, Route C, Box 194, Tulare, Calif.

## SHEEP

**Hampshire Sheep**—Straloch Farm 2½ miles west of Davis, Calif., on Highway. C. Harold Hopkins, Woodlands, Calif.

## PATENT ATTORNEYS

**WEBSTER, WEBSTER & BLEWETT, Savings and Loan Bldg., Stockton, California. Established 50 years. Send for free book on patents.**

### TREES

**Get My Prices on Japanese persimmons,** Kadota and Black San Pedro figs, Concord grapes, Muscats, Malagas and Thompson Seedless, rooted and Black Monukka cuttings. Nursery stock growing at El Monte, and Vista near San Diego. Easily accessible to Southern planters. Good stock at right prices. Fred W. Kelsey, El Monte, Cal.

**Grafted Walnut Trees** on Northern California black roots, scions carefully selected from best bearing parent trees, grown under expert supervision. First class in every respect. Placentia perfection, Eureka, Payne. Reasonable prices. Los Nietos Valley Nursery, Downey, California. Phone 692.

**Fruit Trees and Grapevines**—Still have unsold few varieties grapes grafted on resistant root. We ship all stock on approval, if not entirely satisfactory return at our expense. Write for our special prices. J. F. Miller & Sons, Healdsburg, California.

**For Sale**—Florida Sour Orange Seed Bed Stock, from fruit growers seed. All leading varieties avocados, grafted Placentia walnuts. Mathers' Avocado Nursery, Pasadena. P. O. Box 585. Phone Colorado 6044.

**Trees and Plants**—All kinds, Berries and Small Fruits a specialty at lowest prices. Over 25 years in business. Send for price list. M. J. Moniz, Berry Specialist, P. O. Box 264, Sebastopol, California.

**Figs For the Fresh and Canning Market**—Best kinds to plant. Get the benefit of our thirty years experience with figs and all other California fruits. W. T. Kirkman, Sr. Pasadena, California.

**For Sale Grafted Walnut Trees** for seedrus and deciduous trees. Order now for 1922 delivery. Get my prices. Ketscher's Nursery, 1101 E 4th Street, Santa Ana, California. Phone 572-W.

**Catalogues and Booklets,** office forms and correspondence stationery for the nursery, seed and florist trade; half-tone cuts of many standard plants. Correspondence invited. The Kruckeberg Press, 236 Court St. Los Angeles.

### PIGEONS

**White King Pigeons** unmated pairs $3.00. mated pairs, $5.00, and Pearl Guineas $5.00. Paradise Valley Poultry Ranch, National City, Cal.

## FUNCTIONS OF AN AGRICULTURAL COLLEGE

(Continued from Page 501)

It should be charged with all three lines of endeavor. I am convinced that with rare exceptions we get the best teaching from those who are also devoting some time and attention to research.

The college of agriculture does not exist for the sole purpose of solving the problems of the farmer any more than it exists for the sole purpose of training young men to follow the occupation of farming. Rather does it exist for the purpose of solving the problems of agriculture and for the education of young men and young women in agriculture and for the highest type of rural citizenship. A public institution supported by public funds, it should be concerned with the development of the agriculture of the state and nation to the end that, this, our basic industry, may be placed upon a sound and prosperous basis and the welfare of all of the people of the state be thereby promoted.

The modern agricultural college is not a professional school like the college of law or medicine. It is a collection of professional schools. It prepares for scores of vocations, some of them as dissimilar as law and medicine. A recent survey of the graduates of an eastern agricultural college disclosed the fact that while 88 per cent of its graduates were making direct use of their training in agriculture, a record of which any professional school might well be proud, they were following in total no less than 76 distinct occupation.

The modern agricultural college also differs from the college of law or of medicine in that it is more than a professional school. Its curriculum must also provide, in so far as time will permit, for the farmer who may be asked to represent his constituents on the board of supervisors or in the legislature, or who in his leisure hours wishes to read his daily paper intelligently and find pleasure in human affairs. Courses in economics, sociology, psychology and history are just as important in the education of a farmer as in that of a lawyer or a physician. The foremost colleges of law and medicine are now requiring their students to have this training for citizenship before they begin their professional course. Perhaps the time has not yet come when similar requirements can be made of those who are preparing themselves for an agricultural career. Until it does we must provide for such courses within the agricultural curriculum. It may be argued that this is impossible, that the agricultural curriculum is already crowded. But I wonder if we do not have too many detailed courses in many of our divisions and if we could not save much time for the student, as well as for ourselves, if we would give some serious thought to the consolidation of some of our courses and the concentration of the subject matter.

Granting that the primary object of the agricultural college is the training of men and women for farm life, I wonder if we would not be doing that better were we to give in our courses of instruction less consideration to the presentation of information and more to the development of the habit and desire for real thinking. We may well leave the acquisition of some of this information to the student himself if we will acquaint him with the literature of the subject and train him properly to appraise the value of such information as is available and how to use it after he has obtained it.

It is significant that in the survey of the graduates of the eastern agricultural college to which I have referred the graduates themselves did not ask for more courses in animal husbandry, horticulture, agronomy, dairying or other technical subjects. On the other hand they did regret that they had not taken more courses outside of the technical fields. Perhaps the fault was theirs. Perhaps they could have used their time as students to better advantage and made a wiser selection of their courses. But their statements that the omission of practical English, public speaking, business law, history, economics and civics is a handicap in later life is one to which members of the faculty of this and other colleges of agriculture may give serious thought and consideration.

The agricultural college has come to occupy an important place in our educational system. These institutions have done and are doing an important work. If what I have said appears to be a criticism it is not directed at any particular institution. It is only that I feel that occasions such as this are not the time for boastful felicitations of our accomplishments, but rather the time for taking stock of ourselves to the end that the college may best accomplish the purpose for which it exists—the development of the agriculture of California.

## HINTS FROM HOUSEKEEPERS

(Continued from Page 507)

Easy Way Jam—Select firm fruit, well ripened. Mash, let drain till all water is off. Run through a food grinder or mash thoroughly with wire potato masher. Be sure that all berries are mashed well. Then take cup for cup of sugar and fruit mix well and put in glasses. No paraffine needed as sugar forms crust on top. The essential thing is to be sure the sugar is well mixed. I stir with a large spoon, beating as for cake, every few minutes till I think the sugar is well dissolved, then put in glasses. I have kept jam made this way two years and the flavor was not impaired nor was the color.

It is late for jams this year but now is a good time to make up our minds to try new ways. I am sure those who try this will never go back to the old way or sun-made kind. Just remember to thoroughly mash fruit and mix sugar especially well. I call it the Easy Way Jam.—E. M. Lane, Atascadero.

## DECIDUOUS PRUNING DEMONSTRATIONS

Although the long pruning system has been shown at demonstrations in the principal deciduous fruit districts of Southern California for the past four years, a survey of the orchards during the present season has indicated that many growers have not yet fully understood the details of this method of pruning. The most glaring mistake has been the leaving of too much wood in the trees with the result that too much fruit is set and considerable breakage and small sized fruit has resulted.

As a means of emphasizing the proper methods to use in adapting the long pruning system to conditions occurring in the deciduous districts of Los Angeles County, the agricultural extension service has arranged for a series of 14 field meetings which will be held in cooperation with the deciduous growers department of the farm bureau and the farm bureau centers in all deciduous districts.

The schedule for the series which will be conducted by Assistant Farm Adviser V. F. Blanchard is: Monday, November 13, 10 A. M., Downey; 2 P. M., Pomona. Tuesday, 10 A. M., Pasadena; 2 P. M., La Canada. Wednesday, 10 A. M., Lankershim; 2 P. M., Van Nuys. Thursday, 10 A. M., Mission Acres; 2 P. M., Zelzah. Friday, 10 A. M., Owensmouth; 2 P. M., Chatsworth, Monday, 10 A. M., Burbank; 2 P. M., Roscoe. Tuesday, 10 A. M., Arcadia; 2 P. M., Baldwin Park.

# NITRATE OF LIME

TRADE MARK

## GROWERS!

**To Secure Better Set, and to Secure Better Fruit Use Nitrate of Lime.**

## It Pays to Use NITRATE OF LIME Because:

It contains 13% nitrogen, equivalent to 15.8% ammonia,

**in the most available form**

It does not contain any ingredients detrimental to soil or plant life—on the contrary it supplies the soil with about 30% soluble lime, which is a valuable adjunct to the nitrogen.

It is quick acting as it absorbs moisture and dissolves completely.

**Nitrate of Lime** is packed in strong wooden barrels to prevent waste and caking.

Write for booklet—free—giving complete information and telling how **Nitrate of Lime** is produced.

# How to Keep Eggs Clean

By J. H. Barber, General Manager Poultry Producers of Central California

ALL eggs are clean when they are laid and it is very desirable that they be kept so. In practical poultry farming it is not possible to keep every egg absolutely clean, but by careful attention to a few simple details it is entirely possible to reduce the number of dirty eggs to a very small percentage. These details deal with housing, nests, yards, sprays and the gathering of eggs.

### Houses

When hens are housed in small colony houses it is impossible to avoid having a large quantity of dirty eggs, especially in wet weather, on account of the lack of proper shelter. Something may be done by having separate laying houses and keeping floors covered with plenty of clean, dry sand or litter, but in wet weather it is practically impossible to maintain a clean, dry floor covering and it may be safely said that it will not be done. Anyone who expects to continue in the poultry business and to make it pay should abandon the colony house system as soon as possible and build modern large houses.

With houses large enough so that the hens can be confined during wet weather and still have plenty of room and opportunity for exercise, the problem is much simpler. When it rains and at all times when the ground outside is muddy, the hens should be kept indoors until late in the afternoon when all the eggs are laid. They may then be let out for exercise before going to roost.

The floor of the house should be naturally dry, that is, either a board or concrete floor, or, if a dirt floor, it should be raised or otherwise protected so that water can not run in on it from outside. It should be kept clean and covered with a thick layer of clean litter. Straw is probably the best litter, but shavings or any other material that will answer the purpose may be used. The important thing is that the litter should be always dry and reasonably clean. Sand may do if plenty of it is used and if it is kept dry and loose, but is not as good as straw or similar material. When the litter is cleaned out, the floor under it should also be scraped clean.

Dropping boards should be cleaned at least once a week. The practice of cleaning them every morning has everything to recommend it and should be followed wherever possible. Roosts should have wire netting immediately under them to keep the hens from getting onto the dropping board. The houses should be so located and constructed that rain can not beat in.

### Nests

The location of the nests in the hen house is of utmost importance. The hen has a natural instinct to seek what she believes to be a safe, quiet and secret place in which to lay her eggs, and if opportunity for this is given there will not be much trouble from hens laying on the floor or out in the yard. This means concealed, dark nests. These are usually constructed by building shelves against the wall, boarded up on the inside and covered over the top. The nests are arranged on these shelves, some making them face toward the wall and some facing them the other way. In either case the entrance is at the end of each shelf. The board covering is arranged so that it can be opened to get the eggs. The nests themselves or the nest partitions are preferably made movable so that they can be taken out for cleaning and disinfecting. It is a good idea to place the nests as far as possible from the entrance to the house so that the hens will have to walk some distance through the litter when going to the nests from outside and will thus clean their feet before going on the nests. A separate nesting room or compartment at one end of the house with the entrance to the house at the other end gives very good results, the floor of the nesting room being covered with plenty of dry litter.

Plenty of nests should be provided; one nest to every ten hens is a good allowance. Where there is an abundant number of darkened nests each hen will usually take a separate nest, and thus fighting and scrambling around in the nests, which causes a great many checks and broken and soiled eggs, will be avoided. The nests should be large enough to accommodate one hen, but not two. A good size is about ten inches square. Old coal oil cans with the side cut down part way and rolled over make good nests because they are easily kept clean and do not provide much opportunity for the breeding of mites and fleas.

There are four kinds of nest material in general use, namely, straw, shavings, shells and sand. Shavings are probably the best of the four, provided spruce or pine shavings can be had. Redwood shavings should not be used, as they are apt to stain the eggs. Straw inclines the hens to scratch in the nests and also makes yellow stains on the eggs when any dampness is present. Shells if left long in the nest, will break up into a fine dust and make smeary eggs. They should not be used unless they can be renewed frequently enough to keep them in good condition. It is sometimes argued that shells prevent the breeding of fleas, but this is not the case unless they are frequently removed and the nests sprayed or doped. Sand is not desirable because, like pulverized shells, is makes smeary eggs. Rice hulls are recommended by some, but not much experience has been had with them as yet.

Nests should be cleaned often. Some poultrymen clean the nests only three or four times a year, while others clean them every week. The important point is that the nests and nest material should at all times be clean. It is a good idea when gathering the eggs to notice if there is any dirt in the nests and to remove it immediately, also it is good to keep some nest material handy in the houses so that a little fresh can be added whenever necessary. If the nest material is right at hand this will be done, while it might not be done if the material had to be brought from a distance. If the nests are regularly cleaned once a week and the material then removed, this, with the regular attention to dirt each time the eggs are gathered, will usually be found sufficient.

In spraying nests for mites or fleas, the heavy oil sprays should not be used, because they will remain damp for some time and will soil and also taint the eggs. If a light oil spray is used in the late afternoon, the nests left to dry over night and the nest material replaced in the morning, good results will be had. A water spray with 10 per cent of crude carbolic acid has been used with good effect instead of the oil sprays.

Broody hens should be always picked up from the nests every day, because they will fight the other hens in the nests, with the almost inevitable result of broken eggs. Another thing, if the broody hens are picked up and put in the broody coops as soon as they get broody, they can be easily broken up and will go back to laying, whereas if they remain on the nest for several days the broody condition becomes confirmed and they will not go back to laying for a considerable time.

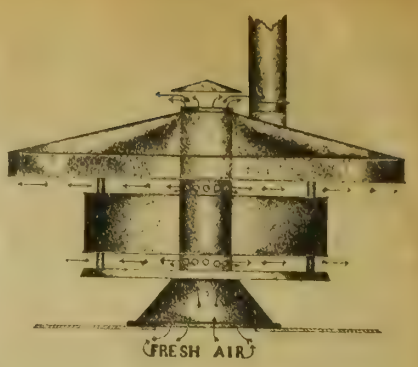
### Yards

If the hens are kept in the houses, as suggested above, when the ground is wet or muddy, the condition of the yards is not so important, except that the litter in the houses will need changing oftener on account of the dirt tracked in by the hens when they are let out. Light sandy soil naturally causes less trouble in this respect than the heavier soils.

There are, of course, other reasons for giving attention to the size, the cleanliness, the drainage, the cultivation and the cropping of yards, but these need not be considered here.

### Gathering the Eggs

For best results the eggs should be gathered as frequently as is practicable, and not less than twice a day, especially in warm weather. The more



# BROODER STOVES

Our LATEST Catalogue No. 70 is ready to be mailed FREE to any address. You want to brood your chicks around a stove that will furnish WARM, DRY, FRESH AIR. "PRIDE OF PETALUMA" furnishes this condition. FUEL is AUTOMATICALLY controlled, SAFE, RELIABLE and HIGHLY EFFICIENT.

THE G. E. CONKEY CO. 8586 Broadway, Cleveland, Ohio

eggs there are in a nest, the greater the liability to breakage. Moreover, in warm weather if an egg laid in the morning remains in the nest all day with successive hens sitting on it to lay more eggs, its quality is certainly not improved and it is more liable to be soiled either from the hens or from breakage. One thin-shelled egg getting broken in a nest may soil half a dozen others.

# Poultry Queries

**(Conducted by Jean A. Koethen)**

### Barred Rock Journal

Will you please send me the address of some good poultry journal that features Barred Rocks, or, if there is none, of some good poultry magazine? Subscriber, Porterville.

There is no journal that features Barred Rocks exclusively. I think you will find more space given to Plymouth Rocks in the American Poultry Journal, 523 Plymouth Court, Chicago, than in any other.

### Planting Kale

When is the best time to plant kale? —Subscriber, Claremont.

Kale is very hardy and can be planted at any time.

### Enlarged Liver

Our Barred Rock capons have been on alfalfa range till two weeks ago when we confined them and put them on a ration of corn and wheat with some watermelon and sweet potatoes. One was found dead, and examination showed a greatly enlarged liver. How shall we prevent a repetition of this case?—Subscriber, Modesto.

That enlarged liver was due to a too fattening diet and lack of exercise. It is better to keep them on the alfalfa at least a part of the time. Instead of a hard grain diet keep a mash before the birds, or, if you are preparing to market them soon, give a moist mash twice a day. For this fattening mash equal parts bran, cornmeal and middlings or ground oats, moistened with sour milk, is very good. Give grain in the evening only. You do not say how liberally you have fed sweet potatoes. They are too fattening for a regular diet. Probably your birds missed the green feed, also. When they are confined cut alfalfa should be kept before them.

### Cottonseed Meal

I mix my hens' laying mash. Can I use cottonseed meal and get better results? If so, how many pounds to the ton?—Subscriber, Gardena.

Whether or not you use cottonseed depends on what meat and vegetable protein you are already using. Soybean meal is the preferred vegetable protein when only one kind is used. If you use another it may be either cottonseed, linseed oil cake, coconut oil cake or peanut meal. According to the formula used this year at the farm bureau egg laying contest at Santa Cruz, a ton of mash should contain 600 pounds wheat bran, 400 pounds wheat middlings, 250 pounds ground oats, 250 pounds corn meal, 100 pounds soy bean meal, 100 pounds linseed or cottonseed meal, 150 pounds fish scrap and 150 pounds meat scrap. This is a very rich mixture and requires a good deal of cracked corn to balance it. The grain mixture used at Santa Cruz consists of 20 per cent recleaned barley, 30 per cent plump, whole wheat, and 50 per cent cracked yellow corn, with a generous feeding of sprouted barley in the evening. I do not know that there are different qualities of cottonseed meal.

### Turkey Literature

Can you tell me where to find a good book or other literature on turkey raising?—Subscriber, Turlock.

There is very little. You might write the Rhode Island Experiment Station at Kingston, R. I., for bulletins on the feeding of turkeys with reference to blackhead. I think I am not exaggerating when I say the Cultivator is the only magazine in America that is actually trying to solve the problems of turkey growers.

### Hens Don't Lay

My hens are not laying well. Some are one and two years old, others are pullets of February hatch. All seem healthy and only a few have withered combs. I feed milo in the head in the morning, all they will eat, scratch feed at noon, wheat and barley at night. A commercial egg mash is before them all the time.—Subscriber, Pixley.

Your hens are getting too much hard grain. It is the mash that makes eggs. You are letting them fill up on grain, which makes fat instead of eggs. If you watch you will probably see that they are eating very little mash. A quart of grain daily for 15 hens is usually allowed, and the poultry division advises the use of even less when heavy laying is demanded. If you feed the grain mixture only for supper (that is, late in the afternoon) and sprouted

Turn Stump Land Into Money

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Start Your Pullets and Moulted Hens to Laying

You have had your summer's poultry cares.

Now is the time for you to cash in on eggs.

Go after those dormant egg organs that moulting threw out of gear.

Go after them with the "Old Reliable"

Dr. Hess Poultry PAN-A-CE-A

Pan-a-ce-a puts the egg organs to work.
It starts the feed the egg way.
Feed Pan-a-ce-a—then you will see red combs and red wattles.
It brings back the song and scratch and cackle.
It gives hens pep.
It makes music in your poultry yard.
That's when the eggs come.

Tell your dealer how many hens you have.

There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

GUARANTEED

1000 EGGS In EVERY HEN

If You Keep Chickens CUT THIS OUT

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. Yet, it has been scientifically estimated that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle; $5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1,000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how. If you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 2435 Herald Bldg., Binghamton, N. Y., and a free copy of "The 1,000 EGG HEN" will be sent by return mail.

We Guarantee 100% Fertility in All Hatching Eggs

By Replacement of Infertile Eggs

We are now booking orders for hatching eggs and baby chicks from Emerson & Martin exhibition W. Leghorns, also the heaviest egg-laying strains in America and England. It will pay you to arrange for yours now. Make a 10% payment and know that you will have them when you want them.

Our heavy commercial egg-laying hens are mated up to males from Emerson, Martin, Tancred, Hanson of Oregon, Hollywood Farms of Washington, Barron, Ferriss and Hillview Farms of Illinois. Why don't you arrange for some of each. Let us toe punch the chicks and see which produces the type of hen you like best?

HATCHING EGGS—From Nov. 1st to April 1st, 15 for $2.00. In 100 lots, 12c each. In 500 lots, 11c each. In 1000 lots, 10c each. BABY CHICKS—January, February, March. In lots of 100, 25c each. In lots of 500, 24c each. In lots of 1000 or over, 23c each.

WE ALWAYS HAVE THREE, FOUR, FIVE AND SIX MONTHS OLD PULLETS FROM PEDIGREED TRAPNESTED STOCK.

The California White Leghorn Breeding Farms

LANKERSHIM, CALIF. R. R. 1—Box 277

Located three miles north of Lankershim, on Lankershim Blvd., then two blocks west on Tulare St. (Tulare St. is the first street north of S. P. tracks.)

You are welcome on our farms any time. Go north through Lankershim on Lankershim Blvd. to Tulare Street, turn west. You can't miss it.

### LIVESTOCK

(Quotations furnished by Federal-State Livestock Market News Service, 1014 Pacific Finance Building, based on prices off cars at Los Angeles.)

Cattle: The opening of the new Union Stockyards at Los Angeles, November 1, was marked by spirited bidding by local packers on the many shipments of good cattle. An extreme top of 9.00 was scored on 25 Idaho steers, averaging 1056 pounds. These were exceptionally well finished and were sorted from a herd of good cattle. A shipment of 1174 pound bullocks from Jackson Hole, Wyoming, went at 8.50, with other lots of good steers the opening day from 8.00 to 8.35. A weaker tone developed on following days. Thursday's top was 8.00 paid for 19 good Wyoming steers, averaging 1050 pounds and 77 head, averaging 1040 pounds. A string of 115 plain Texas steers, averaging 918 pounds brought 7.40 and 8 cars of Colorado grassers went at 7.30. Medium Wyoming steers Friday cleared at 7.25 and 7.50, with common Mexican steers at 5.25 and "cutter" steers as low as 4.50.

Outlet for fat cows was fairly active, with an extreme top the opening day of 7.00. Several loads the same day went around 6.00 to 6.50, but 6.25 was the top at this week's opening, with several sales at 5.25 to 5.75 and common Arizonas as low as 4.00.

The demand for feeders has slackened. Bulk of the Arizona crop has either been contracted or delivered, largely at 5.00 to 5.25. A string of 38 selected Montana feeders, averaging 803 pounds, sold to Imperial Valley interests at 6.25. Forty-eight 651 pound Arizona feeders scored 5.50.

Calves: The few arrivals of calves found ready outlet at firm values. An extreme top of 8.25 was scored on sorted 237 pound Arizona calves, with load lots of 24 pounders at 7.35 to 7.50, heavies at 7.00.

Hogs: Very few native California hogs are being slaughtered, due to scanty supplies in this part of the state. The few loads of strictly good 160 to 200 pound porkers sold both at the yards and at local plants largely at 11.00 to 11.50. Heavy hogs and packing sows went at the usual discounts.

Sheep and Lambs: Receipts of sheep and lambs at the new yards were considerably smaller than trade requirements and a strong tone prevails. Choice wooled lambs are conservatively quoted at 13.50 to 13.75. A string of 73 pound Utah lambs, shorn 60 days ago, brought 13.25 last Wednesday. Medium quality wooled lambs went at 12.75 and common kinds down to 9.00, culls at 6.00. Fat 124 pound wooled ewes scored 6.75, with others at 6.50, culls at 3.50.—Nelson R. Crow, local representative.

### POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, November 7 by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

Potatoes: Demand and movement moderate, market steady. Northerns: Rivers, 1.75@1.85; poor, low as 1.50 cwt. Idahos: Russets, 1.65@1.85; mostly, 1.75 cwt. Sweet Potatoes: Locals: Nancy Halls, 2@2; Jerseys, 2@2½ lb. Northerns: Nancy Halls, 3 lb.

Onions: Demand and movement moderate, market firm. Stocktons: Yellow and White, 2.00@2.25 per cwt. Locals: Whites, 60@75; Spanish, 75@90 lug; Lompoc, fancy large sizes, 2.50 cwt. Garlic: Mex. and Northern, best, 8; poorer, 7.

### VEGETABLES

These are the actual prices obtained between 7 and 8 o'clock, November 7 by wholesalers in their sales to retailers, pedders, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Artichokes: Doz., 1.25@1.50; small, 1.00.

Beans: San Pedro: Kentucky Wonders, 7@8; Limas, 6@6½.

Bunched Vegetables: Per dozen bunches: Turnips, carrots, beets, 30; parsley, onions and radishes, 15; spinach, 25; parsnips, 40.

Cabbage: Market steady, quality generally good. Field cr., best mostly, 2.75@3.25.

Cauliflower. Per doz., 1.25@1.50; few best, 1.75.

Celery: Movement moderate, market dull. Wide range in quality and prices. Locals: best, 2.25. Northern, 3.50@4.50 crate according to quality.

Cucumbers: Locals, few best, 2.25@2.50; mostly, 2 per lug. Southern, 2.60@2.75 per lug; 1.75@2.00 per flat.

Eggplant: Local, 3½ lb.

Lettuce: Market steady. Locals: Ordinary, 90@1.00; best, 1.25.

Okra: Lb., best, small, 12@14.

Peas: Best, Northern, lb., few best, 12@13; poorer, 8@9.

Peppers: Locals: Bells, mostly, 6@7; Chilis, 4½; pimentos, 3½; Cherry Chili and Floral Gem, 12@13.

Sacked Vegetables: Per sack. Beets and Carrots, 1.00; Turnips, 1.25.

Squash: Market steady. Locals: Summer, lugs, 75; Italian, lugs, 1.25; Hubbard, 2 lb.

Tomatoes: Demand moderate, movement slow, market dull. Local: lugs, ripe best, 1.00@1.10; poorer, 75@90.

### FRESH FRUIT

These are actual prices obtained November 7 by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc., as compiled by the U. S. Bureau of Markets. Terms, cash on the walk.

Apples: Demand and movement moderate, market steady. Northerns: Bellefleurs fancy, 3½ tier, 1.35@1.40; 4 tier, 1.35@1.45; loose, 3@3½ lb. Locals: Loose, Jonathans, 3½; Delicious, 5@6. Utahs: Jonathans, loose, 3½@4 lb. Winter bananas, 5 lb. Washingtons: Jonathans, packed, extra fancy, 2.15@2.25; fancy, 1.85@2 per box; Delicious, extra fancy, 2.50@2.75 box. Oregons: Delicious, fancy, loose, 7@8; poorer, 5@6 lb. Spitzenburgs, extra fancy, 2.40@2.50 per box.

Casabas: Local and Northern, 1.50@1.75.

Cranberries: Cape Cod, Early Blacks, 16 per barrel; 8 per half barrel crate. Late Howes, 20 per barrel; 10 per half barrel crate.

Grapes: Demand good, market unsettled. Locals and Northerns: Muscats, 4½@5; poorer, 3½@4; Missions and Zinfandels, 5@6; poorer, 3@4; Malagas, 4½@5; Tokays, 6@7; poorer, 4@5; Cornichons, 4½@5½; Black Moroccos, 6; poorer, 4@5; Red Emperors, 6@6½ lb.

Melons: Demand moderate, market dull. Locals and Northerns: 50@1.00 cwt. Persians: 2½@3 lb.

Pears: Demand good, market firm. Northerns and Locals: Bartletts, best, 7@8; ripe, 5@6.

Persimmons: Lb., 8@12.

Pomegranates: Lb., 6@8.

### CITRUS FRUIT

Grapefruit: Arizonas, 64-96 sizes, 5.00@5.50.

Lemons: Demand and movement light, market steady. Special brands, fancy, 9@10; choice, 6.50@8.50.

Oranges: Demand moderate, market steady. Valencias, special brands, $10@11 according to size.

### HONEY

Demand moderate, market steady with few sales. Many shippers waiting for advance in prices and not offering goods. Light movement of orange honey attributed in part to price differential over sage. Carlots for outside shipment range per pound—White Orange, 10@10½; White Sage, 9; Light Amber Sage, 6¾@7; Light Amber, alfalfa mostly, 7. Comb honey production in Inyo County considered below average in yield. Much of it has been sold. Several cars, all grades, reported moved at 2.50 per case, one car 60 per cent fancy went at 2.75 per case. For beeswax beekeepers are receiving 22 cents cash per pound.

### WALNUTS

Prices named by the California Walnut Growers Association on last Tuesday are: No. 1, 22½; No. 2, 17½, and fancy budded, 26. Last year's closing price for No. 1 was 27. The market opened at 24½, but only stood at that point for a day, strengthening immediately and moving up to 27.

### GRAIN

Prices L. A. Grain Exchange, November 6.

Barley 100 ton lots, November del., 1.55; Milo, 100 ton lots, November del., 2.00.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

**Prices quoted f. o. b. L. A. to producers:**

| | |
|---|---|
| Tame Oat | 20.00@22.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 8.00@10.00 |
| Barley Straw | 7.00@ 9.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around 23.00@25.00 as a fair average. No. 1 dairy is varying from 16.00@18.00. Standard alfalfa is not much in evidence. If sold it brings afound 12.00.

# San Francisco Markets

San Francisco, November 7, 1922.

### BUTTER

Sales on Dairy Exchange:

Following quotations carry a jobber-to-jobber discount of 10 per cent, plus a seller's handling charge of 2 per cent of net invoice:

| | |
|---|---|
| Extras | 47½ |
| Prime Firsts | 46 |

Prices Extras past week:

| November | 1 | 2 | 3 | 4 | 6 |

### ALMONDS

(Almonds same as last week.)

### HONEY

Star thistle nectar secretion over for season, with plants in good condition for next year. Car lots and less of No. 1

grade in 5 gallon cans reported sold at 8 cents per pound, No. 2 at 6 cents.

### BEANS

California Bean Growers Association selling prices, 100 pounds, for choice recleaned California beans (1922 crop) in carloads, f. o. b. California common shipping points November 4, 1922:

| | |
|---|---|
| Large Whites | 6.25 |
| Small Whites | 6.10 |
| Pinks | 6.70 |
| Mexican Reds | 5.75 |
| Red Kidney | 6.70 |
| Bayos | 7.40 |
| Henderson Bush Limas | 10.20 |
| Cranberry | 7.60 |
| Blackeye | 5.50 |

### HAY AND FEEDSTUFF

Under date of November 4, A. W. Scott Co. says: Receipts past week 870, 716 previous week. Tonnage on local market restricted by car shortage, values held at higher levels. Export and coast shipments brisk and well scattered, although volume has been greatly restricted by shortage of water freight space. United States government is now shipping a 2000 ton order for Panama, and in the market for their usual overseas shipments to Manila. Interior and country trade dull. Alfalfa has been doing better and prices ruling stronger, although the demand has been quiet and light. The reason for this is the difficulty of getting cars when feed is needed badly in some particular section.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.

## Citrus Markets

Los Angeles, November 8, 1922.

The citrus shipping year ended with Tuesday, October 31. The grand total of citrus fruit shipments was 40,099 cars. Of this amount the railroads report 39,499. There were shipped by water about 500 cars oranges and 100 cars lemons. Of Valencias there are between 300 and 350 cars yet to go. The early shipping sections will endeavor to supply some early fruit for the Thanksgiving market. New Navels are expected to go forward somewhat earlier than last year. Last year we reported on November 16 "New Navels now going forward, none yet being offered in the market."

The lemon year has proved far more successful than anticipated, the aggregate including water shipments being 10,000 cars.

### Shipments 1921-1922

Shipments of citrus fruits by rail November 1, 1921, to November 1, 1922:

Southern California, oranges, 24,086; lemons, 9,807; total, 33,893. For the preceding year, 1920-1921, oranges, 41,330; lemons, 11,584; total, 52,914.

Central California, oranges, 5,114; lemons, 109; total, 5,223. For the preceding year, 1920-1921, oranges, 6,676; lemons, 216; total, 6,892.

Northern California, oranges, 373; lemons, 10; total, 383. For the preceding year, 1920-1921, oranges, 305; lemons, 5; total, 310.

To the above should be added the 600 cars above referred to shipped by water.

Records of shipments of grapefruit have never been separated from oranges.

### Shipments for New Year

Shipments of citrus fruit to date since November 1, 1922:

Southern California, oranges, 217 cars; lemons, 65; total, 282. To same date last season, oranges, 197; lemons, 94; total, 291.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

The best yearling steers I have seen for years were a load from Wyoming that weighed 750 pounds average and sold to a local feed yard at 7 cents.

The large feeder steers have been selling from 5.50 to 6.50. The light cows have been, if fat, selling at 4 cents, and it takes a good cow to bring 5.50 to 6 cents.

So far the Los Angeles stockyard is the best priced heavy cattle market in the United States and a good lamb and hog market. Its feeder and stocker demand appears necessary to develop. A number of cars of various light cattle were shipped back, or on, rather than accept the slow sale, but Monday with some new buyers in evidence this tendency may change. As a matter of fact good quality feeders moved.

Things will, however, have to move faster and develop more, with cattle handled in much snappier fashion if great numbers of any but the local killing stuff are handled. It would appear the concentrated effort in the selling districts to persuade support and consignment was ill balanced without a corresponding effort among the districts that can use cattle and a general effort to attract buyers.

We would not have thought of trying to handle the country feeders by the ten thousands, in past years, without first arranging a place for the cattle, and in view of the general conditions the California buyers are being offered feeder and stock cattle at a lower valuation in some instances than they could have been bought for on the Arizona ranges, after a long expensive trip to get the catttle.

It is rumored certain financial affiliations of the livestock trade, banking, and other circles are arranging Imperial Valley and other loans and places to absorb feeders. This wil be fine if no strings are put on the beef that come in later, but with strings we will have something else to figure.

The calves seem to move well, at 7 to 7.50. I notice each day a few more prospective buyers, among local and suburban killers, and they are concentrated around the cheaper cows, steers and calves.

All this cheap stuff makes meat, and the 9 cent cow carcass from the 4 cent cow makes meat as surely as the 13 cent carcass from the 6.50 fat cow. A possible spread of 4 cents on carcass beef, steers and cows, holds all sorts of potentialities, and essentially in the end it's the carcass price that rules the live weight beef price.

One thing has already developed and that is a certain demand for pasture and alfalfa adjacent to Los Angeles within 100 miles, and preferably within 100 yards. Much of this feeder offering would have been absorbed at once at better prices if the range man had a temporary reasonably priced pasture to hold on until he made permanent range arrangements. Such a man can easily stand 10 or 15 or possibly 20 cents a day for holding up feed on a steer or cow but he can't stand 40 or 50 cents on this class of light cattle.

It is impossible for such a radical change in a marketing method as from buying on ranges to buying on a stockyards, to work out all at once as various problems must be met. Indications are everything will work out finely, though how great a market develops here must depend upon finance used, or various broad and well conceived policies, in trade and killing lines.

### POULTRY QUERIES

(Continued from Page 517)

barley or oats in the morning or at noon, keeping the mash before them and giving a good feeding of greens between 9 o'clock and noon, you will see better results. You might give the milo in the head for a treat once in a while. Those hens with the shrivelled combs are probably molting, but the pullets should be laying.

#### Overfeeding

I have recently lost about 35 of my 200 Barred Rock pullets with roup and now 12 more act as if they had St. Vitus dance, stagger when they walk and seem dizzy. They have all the sweet milk they will drink, a three-gallon bucket of prepared feed once a day, and the same amount of corn and barley twice a day. Have had no greens for three months.—Subscriber.

Overfeeding of hard grain together with the lack of greens is responsible for the condition of your hens. Keep the mash before them all day and give a mixture of corn, barley and wheat at night. As you have no greens you might sprout barley for the morning feed. It is not a very good substitute for greens but is better than all hard, dry grain. Do not feed more than a quart of grain daily for 15 hens. The roupy condition is probably caused by lack of sufficient ventilation in the hen house. Very likely there is overcrowding as well.

#### Lump on Neck

One of my fine Plymouth Rock hens has a large, foul smelling lump on her neck. She is laying and looks healthy. What shall I do?—Subscriber, Escondido.

The lump is probably an abcess due to some injury. If it seems to contain pus you had better open and wash with peroxide of hydrogen, half strength, then paint with tincture of iodine. If the lump is yellow, you may be able to wash out the poison with full strength peroxide, but be sure to use iodine whatever else you do. If she is not better in a few days, kill her.

R. J. Yates of Orland, one of the old stand-bys of the Poland China hog business, has introduced some new blood in his herd and has the best pigs this fall he has ever raised. Some of them weigh as high as 56 pounds at eight weeks of age and just in fine growing condition.

Clothing Prices Reduced

$45 and $50 Suits Now $33

Mr. I. E. Selix, head of the Selix Clothing Company, Eddy and Mason Streets, San Francisco, California, said to be one of the largest retail men's clothiers on the Pacific Coast, recently stated that his firm is now able to quote prices on Blue Serge Suits almost 35 per cent below what others ask. To prove his point he showed the writer a 16-oz. virgin wool blue serge which they offer at $33, whereas the same fabric is now being offered by many merchant tailors at $45 to $50. Every reader of the California Cultivator should write to Mr. Selix for a free copy of his descriptive folder, which contains cloth sample of this Special Serge.

# BIG POWER *for* BIG TRUCKS

If you want to keep your truck trouble-proof, feed it "Red Crown" and *nothing else.*

The quality of "Red Crown" is always the same, whenever and wherever you buy it. It vaporizes rapidly and uniformly in the carburetor. And it is consumed *completely* in the combustion chambers, converting *all* its heat units into power at the driving wheels. That means a better average mileage, and a sweeter-running engine.

Fill at the Red Crown sign — at Service Stations, garages, and other dealers.

# IS YOUR SHERIFF A BOOTLEGGER?

OR IS he merely winking at the violations of the prohibition law?

Investigation shows that 90 per cent of the farmers are "dry."

Liquor interferes with the successful operation of their farms.

What are you going to do about the open violation of this law you helped to pass? How are you going to fight the gang who are trying to repeal it?

THE COUNTRY GENTLEMAN is running a remarkable series of articles on prohibition, showing just how the slipshod handling of this rum question is affecting your pocketbook.

These include a stirring article by our well-known investigator, HARRY R. O'BRIEN, *Is the Farmer Wet?*—and the opinions of County Agents the country over, entitled *Repeal? No! Enforce? Yes!*

And other articles, including a thought-provoking one by JAMES R. HOWARD, President of the American Farm Bureau Federation, will follow.

*These appear in the next thirteen issues.* You can't afford to miss them.

## What Makes You the Most Money?

What crop that you can raise will make the most money for you?

What enterprise? What management? What method? Concentration on one product or two or three?

THE COUNTRY GENTLEMAN sent an investigator 3200 miles asking "dirt" farmers these questions.

The answers are published in a series of articles continuing through the next thirteen issues.

Vital information here. Information that may mean the difference to you between profit and loss, or between ordinary profit and *big* profit.

Our investigators found farmers that were making extraordinary successes because they knew what to do.

Find out what they did—in the next 13 issues.

This is but one of the many phases of the farmers' business that will be covered in the next three months.

## Strikes!—the Farmer *Always* Gets Stung

You bet the farmer always gets stung—no matter who wins.

But just *how?*

Have you figured out all the ways by which you get the short end of it? Have you counted the cost to you when the railroad men or the miners or anybody else goes on a "vacation"?

EDWARD HUNGERFORD has.

He tells in vigorous fashion just how, and suggests a remedy.

*This also comes in the next thirteen issues.*

## 13 Issues for Only 25 Cents

For only 25 cents, we will send you the next 13 issues of THE COUNTRY GENTLEMAN, containing these and many other important features.

THE COUNTRY GENTLEMAN is a practical "dirt" farmer's magazine.

It emphasizes the *business* end of farming. It shows you constantly in hundreds of different ways how you can make more money out of farming in your section of the country.

Forty pages, each week, packed with meaty, sound *help.*

## The Farm Under the Farm, or Down Where Fertility Is

Some of California's almost worthless lands have been turned into producers of great crops. They have perhaps been worthless only because air and moisture have not been admitted. When the power is put on the right type of tool and a scene like the above is thrown on the screen it becomes possible to grow crops—more, it becomes possible to grow profitable crops. The Cultivator has touched almost every angle of this matter of using the fertility which is actually in the soil. Fertilizers cost money, yet they are necessary for richest return. Likewise it is better to draw our checks on the deposits now available. They are not available excepting we use the forces of nature as aids at least, in putting them into active circulation. To do this we may use primitive methods of "main strength and awkwardness." We may use horse power, gasoline power or dynamite. But in any case break up the sub-soil and make available the riches below.

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

## EDITORIALETTES

The photograph on the cover shows real doin's down in the soil. There is not much of real action visible above but it may be taken for granted those plows are running along somewhere between 18 and 24 inches under the surface. In any case there is a breaking up of clods which makes an opening for the penetration of air and water. Deep soil culture is vastly different from that of a score of years ago when "light draft" implements were in good form. Soil that is worth cultivating is worth cultivating deeply.

## ARMISTICE DAY

Business farmers who drive in to town to sell or to buy or to bank and come up against a neat sign "Legal Holiday, etc." have at times expressed a bit of restiveness because of the ever increasing number of holidays. Is there an election? The banks close. Or, some one or some thing has a birthday and everybody closes shop. While the number of these days is increasing unduly we still believe one of the newest in observance is really worth while. It is that in commemoration of the signing of the Armistice on November 11, 1918.

Every one of the four years which has passed has increased the people's appreciation of the significance of the day.

In an address on Armistice Day the President said:

"The increasing enthusiasm with which our people join in the annual observance of Armistice Day, enforces the conclusion that it is destined to be one of the notable anniversaries in our calendar, and indeed it well deserves to be all of that, for it marks the victorious culmination of our nation's most impressive participation in the affairs of the world.

"We shall not go amiss if we seek to make our observance of this anniversary, not only this year but every year hereafter, an occasion for appraisal of our relationships to and participation in these wider concerns which involve the welfare of all mankind."

## STOP THE FLOODS

The eyes of the Southwest are on Santa Fe. The Colorado River Commission is meeting. Its chairman, Herbert Hoover, is presiding. Seven states have sent delegates. Two departments of the federal government are participating. Many delegates are there to fight for all their home state is entitled to. Some are ready to fight for more than their state is entitled to.

Colorado claims: "Colorado furnishes about 65 per cent of all the waters of the river system, and the main stream rises in Colorado. Now is the ideal time to write a treaty between interested states which will prevent future conflicts, owing to the fact that there is no serious disagreement at the present time."

California has but little title to Rio Colorado on the basis of percentage of waters supplied to that stream. But California does say "If the waters are yours then you are responsible for the millions of losses because of uncontrolled floods." The quarrel continues.

However we are assured that "the most cordial feeling prevails between delegates."

Meantime the mighty power of the river is used in destruction; only half its irrigation possibilities are developed; the warmth and light for our homes and the power to turn the wheels in hundreds of mills still lies dormant—undeveloped.

"Why?" We hope Santa Fe will answer.

## NO JAPANESE CITIZENS

Japanese cannot become naturalized citizens of the United States, This is the substance of a supreme court decision delivered November 13. It was handed down in long delayed ruling on a case brought in 1914 by a Japanese, Taka Ozawa, who applied for citizenship in Hawaii and was denied. The court stated that "in all naturalization acts from 1790 to 1906 the privilege of naturalization was confined to white persons (with the addition in 1870 of those of African nativity and descent.)"

The court reviewed at the same time a similar case brought by Japanese against the secretary of state of the state of Washington. The state of California filed briefs with the United States supreme court in both the Washington and Hawaiian cases, supporting anti-naturalization.

The interest of California is as keen as that of Hawaii and Washington in these cases because of the necessity Californians have felt for anti-alien land legislation. Arguments on four separate actions to test the constitutionality of these anti-alien land laws are on the United States supreme court calendar for November 27.

## RAIL CUT REFUSED

The Pacific Coast is not to have a lower freight rate on the railroads. Last June the interstate commerce commission was asked to grant coast shippers a lower rail rate in order to meet increasing competition of all-water shipments via Panama Canal. The commission has denied the application. During the hearing the reduction was opposed by the inter-mountain cities such as Spokane, Salt Lake City, Phoenix and Denver, whose representatives insisted that no lower rate be granted to the Pacific Coast cities than was granted to them. This long and short haul fight has been a perennial and for the time being the short haul has won, but with the Pacific Ocean handy, California "should worry."

Note the interesting fact proved during the hearing that half of all the freight originating for the coast in the Pittsburgh-Buffalo section of the eastern part of the United States is now carried all the way from the Atlantic seaboard by water through the canal at much lower rates than the all-rail rates.

## LAND SETTLEMENT

We believe one of the mistakes of the recent election was the failure to pass the land settlement bond act which was No. 4 amongst the state measures on the ballot. Those opposing the act made claims that "This is a proposition to bestow the use of the public credit of the state upon people who, lacking industry and initiative, have no private credit of their own."

Viewed from the standpoint of selfish and immediate interests this claim is true. We still believe an opportunity has been lost for increase of population and advancement of the interests of California. In a recent bulletin on land settlement by Dr. Mead, Professors Shaw, Adams and Gregg it is stated:

"California made land settlement a matter of public interest and effort when the legislature of 1917 passed the land settlement act under which two rural communities, Durham and Delhi, have been created. This action was taken by the legislature because of the need for more careful study of conditions of soil, climate, and water supply than private enterprise is inclined to make, and for the better organization of the settlers in the state. In carrying out the provisions of the act of 1917 the state land settlement board has employed distinctive methods, the chief points of which are the following:

"The soil, and the water supply, and educational, health, and market conditions are studied by experts before the land is bought. The size of farms, the kind of agriculture suited to the locality, and the cost of developing a farm are investigated in order that settlers may be given expert advice and direction.

"The payments on land are amortized and extend over 36½ years, with interest at 5 per cent.

"Settlers are helped to organize for cooperation in development, and to buy and sell as a community.

"Settlers are loaned money to complete development or to buy livestock and equipment.

"Homes for farm laborers are provided."

We believe such statement by men of vision and with highest wish for California's prosperity should have meant far more to voters than the objector's best arguments.

## COOPERATORS COOPERATE

On the 14th, 15th and 16th of next month there will be held in Washington, D. C., a convention that should and we hope will be of more benefit to cooperative farm organizations than any movement of the kind that has ever been undertaken. We refer to the call issued by the National Council of Farmers Cooperative Marketing Associations for the first national convention of farmers business organizations, a notice of which appears elsewhere in this issue.

Among the matters to be discussed at this convention will be rural credits legislation from the standpoint of cooperative marketing associations. In his suggestions for such a meeting, U. S. Senator Capper says: "I have been greatly impressed with the fact that the greatest use that has been made of government credit agencies in aid of the farmer has been through cooperative marketing organizations. Extensive as is the membership of these organizations at this time, I am convinced that the cooperative marketing movement is still in its infancy. This being the case, it seems to me that the voice of the cooperative marketing associations, as business organizations of farmers for the specific purpose of marketing their products, should be heard on this question. Since the best way to benefit the farmer in helping to finance the distribution of his products is through the cooperatives, it seems to me that those engaged in framing rural credits legislation should give the gravest attention to the desires of these organizations in this matter. Convened at Washington at an early date, such a gathering would, I am sure, be looked upon with great favor and keen interest by all members of congress and government officials that have the interest of the farmer, and therefore of the country at heart."

Rural credits legislation is a matter of great importance to the general farming industry and, as Senator Capper says, can best be worked out through cooperative marketing organizations. The lack of stability in prices of farm products is responsible for the lack of credit that the farmer should enjoy, and at the same time this lack of credit very often forces the farmer to sell or bargain to sell his crop at a time when prices are low. He thus not only hurts himself but demoralizes the market for that commodity. Cooperative marketing with some system of rural credits should be able to overcome to a great extent this instability of prices and put the farmer somewhere near on a par with other business enterprises in the matter of credit.

Other matters which will be discussed are the common problems of cooperative marketing associations and particularly the problems attending upon the handling of the various commodities. The marketing associations of the different commodities throughout the United States will have a chance to get together and work out their common problems, and thus, instead of working against each other, they may be able to so distribute their products that serious competition may be avoided.

California, with her fresh and dried fruit associations and other cooperative organizations, should be well represented at this convention, and in view of the success attained by these organizations in the marketing of fresh and dried fruits we should take a leading part in the discussion of the problems confronting cooperative marketing. California is looked upon not only in the United States but throughout the world, wherever extensive farming and fruit growing is being carried on, as the leader in this movement, so let us do what we can to assist.

# Sub-Soiling Citrus Orchards

By W. R. Wood

MUCH has been said regarding the question of deep or shallow cultivation for citrus orchards, but the fact remains that the practice of deep cultivation is gaining favor with the growers.

It has not been a great many years since it was the general belief that deep cultivation or plowing would ruin an orchard and that all the cultivation necessary was just what was required to keep down the weeds and prevent the soil from crusting over and cracking after irrigations. If we stop to investigate the condition in some of the older orchards where such methods were practiced in the years gone by, we find that they were mostly planted on the lighter sandy loams where the drainage was good and where there was no hard pan or heavy clay sub-soil to obstruct the root growth of the trees. This class of soil permitted free root development and while the fiber or feeding roots came close to the surface, there was also a much better distribution of roots deeper down than could be found in the heavier soils, thus adding to the tree's vigor and ability to withstand drouth and heat. Water being plentiful, it was not necessary to consider deep cultivation for the purpose of conserving moisture and, the drainage being good, there was no danger of using too much water; therefore shallow cultivation was all that was deemed necessary. The fact that some of these old groves, now more than 50 years of age, are still vigorous and producing good crops, would indicate that they had never been seriously damaged by such cultural methods.

As the citrus industry expanded and the necessity for securing locations more free from frost damage became apparent, the planting gradually shifted to the higher lands where the heavier clay soils prevailed and which are quite often underlaid with a still heavier sub-soil and sometimes with hardpan or bed rock. In such soils the drainage was not as good and likewise the tree roots could not penetrate it as freely, the result being that all of the feeder roots, when allowed to do so, remained in the upper 12 to 18 inches of soil. Such soils crusted over and cracked much worse than the light loam and therefore required more thorough cultivation to prevent this condition and to conserve the moisture.

It soon became apparent that the methods of irrigation and cultivation practiced on the lighter soils would not give satisfactory results on the heavier lands and growers were forced to reverse their former methods of irrigating to save cultivation and were compelled to cultivate to keep from ruining their orchards and lands by irrigation.

As is the case in most all cultural changes, we are apt to go from one extreme to the other, so with the change from shallow to deep cultivation some growers changed over night, as it were, and, after allowing their trees to form a shallow root system, began deep plowing and sub-soiling, with the result that there were not sufficient roots left on the trees to support the tops and quite naturally the trees turned yellow and refused to produce. Such growers then condemned deep cultivation, forgetting or failing to see that it was their own fault in failing to use common sense in their work.

It is a difficult matter to undertake to change from shallow to deep cultivation on an old orchard where the root system is interlaced throughout the upper 12 inches of soil, and where it is necessary to make the change, it should be done gradually so as not to give the trees too great a shock. By running a sub-soiler down the center of the rows, once each way, much good can be done in the way of open ing up a heavy soil so that it will take water better and at the same time work in such fertilizers and manures as it may be deemed necessary to use. This is about all that can be done in an old orchard, and quite often it is all that is required to bring the trees back into condition. Where the trees are younger, two or more sub-soil furrows can be run between the rows and better and quicker results will be accomplished.

Once Between With a Big Sub-soiler

The illustration on the cover shows how hardpan or intractable soil may be handled so as to make both soil and sub-soil take in both air and water and fit themselves so as to be able to yield up their plant food for growing crops. The above illustration shows the method of breaking through hardpan or plow sole of a citrus orchard so as to admit irrigation water to lower feeding root levels.

In my opinion, deep cultivation and sub-soiling should be practiced on all heavy soils from the time the trees are first set out. By doing this, it will be possible to work straw and manure or any other fertilizing material into the lower subsoil and loosen it up so that it can be more easily penetrated by the root system. The deep cultivation will force the necessary plant food to a depth where it can be taken up by the roots without their having to come to the surface in search of it. Less water will be required to maintain the proper soil moisture and there will be less danger of getting the subsoil in a sour or water-logged condition. By sub-soiling in the fall or early winter, the soil can take up much more of the winter rains and thus requires less irrigation in the spring months.

Deep cultivation means a more uniform condition of the trees which in turn means better and more uniform crops.

Trees cannot produce at their best where the feeding roots are so close to the surface that they are subject to all of the various weather changes. Where there is from six to 12 inches of well pulverized soil, above the roots, there is much less danger of the trees suffering from either drouth or extreme heat.

# Miss Warner's Turkeys

By Jean A. Koethen

IF you want to know about turkeys," said a bright young Hemet woman in answer to my inquiry, "you should certainly see Miss Kate Warner. She has raised turkeys longer than anyone else round here and can tell you all you want to know."

My informant was right. Miss Warner, who belongs to the pioneer Warner family of Hemet and San Jacinto, learned turkey culture from "Turkey Myers," who for many years herded his hens and gobblers over the hills and grain fields of Hemet Valley. He raised thousands in his day, and those who watched him lead them out in the morning and back to the fold at night, and were privileged to ask him questions, got an insight into the character and habits of this most interesting of our domestic fowl which is denied the ordinary student of poultry husbandry. To this acquired knowledge Miss Warner adds that gleaned from many years' experience, and a love for and understanding of her birds. When her toms, after posing for an unsuccessful snapshot, went trooping off with swishing wings to the alfalfa field, they looked exactly like a lot of mischievous boys, released from school by the word of a teacher whose authority they never questioned.

A Model Brood Coop

Notice the sliding door, and the doorway built well off ground. Miss Warner is giving her charges their evening meal.

Miss Warner's turkeys are confined in a shady yard quite near the house where she can always have an eye on them. Even there turkey thieves have found them, and it was necessary this year to build a pen right under her bedroom window, "where I can speak to intruders," she explained with a twinkle in her eye. The turkeys roost in the open and are let out for a part of each day on the alfalfa. The breeders are fed wheat in the morning, a gallon and a half to the 40 hens, a

(Continued on Page 551)

# Agricultural News Notes of the Pacific Coast

## Northern California

Dogs killed 60 head of sheep at Woodland.

First cranberries in San Francisco sold at $20 and $22 per barrel.

California's fruit crop for 1922 will exceed $100,000,000 in valuation.

Sisson, Shasta County wants to change its name to "Mount Shasta."

B. F. Walton a pioneer farmer of Sutter County died at the age of 87 on October 31.

The annual convention of superintendents and operators of national parks was held in Yosemite November 13-17.

Father Ricard predicts for fore part of next week "partly cloudy," "possibly rainy" with week's close "fair from Imperial to Alaska."

Representatives of the California Wool Growers' Association attended the annual meeting of the Marysville District Wool Growers November 4.

A Sonoma County White Leghorn hen has passed the 300 egg mark in the farm bureau egg laying contest at Petaluma. She is the property of H. R. Thomas.

A fight on the King Tax Bill is to be made in the courts of San Francisco. The railway attorneys insist that the state has no right to levy "heavier on railways than on farms."

Modoc County potato growers are reported accepting as low as $20 per ton. There is a large crop to dispose of in the county. Growers say that they cannot ship to Eastern markets in competition with Idaho growers.

Plans for the administration and development by the board of forestry of a new state park in Shasta County, which will include Burney Falls and a virgin forest of yellow pine, are announced by State Forester M. R. Pratt.

H. R. Thomas of Petaluma has the two highest record hens in the Sonoma County egg laying contest for the 11 months beginning November 1, 1921. Their records are 292 and 259 eggs. 20 hens are reported with records of over 226 eggs for same period.

San Francisco reports: Dressed turkey prices opened the 1922 season from 9 to 17 cents a pound cheaper wholesale than last year. The range this year is from 35 cents a pound for heavy old toms to 45 cents a pound for the fancy early spring birds, as compared to the range of from 52 to 54 cents in 1921.

The annual convention of the California Fruit Growers and Shippers will be held at Sacramento, December 12-14 to form a cooperative organization for handling matters of transportation with the interstate commerce commission. Washington, Oregon, Idaho, Utah, Montana, Colorado, Arizona and New Mexico will be asked to send representaives.

As a precaution against the introduction of cattle scab, which is reported to be prevalent in parts of Texas and New Mexico, the division of animal industry of the state department of agriculture, through Dr. J. P. Iverson, head of the division, has notified the Southern Pacific and the Atchison, Topeka and Santa Fe Railroads not to accept for delivery into California cattle from several counties in these states.

## Central California

Car shortage is still serious problem before grape growers of the valley.

The new highway from Knight's Ferry to Keystone was opened to traffic on November 12.

The Almond Growers Exchange last week shipped five cars of almonds from Oakdale, Stanislaus County.

Pacific Slope Dairy Products Show at Fresno the past week brought big attendance from all over California.

The Stanislaus County cow testing association has 4,000 cows on its books and is the largest in the state.

An experimental fig orchard will be planted near Planada, Merced County, by the California college of agriculture.

The Porterville Cooperative Poultry Association increased its business $1000 in September over the preceding month.

Some damage was done to raisins by early rains of last week of October, those on paper trays were injured most seriously.

Lindsay is talking of citrus show and industrial exposition to be held the latter part of November or first part of December.

All water in the ditches of the Lindsay-Strathmore irrigation district, excepting for domestic use, will be shut off on November 15.

The new packing house of the Elderwood Citrus Association at Lindsay was dedicated on October 14. 250 guests were entertained by the packing house management.

Eighty per cent of the farmers of Stanislaus County, who started to keep accounting books last fall, completed them, according to A. A. Jungerman, county agricultural agent.

The canned raisin, the latest pack to be marketed by the Sun-Maid Raisin Growers in 8 ounce and 12 ounce air tight, sealed tins, is meeting with favor throughout the United States.

A tour of lettuce and vegetable fields was conducted by the agricultural extension service in Monterey County last week. Some interesting demonstrations were made of double cropping.

A series of spraying demonstrations will be given in Stanislaus County, November 23 and 24 by E. O. Essig of the experiment station at Mountain View cooperating with County Agent Jungerman.

The farm center at Dos Palos has been making local canvass to determine supply of hay. It is also investigating supply in nearby farmers hands in order to provide against later shortage and high prices.

The Watsonville district had shipped up to October 21 972 carloads of apples to points within the state, 178 carloads to eastern points. Last year at same date 1322 cars had been shipped within the state, 521 east. Car shortage has held up movement this year.

As result of serious shortage of refrigerator cars the United States has approved opening of the El Pinal winery at Stockton. The winery will be operated on a cooperative basis by vineyardists of the San Joaquin Valley. It is stated that the wine will be sold largely to patent medicine manufacturers.

## Southern California

The first picking of fall peas has been made at Brawley.

Pear growing districts report blight more severe than for many years.

The apple packing season is over in the Yucaipa and Oak Glen sections.

A truckload of broom corn went from Holtville to Los Angeles last week.

Palo Verde Valley has voted its second levee district bond and work will begin at once.

The Ventura Lima Bean Growers Association met November 4 to elect a new directorate.

A boys and girls pig club contest will be held in Imperial County, December 4 to March 30.

The Redlands Horticultural and Improvement Society held its fall flower show November 9 and 10.

Palo Verde Valley will show larger planting of alfalfa, grapes, cantaloupes and lettuce than last year.

Imperial County supervisors have offered 40 acres of the county farm for experimental date farm to be conducted by federal experts.

A persimmon institute will be held at Santa Ana high school on Friday, November 4. It is under auspices of the Orange County farm bureau.

The second Los Angeles County egg laying contest started October 1, 1922, with 47 entries. 39 are White Leghorns. Heavy birds are kept separate from light birds.

The Redlands chamber of commerce is pushing organization of citrus orchardists to cooperate in frost fighting. The Pomona system of spreading frost warnings is being studied.

Swine raisers held get-together meeting and banquet at Brawley on the evening of November 9. Plans for securing better market for feeder and fat hogs were discussed.

Grade of Cahuenga Pass leading into Los Angeles from the San Fernando Valley is to be lowered to accmmodoate heavy traffic from Ventura, Santa Barbara and the valley.

The soil fertilization committee of the associated chambers of commerce of Imperial Valley is planning a series of meetings at central points over the valley to be followed by a county convention in January.

The Automobile Club of Southern California has been receiving many complaints of thieving autoists in walnut and orange orchards. It has been necessary to establish patrols in many counties to protect the crops.

Dairymen of the Riverside County farm bureau are objecting to difference in prices paid by the California Milk Producers Association for milk shipped once a day, 95 cents; twice a day, $1.00. Secretary Packard will take up the matter with the association.

Newly elected officers of the Los Angeles County farm bureau are President, H. S. Bissell, first vice president, Mark Grimes; second vice president, E. D. McSweeny; secretary, W. S. Rosecrans; treasurer, Ralph McNees; state director, Robert H. Neely; directors at large, Dr. J. G. Biller, Dr. George P. Clements, D. S. Fox, and J. B. Vaile.

## The Coast and General

Medford, Oregon, held an apple show November 9.

The annual convention of the Farmers Union of Washington and northern Idaho will be held at Spokane, December 12.

A quarantine has been placed on shipments of cattle and dairy products from several counties of New Mexico and Texas into California because of scabies.

The Pasco-Kennewick bridge across the Columbia was dedicated, Saturday, October 21. It was built by popular subscription without either state or federal aid.

The average wages of male farm labor for the entire United States, October 1, was $28.97 a month with board, according to 1,300 county crop reporters. The average rate for the year 1921 was $30.14.

Along with the other modern ideas acquired by Japan during the last 50 years, that country has taken a firm hold on the use of canned foods. The Japanese have gradually acquired a taste for canned fruits, vegetables, jams, etc.

A meeting has been arranged at Washington, December 14-16, of the National Council of Farmers Cooperatives. Representatives are expected to be present of every cooperative farmers marketing association in the United States.

The Kleine Gemeinde congregation of Mennonites, recently migrated from Canada to Mexico, has taken an option on 150,000 acres of land in Chihuahua. Another migration is expected soon of 3,000 Mennonite families in Russia who have been granted permission by the Soviet government to leave that country.

The Oregon Purebred Livestock Association has asked the state emergency board for $10,000 to be used by the state livestock sanitary board the remainder of the year in testing cattle for tuberculosis. The association also asked an appropriation of $6000 for a boys and girls club exhibit building on the fair grounds.

A total pack of 13,042,000 cases of peas was put up by American canners during the season just closed, practically double the pre-war average. With the failure of the French pea crops there is every indication that foreign markets will absorb a big percentage of the large American pack, especially of the fancy grades.

The use of foreign canned and dried milk in England has increased to the extent that it is threatening the dairy industry. The daily consumption of fresh milk has dropped to less than one-quarter of a pint per person. The National Milk Publicity Council is striving in every way possible to bring the people to a better realization of the situation.

Soviet authorities are discouraging all talk of exporting any grains except "demonstrative" quantities which would show what Russia would be able to do in the future, preferring to hold any surplus grains this year as the foundation of a crop reserve both in the hands of the small holders and the large government organizations. This will also be used in the development of internal trade.

# Fertilizer Men at Sacramento

THERE has been a fairly good working understanding between fertilizer people as to the existing fertilizer law. However, there has been a bit of friction as to the proper handling of lower grade materials such as gypsum, lime, and occasionally goat and stable manure. Dealers in mineral fertilizers recently met at Sacramento and conferred with the state department of agriculture represented by Dr. Geo. P. Gray, chief of the division of chemistry. The producers requested Dr. Gray to appoint a committee of five to represent these interests for the purpose of discussing measures which would control the conditions of sale. Those appointed were: The United States Gypsum Company, represented by R. E. Henderson; The San Francisco Sulphur Company, represented by F. W. Wieder; The Bernal Marl and Fertilizer Company, represented by L. W. Stetson; The Kaweah Lime Company, represented by A. C. Root; The Agricultural Lime and Compost Company, represented by F. P. Van Hook.

The industries represented feel that as these materials have to do with the agricultural prosperity of California adequate protection should be given both to the producer and the consumer and that the conditions of the sale of these materials should be subject to control similar to that now exercised over the sale of commercial fertilizers.

The correct legal classification of these materials was considered, as well as proper tagging and sampling and the payment of a license fee and tonnage tax.

The legal classification of the materials was the subject of much debate, some members of the committee feeling that, as these materials enter into the growth of the plant to as great an extent as nitrogen, phosphorus and potash, the five elements, calcium, nitrogen, sulphur, phosphorus and potassium, should be recognized as all being of major importance and a definite guarantee be made of the percentages of these necessary elements of plant food.

Other members of the committee held the view that as the first agricultural chemists of a century ago decided that nitrogen, phosphorus and potassium were of major importance around N. P. K. that the views of the older agricultural chemists should be and trade custom resolved itself respected and lime and sulphur should receive a different classification from commercial fertilizers.

Touching upon this subject of fertilizers and the elements which should be considered a requirement of plant growth R. E. Henderson, one of the plant committee, says:

**By R. E. Henderson**

A fertilizer is material designed to be applied to the land for manurial purposes. That is the only official definition I have been able to get on the much used word fertilizer.

In the past it was supposed that only three of the elements necessary to plant life would become deficient in the soil and have to be regularly replaced. These three elements, nitrogen, phosphorus and potassium (herein after called N. P. K.) assumed the position of being regarded as the most important of all the so-called plant foods. This attitude was bolstered by the introduction of the fertilizer law, which, after producing the above definition, goes blithely ahead and concerns itself with only the N. P. K. contents of fertilizers. No legal protection has in the past been given to either the producers or the consumers of materials which are used as fertilizers but which contain no N. P. or K.

For the sake of simplicity I will refer to those fertilizers containing N. P. K. in a readily available form, as commercial fertilizers, and those fertilizer materials which contain no guaranteed percentage of N. P. K. in an available form but which contain other necessary plant foods I will designate as natural mineral fertilizers.

The manufacturers of and dealers in commercial fertilizers, in a business like manner, and no doubt sincerely, have carefully fostered the impression that the N. P. K. content was the be all and end all of fertilizing practices. The production and sale of natural mineral fertilizers has not been in the past accompanied by any such business like and educational propaganda, and the result is that misinformation and prejudice exists.

According to tonnage figures supplied by the state department of agriculture in the fiscal year 1921-22 there were approximately 80,000 tons of commercial fertilizers sold in California. The estimated tonnage of natural mineral fertilizers sold in California during the same period is well over 100,000 tons.

These figures are not an attempt to prove any greater importance of natural mineral fertilizers over commercial fertilizers because no one plant food or mixed fertilizer is any more important than another. The importance of any plant food material or fertilizer is dependent entirely on the soil and plant requirements.

If then, the equality of importance be admitted, it is only right that legislation be applied equally in order to protect equally the producers and the consumers of natural mineral fertilizers with producers and consumers of commercial fertilizers. It is well know that honest purveyors of commercial fertilizers recommend the application of one or other of the natural mineral fertilizers, and the reverse also holds true.

A fertilizer which contains one or more of the three elements N. P. K. is applied to effect an increase in the crop. Lime or sulphur or both are also applied to effect a crop increase. The success of the application of any of these materials is dependent on soil requirements.

The following is a list of the more important sources of calcium, nitrogen, sulphur, phosphorus and potash having the chemical symbols Ca. N, S, P, K, respectively; bat guano, cottonseeed meal, blood, nitrate of soda, nitrate of calcium, nitrate of ammonia, sulphate of ammonia, sulphate of calcium (gypsum), raw rock phosphate, acid treated rock phosphate (superphosphate), bone, fish tankage, meat tankage, garbage tankage, hydrated lime, calcium carbonate as (1) limestone (2) marl, potash as (1) carnellite (2) kainit, sulphur, and animal wastes.

With the exception of the tankages and animal wastes these materials may be applied either separately or as mixed by the manufacturer. The price of these materials at present range from $5 to $100 per ton. With such a big range in prices of such a variety of materials, each having its own individual properties and appeals to the consumer, the need of a centralized state control is very important.

The fertilizer law of California was made effective in July, 1903. This law, however, affected only such materials which were sold to the consumer at a cost exceeding $8 per ton. Since the introduction of the fertili er law there has been a pronounced increase in knowledge and also a considerable increase in the price of commodities.

We cannot have use without abuse, but we can at least reduce the possibilities of abuse to a minimum. As all these materials are—by the state's own definition—fertilizers, their manufacture and sale can only be controlled through the fertilizer law.

The fundamental of the whole matter is that unless their production and sale is controlled by law unscrupulous producers and purveyors of inferior materials may cheat the consumer and seriously damage a basic industry.

The equality of importance of the fertilizer materials should be admitted and the state fertilizer law be so amended that the production and sale of these materials may be controlled by the state department of agriculture.

# California Dates in 1922

## By Ernest Braunton

THE Valley Packing Association, an organization of about a score of date growers in the Coachella Valley, has this year secured a packing house at El Monte, Los Angeles County, where the entire crop is packed and shipped. During the first 60 days, or from August 15 to October 15, between 20 and 25 tons had been shipped. The affairs of the association are managed by R. H. Postlethwaite, one of the largest growers.

The normal season begins August 1 and ends December 1. The 1922 season was about two weeks late. During the four months run there are many dates of many names handled, as is the case with nearly all fruits, but the main crop is confined to about six varieties, of which two are known as soft, Khadhrawi and Nomad; three are semi-soft or firm, such as Deglet Nur, Zahidi and Damon; and the bread dates, of which Thuri is the leading variety.

### The Handling

When received the dates are first placed in a vacuum fumigator for one and a half hours under 29 inch vacuum, and treated with carbon bisulphide which kills all uests or their eggs. Then they pass on a wire screen conveyor through the washer consisting of perforated pipes above and below so the fruits are between opposing jets as they pass along. From washer they go to a hot air dryer which registers 175 degrees Fahrenheit. The grading is done by hand as the dates pass on a metal link conveyor. From the graders the firm dates go into the process room to remain under heat until the proper degree of ripeness is reached.

The soft dates go into a dehydrator in 16 tray "stacks," containing 300 pounds of dates and remain from two to eight hours, or until the right moisture content is reached for immediate packing. The last hour they are kept under a sterilizing temperature which kills all enzymic action so dates cannot sour or spoil. After packing in glass jars containing six or ten ounces they go to the capping machine and then into the sterilizer, 250 jars at a time. They are then labeled and packed in cases for shipment, 24 to a case.

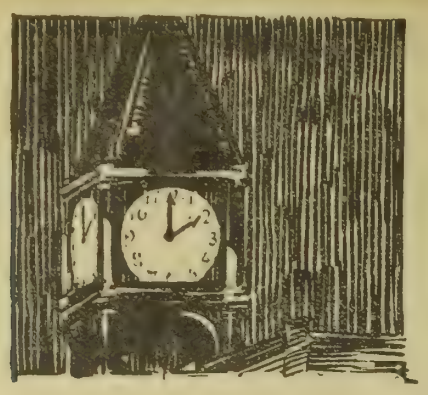
Fancy dates are packed both in cartons and glass jars, the quality being the same. This is done to satisfy the trade which calls for both packs. While the carton pack will keep for months it will gradually lose its fresh appearance although sound and of good flavor. The glass jar pack will remain in initial state indefinitely if unopened.

The soft standard grades go into cardboard boxes, the fruit covered with cellaphane, a very thin, tough and flexible material as transparent as plate glass. This is a complete protection and yet allows fruit to be plainly seen when box cover is removed. These are in one and three pound pack. The firm standards are put in three pound cartons for dealers. They are loose in carton so that dealer may pour one or two pounds in a paper sack without handling dates or, if three pounds are used, the consumer takes the carton.

This association puts out all these under the "Dos Palmos" (two palms) brand in a very attractive package. The third grade, really the best for quick local consumption, consists of soft or mashed dates which, through ripeness alone, have lost their form and have the skin broken. These are put in fruit baskets in two sizes and sold without the Dos Palmos brand as, being exposed to the air after leaving packing house, they cannot be guaranteed to consumer as are all the sealed brands. They are, however, guaranteed to be in every way as good as the best when they leave the packing house.

### The Market

The market is nation wide, the dates reaching every large city in the United States. Just recently Mr. Scott, the traveling representative, returned from a trip to every large city from California to the Atlantic Coast, and dates are shipped to every one. The demand for California dates so far exceeds the supply that it is doubtful if prices will be lower for many years to come, if at all. Aside from quality, appearance will alone sell them in any market. The extremely sanitary and cleanly methods of treatment in the packing house insure a dainty natural fruit confection that, within the experience and taste of the writer, has no equal.



# *Do you hear the clock strike the night hours?*

HOW often you have heard people say, "I can't drink coffee; it keeps me awake nights!" *They've* learned from experience; have you?

If you are a coffee drinker and fail to get sound restful sleep, it means that your nerves are over-stimulated and that health needs protection from coffee's drug, caffeine.

There's no sacrifice in making health safe, as so many thousands have found who have turned from coffee to Postum. It has a delightful coffee-like flavor, and is free from any element that can harm you. As many cups as you like, and no regrets.

Your grocer has Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes.

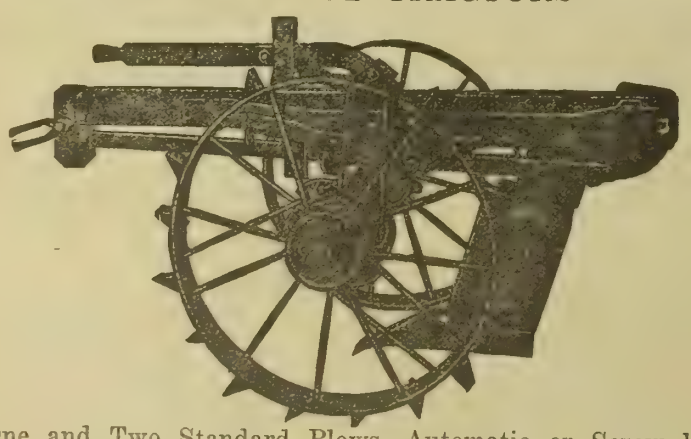
**Postum** FOR HEALTH

*"There's a Reason"*

Made by Postum Cereal Co., Inc.
Battle Creek, Mich.

# TOWNER'S SUBSOIL PLOWS

FOR ALL TYPE TRACTORS



One and Two Standard Plows, Automatic or Screw lift. Three and Five Standard, Screw lift only.

**Our patent Oscillatory Standard installed on all plows is an added feature not found on any other tool of this type.**

Lister attachments, special or regular. Built to fit the plows. Automatic lift Cultivators and Furrowers for light or heavy duty. Send for Catalog of Towner's Implements.

TOWNER'S

SANTA ANA CALIFORNIA

Your appreciation of the California Cultivator can be shown best by writing to and buying from Cultivator advertisers.

# The Delicious Apple

A unique dedication service was held in an Iowa orchard, one of the interesting features of which is shown in illustration here given. It was the dedication of a memorial to the man who discovered a variety of apple. The discoverer was Jesse Hiatt who first saw the apple in 1872 and it was called by him "The Hawkeye." The tree was given ordinary care and attention for more than a score of years. During this time it was exhibited at certain fairs and in this way came to the attention of C. M. Stark. After Mr. Stark had observed this excellent fruit a few years he purchased it and all rights to the tree and in honor of its high quality changed its name to "Delicious." It has now been propagated and distributed in every state in the Union and has proved itself wonderfully adapted to every section where the apple does well at all.

Those standing just behind the monument in the above photograph are, reading from left to right: Paul Stark, vice president of the American Pomological Society (son of C. M. Stark, who named the Delicious apple), Prof. Lantz, of the Ames Agricultural College, representative from Canada; Prof. Herrick, secretary of the Iowa Horticultural Society; Lawrence Stark, of Stark Brothers Nurseries. To the right of the monument, Prof. N. E. Hansen of the South Dakota experiment station, famed as a breeder of hardy varieties; Prof. C. P. Close, United States pomologist, Washington, D. C.; Prof. McCoun, chief of horticulture for the Dominion of Canada; Prof. C. I. Lewis, former director of the Oregon experiment station and now managing editor of the American Fruit Grower; Prof. T. J. Maney of the Ames Agricultural College.

Regarding this apple Prof. C. I. Lewis said at the time of the dedication: "The Delicious apple represents the crowning point of achievement in the origination of American varieties. No variety has been originated which is superior to the Delicious in quality; few can equal it in production. On the Pacific coast I am very familiar with orcharding, and it is not uncommon to find this variety yielding as high as 750 packed boxes per acre, whereas some of the older varieties often do not yield more than 200 boxes per acre. The high yielding varieties like Delicious, Jonathan, Winesap, Stayman and the Winter Pearmain, which tend to produce annually big crops, are the varieties which are making fruit growing profitable in the West. No varieties of apple of American origin ever had quicker distribution than the Delicious and none was ever accepted more readily by the American public. It is one of the best known varieties which we have, and rightly so, for its large size, its beautiful color, its delicious aroma and quality. In the origination of the Delicious a high standard has been set for us in the development of future varieties. I want to say that in the City of Chicago, where I happen to live, I believe I can truthfully say that the Delicious apple is known by more people because of its size and its delicious flavor than any other apple. I have in my hand a Delicious apple picked last October, (11 months ago.) It is still a very beautiful apple and if you should have the privilege of smelling it, you would want to eat it. The Delicious apple is offered to the people of the United States 112 months of the year."

# Golden Return for Golden Fruit

A YEAR ago the citrus orchards of California made promise of the state's greatest output of oranges, grapefruit and lemons. New orchards had come into bearing and older trees took on a wonderful load of fruit which Nature was painting a beautiful golden color. Then a "Norther" swept over the hills and for days fruit was pounded and leaves were stripped from the branches.

A few weeks of fair weather permitted partial recovery when Jack Frost made his entry. January 19 and 20 of 1922 are dates which citrus growers would like erased from the calendar. It will take some time to erase them, however. But recovery is being made much faster than anticipated.

Total shipments of citrus fruit from California for the 12 months ending November 1 were 40,099 carloads. The preceding year's shipments had aggregated something more than 60,000 carloads. But good salesmanship was brought to bear and a poor market made the best of. At delivered price a valuation of nearly $100,000,000 can be claimed for oranges, grapefruit and lemons of California.

Not half bad for an off year!

Of course out of that hundred million the rails took better than a fourth for freight and refrigeration. The box maker, the packer, the picker and others took their tithe, so the grower of California received far from a hundred millions, but he received a big bunch of money in an "exceptional" year.

That bunch of money is eloquent tribute to cooperation. Without cooperation frozen fruit would have been promiscuously dumped on markets, which, with faulty distribution, would have proved the finish of many an orange grower.

The story of that cooperation for the past year is told in the annual report of E. G. Dezell, manager, since the death of G. Harold Powell, of the California Fruit Growers Exchange. From that report we quote:

* * *

By E. G. Dezell

A report of the operations of the California Fruit Growers Exchange for the season 1921-22 covers another year when the California citrus industry was faced with extremely adverse conditions, but through cooperative, intelligent handling of the many problems the final results on the crop as a whole will approach those of most normal years.

During the nights of January 19, 20 and 21, most of the California citrus fruit districts were visited by severely cold weather, and the crop and trees were damaged to an extent comparable with that resulting from the freeze in 1913, which was the most serious in the history of the industry. However, with the experiences of that disastrous season to guide them and with the federal and state laws brought about as a result of that experience, the shippers were practically of one mind in the desire to avoid the shipping of fruit that would be unsatisfactory to the consumers and thereby harm the reputation of California oranges and lemons in the markets. Shippers and growers held meetings in all districts and agreed to stop picking until the extent of the damage would become clearly apparent, and later, with few exceptions, cooperated with the authorities in the enforcement of regulations designed to allow only merchantable fruit to be shipped. The confidence of the trade and the consumer was thus retained, the public was protected and the markets maintained. The oranges shipped through the exchange, which equaled in volume only 53 per cent of the preceding season's shipments, brought approximately 90 per cent of the receipts of that season for the fruit on the tree. The returns were not evenly distributed, however, some growers being able to ship but little fruit following the freeze, while others, whose groves were situated in districts where the temperatures were not severe or who successfully protected their crops by orchard heating, received large returns because of the greatly reduced supplies.

The result clearly shows the wisdom of the policy followed when compared with that of 1913, when quantities of badly frozen fruit were rushed out immediately following the freeze which did not give satisfaction to the trade or consumers, demoralized the markets on all California oranges and created much unfavorable publicity concerning the California orange industry.

### Shipments and Returns

The total shipments of oranges and grapefruit from California, as reported by the railroads for the year ended October 31, 1922, were 29,573 carloads, and of lemons 9,926 carloads, or a total of 39,499 carloads. The members of the exchange shipped during the same period 18,581 cars of oranges and grapefruit, and 8,557 cars of lemons, making an aggregate of 27,138 cars, or 68.7 per cent of the citrus fruit shipments from the state. The exchange handled 72.5 per cent of the crop the previous year; its membership is steadily increasing and the smaller percentage this season is due to the fact that the fruit damage was most severe in the districts where it is most strongly represented.

Exchange shipments for the past season, expressed in terms of boxes, were 7,953,041¾ boxes of oranges, 169,358 boxes of grapefruit and 3,495, 117¾ boxes of lemons.

Estimating the value of the cars yet unsold, the returns for exchange shipments, f. o. b. cars California, for the year ended October 31, 1922, were $48,647,800.25, the delivered value in the markets being $65,367,127.65. For the season's citrus crop, based on exchange results, California received $71,366,464.50, the delivered value being $95,993,485.58, which includes $24,627,021.58 for freight and refrigeration.

During the era of readjustment in business and with unfavorable conditions in most lines of fruit and produce, failures have increased and credit risks have been more hazardous. Exchange losses through financial failure of customers have been greater than in other recent years but still practically negligible considering the volume of sales. They amount to $4,997.65, or 1/100 of 1 per cent of the f. o. b. value of the fruit. The returns to California through the exchange during the last 19 years have amounted to approximately $491,000,000. The losses from failure to collect for sales made during the period have aggregated approximately $17,343, or 35/10,000 of 1 per cent of the f. o. b. returns.

(Reports as to returns on varieties, transportation, etc, will appear in later Cultivator).

## NOXIOUS WEEDS SPREAD BY NURSERY STOCK

Following a current news item, pointing to the unwelcome distribution of noxious weed seeds in nursery stock bundles, County Horticultural Commissioner V. G. Stevens of Contra Costa furnished indisputable evidence of this menace. He says, in part: "The vacant lot used by a northern nursery company here at Concord, and in which nursery stock bundles were opened and inspected, is this year heavily seeded to yellow star thistle." There is no other infestation of this weed near Concord, and the thistles are growing in the exact spots where the bundles were opened."

The danger of introducing weeds into clean or non-infested regions through such a medium is clearly apparent, and if it were possible to open such bundles of nursery stock on a "tin lined table of ample dimensions, having a raised rim," any detritus such as weed seeds or earth could be swept into a paper and burned.

## PROTECTIVE QUARANTINE AIDS FRUIT GROWERS

The article printed below, from the state department of agriculture, is quite interesting from the fact that it shows what pest control has done for the horticultural interests of California. We believe that in no state has pest control been so efficient as in this state. Possibly in no other state has the necessity for guarding the horticultural interests been so important. Our immense orchard and vineyard wealth make it essential that every safeguard be placed around it to prevent the introduction of some new pest that might seriously injure if not entirely wipe out some one or more of our fruit industries.

In a general way horticultural plantings in the United States have materially decreased in the last two years. There were in 1920, 66 million fewer apple trees than in 1910. The decrease in the United States in that time was 38 per cent, but the increase in California was 18 per cent. In peaches throughout the United States the decrease was 36 per cent and in California, while we also had a decrease, it was only 15 per cent. In pears the United States decreased 14 per cent, whereas in California, an increase of 147 per cent was noted. It is apparent that it is partly a matter of quarantining and inspection that permits California to go ahead, and partly our efficient marketing systems. Perhaps it is partly our climatic adaptation, but it is in considerable part a matter of quarantine. The thing that drove the peaches and the apples out of the backyard gardens and farm orchards, was certainly scale insects and other pests and diseases, although perhaps, marketing facilities and other things played a part. Now we are not particularly interested in this decrease, as such, except that we are anxious to know what the figures are going to be in 1930. What is our tendency? Is there going to be a diversion upward in California and downward in the United States, or are we going to have plant pests come in that will turn our fruit growing industry upside down? California is 3,000 miles from the market. We have had to develop marketing agencies from dire necessity, and it has happened many times that we have barely marketed at a profit, and sometimes not a profit. We do not need a major pest to put us out of business; in a good many lines a minor pest, the control of which adds no considerable overhead, would have almost the same effect. So we are interested in quarantine because we are interested in the continual progress of this up-curve of horticultural and agricultural products.

# Growing Gladiolus

By Ernest Braunton

THE commercial growing of gladiolus is attaining considerable proportions in California. From Monterey to Santa Cruz seems to be the bulb growing section of the state, though "glads" are produced in nearly all parts of the state.

Nevertheless, the lands that best grow bulbs in general are also the best for gladiolus. Coastal sections having damp sandy soils seem to grow the best bulbs and also stimulate the greatest multiplication. Briggs of Monterey, Diener of Kentfield, Howard and Smith of Los Angeles and a half dozen commercial growers at Santa Cruz, all grow in low, damp, sandy soil. Personal experience of the writer has proved that the best of flowers may be grown on very heavy soil, but large, fine, clean bulbs with a heavy increase are not possible on dry uplands with heavy soil.

Regarding the varieties to grow one must determine what the market demands. A few varieties have been considered "standards" for several years, but varieties have their run and pass out. A few years ago America was in greater demand than any other; today it is very little grown. One must also determine if he is to grow bulbs or flowers or both. If one has facilities for speedy delivery to large markets, flowers will prove the better financial return. Remoteness from market or lack of transportation need prove no deterrent to bulb growing. Every individual must decide for himself what he will grow.

### Gladiolus Culture

Having chosen a sandy or medium loam one wishes to know what to feed "glads" that is lacking with the soil. It is well established that fresh animal manures must not be used the same year bulbs are grown; apply the previous year. Nearly all bulbs or underground crops require similar food so that a potato fertilizer is excellent for gladiolus and other bulbs. This means less nitrogen than is used for general or top crops, and plenty of potash and phosphoric acid. Some will claim that California soils are rich in potash, but none have enough for potatoes or bulbs.

In medium soil plant bulbs four or five inches deep; in sandy or light soil they are better seven or eight inches deep. Gladiolus love moisture and cool soil, and deep planting will provide these conditions. Further, the stalks stand up better with deep planting. When ripe the bulbs are dug, usually when most of the tops are getting yellow. Harvesting practice varies, but corms dug with tops and old corms left on are always safest. Allow bulbs to lie on top of soil for a day, then store for a time, several weeks if convenient, then cut off old tops close to bulb, remove last year's corm, if present, and stock is ready for sale or storage. Keep in a dry cool place; temperature should not range above 50 Fahrenheit if possible to keep so low.

### Diseases

For several years diseases of gladiolus bulbs have become more prevalent, and many stocks of bulbs from both Europe and America have to be sorted before planting. Diseased bulbs must be destroyed. The chief troubles are: dry rot, soft rot, hard rot, and scab. Some stocks have all of these troubles and but few have none. All are agreed that bulbs should not be planted in soil where diseased bulbs have previously been grown. Cold wet soil favors diseases during early part of season. Fresh manure is no doubt a contributing factor. Do not plant infected stock, no matter how little it shows. Drainage should be of the best. Nitrogenous fertilizers make soft bulbs and these are most susceptible to disease. If tops die from disease, dig out bulb at once or disease may communicate to others. No cures for the bulb rots are known.

# Inter-Cooperative Conference

National recognition of California's leadership in farmer's cooperative marketing development is evidenced by the appointment of three prominent Californians as members of the Inter-Cooperative Conference committee which will have charge of the planning of the first national convention of cooperative marketing associations scheduled to be held in Washington, D. C., about the middle of December.

The three Californians appointed on the committee are H. G. Coykendall, general manager of the California Prune and Apricot Growers Association, San Jose; Chas. C. Teague, president of the California Fruit Growers Exchange, Los Angeles; and Aaron Sapiro of San Francisco, attorney for numerous cooperative marketing organizations throughout the country.

The idea for a national conference of cooperative marketing associations was suggested by Senator Arthur Capper of Kansas, leader of the farm bloc in congress, that has been looking out for the agricultural legislative interests.

Among the cooperative matters which will be taken up at the convention will be rural credits legislation, the exchange of ideas on cooperative organization and marketing among the various farmers' cooperative associations of the country, and a comparison of the organization methods of the various associations.

Invitations to send a representative to the convention will be extended to every bonafide cooperative marketing association in the United States. Organizations marketing more than a billion dollars worth of farm products each year will be represented at the convention.

Regarding the conference and its opportunities for service to American producers, Senator Arthur Capper has written:

"As you know, some of the members of the farm bloc in congress are engaged in the consideration of important legislation on the subject of agricultural credits. The real importance of this can be appreciated when it is remembered that most financial methods and measures for government aid of the farmer, at present in operation, are of a temporary character.

"The next agricultural credits bill passed by congress should be, and doubtless will be, of a permanent character, and should be of such a nature as to close the books on this subject for many years to come. I have been greatly impressed with the fact that the greatest use that has been made of government credit agencies in aid of the farmer has been made through cooperative marketing organizations, and that these credits, so made, have been entirely satisfactory, both to the farmers through their organizations, and to the government.

"Extensive as is the membership in these organizations at this time, I am convinced that the cooperative marketing movement is still in its infancy, and it is sweeping the nation so rapidly that the best possible way to facilitate and handle rural credits for the purpose of orderly marketing of crops will very evidently be through the cooperatives.

"This being the case, it seems to me that the voice of the cooperative marketing associations, as business organizations of farmers for the specific purpose of marketing their products, should be heard on this question. Since the best way to benefit the farmer in helping to finance the distribution of his products is through the cooperatives, it seems to me that those engaged in framing rural credits legis-

A Practical Reminder for Everyday Farmers

You know your farm like a book. Whether it covers 80 acres or 320 acres, you are perfectly familiar with every corner of every field. You know the lay and contents of the buildings that make up your homestead. With your eyes shut you can tally the livestock and all the items of farm equipment. To be well posted on these things is a matter of pride with you and a matter of careful management besides.

This policy could well be carried a step further. Profitable, economical farming is so largely a matter of modern, improved machines that every good farmer should keep posted also on the equipment on the market so that when occasion arises he may invest to the very best advantage by the purchase of new machines.

We are therefore printing here for your information the list of standard, reliable, most popular farm equipment—

lation should give the gravest attention to the desires of these organizations in this matter.

"Furthermore, it seems to me that it might be a good plan for the leaders of the cooperative marketing movement to get together in a national conference, consider the matter of rural credits legislation, and work out collectively, for the information of congress, the consensus of opinion in this matter.

"Convened at Washington at an early date, such a gathering would, I am sure, be looked upon with great favor and keen interest by all members of congress and government officials who have the interest of the farmer, and therefore of the country, at heart."

## FROST AND FIG TREES

(Continued from Last Week)

### Cultural Methods

As previously stated various cultural methods have some influence upon the maturity and the resulting hardiness of young fig trees. Late summer pruning of young trees which continue their growth into the fall is inclined to stop the terminal growth and hasten dormancy. Young Calimyrna trees at Reedley were cut back on August 1 but the lateral buds were thus stimulated and new succulent growth appeared. Young trees at Merced pruned as late as the middle of September were found to be pushing out new laterials on October 7. Slower growing trees on a neighboring place, summer pruned July 7, had made no further growth by September 23. Late pruning to induce hardiness is necessary only on vigorous trees which are inclined to continue succulent growth. It should be done late enough in the season, probably after October 1, so that lateral succulent growth will not develop.

Several cases are on record in California where individual fig trees, receiving copious supplies of water from leaky ditches or pumps throughout the summer and fall have escaped frost injury while neighboring trees given the usual amount of irrigation water have been frozen to the ground. However, there is no doubt that serious injury is frequently brought about by the injudicious use of irrigation water late enough in the season to prolong growth. The withholding of irrigation water from young fig trees after a certain date, in general about the middle of July, is advisable. Even on unirrigated land fig trees are inclined to become dormant during the hottest summer weather and flush into growth with the cooler weather of August and September.

### Treatment of Frozen Trees

Badly frozen trees ordinarily send out a vigorous growth of suckers from below the surface of the ground, at or near the surface, or from the trunk and main branches. The selection and treatment of the permanent suckers are very important matters to consider. Many cases can be cited where the suckers have been thinned out to one of the strongest and this one trained to form the permanent tree. Experience, however, has shown that in a great many cases where one sucker only is left, something happens to that one to make it unsatisfactory. Most growers prefer to select two, three or even four suckers, well spaced, and build a low headed, permanent tree with that number of trunks. In case a strong sucker is found on the main trunk above the ground the permanent tree can be readily built from this one sucker, treating it very much as a newly planted nursery tree. On account of the growing industry in fresh figs and the desirability of having fairly low, compact trees, the starting of fig trees with more than one trunk seems justified in comparison with frozen walnut trees which are generally reformed from one strong sucker.

The important thing to learn in selecting the suckers for permanent trees is the kind of union they make with the main root or trunk. Suckers on the main trunk above or near the surface of the ground are to be preferred as the union is strong and firm. Suckers coming from below the surface are frequently poorly united with the root or trunk; many such suckers which grow very vigorously become over an inch in diameter a short distance above the ground but are less than half this diameter at the point of union. Sooner or later the suckers having a weak union fall over of their own weight or are blown down by strong winds. It is better to get rid of the weak ones while small than to leave them to blow over a few years later when bearing or just coming into bearing.

### Pruning

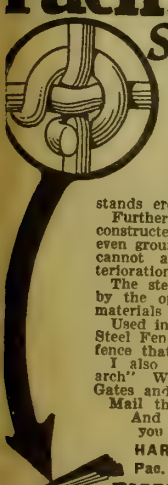
The pruning of fig trees injured by early fall frosts can be delayed until late winter when the extent of the damage is apparent. It is practically impossible to determine how far down the frost injury extends until several weeks following the time of injury. Buds which remain on the branch and look plump are frequently found to be brown and dried out underneath the bark. There is no evidence to show that the early pruning of frozen trees will prevent further damage. Extensive experience in pruning young fig trees, furthermore, has shown that early pruning in December or January does not make the tree more susceptible to injury from winter frost or from drying out of the tips. Both the exudation of milky sap from the cut and the natural layer of woody tissue at the joint prevent the drying out of pruned branches.

The problem of the treatment of young trees injured by spring frosts after the growth has started is a puzzling one. Various degrees of injury are usually to be found and the problem arises from the difficulty of determining the extent of the injury. Experience during the past two seasons seems to show the wisdom of delaying action in regard to injured trees for ten days or two weeks when a better idea can be gained of the seriousness of the situation. By that time the injured trees may be classed roughly into one of three groups: First, those which apparently are very lightly frosted with buds showing signs of growth. Such trees need no treatment in the way of pruning. Second, those which show plainly that the terminal buds and tender tips are killed. These should be cut back more or less heavily to strong buds or laterals which can be expected to continue early growth. Third, those trees which give evidence by dead buds and brown inner bark that the whole tree

Build a Better Fence and Save Money

Build an all-steel fence around your ranch and save money. My prices on highest-grade steel fencing are so low that you cannot afford to consider substitutes. I buy tons and tons of fencing which is shipped direct to my warehouses by water at a tremendous saving in freight. I share this big saving on freight with you by reducing prices.

"Pacific" Fence
Stiff-Stay Type



Here is a fence that is ideally designed to give unusually satisfactory service on Pacific Coast ranches. Note the illustration of the "Pacific" knot. It securely binds the stiff, picket-like stay wires to the well-crimped line wires, producing a neat looking fence that goes up easily and stands erect and trim under strain.

Furthermore, the "Pacific" knot is so constructed as to be entirely flexible for uneven ground and it is open so that moisture cannot accumulate and cause rapid deterioration.

The steel in "Pacific" fence is produced by the open hearth process. Only purest materials are used for galvanizing.

Used in combination with my "Red Top" Steel Fence Posts it makes a strong, sturdy fence that will last for many years.

I also carry a complete line of "Monarch" Wrap-stay Fence, "Square Deal" Gates and Barbed and Plain wire.

Mail the coupon for my FREE catalog. And remember my low prices will save you money when you build a fence.

Three Ways
In Which Best Paint Saves You Money

WHEN you figure the comparative cost of painting, figure it on a five to ten year basis. Don't be influenced by first cost alone.

In the first place it's the cost of the "paint on the property" and not merely the cost per gallon that counts.

The best paint is really the most economical in this regard. It spreads easily, saving labor cost. It covers more area per gallon than "cheap" paint.

In the second place, you want the paint to last. The best paint serves five or more years longer than "cheap" paint. Therefore the best paint costs less on a "per year" basis, too.

The reason for the economy of the best house paint lies in the fact that it is scientific in formula and preparation.

We've made the best house paints for 73 years. The materials are the finest. For example, the white lead we use—PIONEER WHITE LEAD—is super-purified and ground so fine that it will pass through a silk screen with 30,000 meshes to the square inch.

So with the other materials—pure linseed oil, pure zinc and pure colors—all finest quality, combined in Fuller's House Paints in scientifically exact proportions with long-time skill.

By using such paint whenever your property or equipment needs it, you prevent decay and thus find real economy.

**House Paint:** Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured—32 colors.

**Barn and Roof Paint:** A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality—6 colors.

**Floor Paint:** Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

**Implement Paints:** Fuller's Pacific Wagon Paint, adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish—7 colors.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

Advice on Painting FREE

has been seriously affected. Such trees should be cut back to the main trunk or even to the ground in order to prevent sour sap and to stimulate early development of suckers.

The pruning of bearing trees seriously injured by either fall or spring frosts should be delayed until the extent of the injury can be determined. The tops of many Adriatic trees which seem to be badly injured early in the spring of 1922 pushed into growth later and produced considerable fruit. Later in the season the dead branches showed up plainly in strong contrast to the green foliage on uninjured branches. The presence of the dead wood gives an unsightly and ragged appearance to the tops but has no injurious effect on the rest of the tree except to allow the direct sunlight to shine on exposed bark of main limbs. Badly injured trees should be sprayed thoroughly with whitewash to prevent sunburning of the trunk and main branches. The pruning out of the dead wood can be readily accomplished in late fall after the crop is off or during the following winter.

## PEACH BLIGHT

Now that the first rains have come it is advisable to spray for peach blight as quickly as possible for the dampness will soon germinate the spores and the spray should kill them before the thread like mycelium enters the buds; otherwise spraying will avail nothing. A 5-5-50 Bordeaux spray now will probably check the fungus; a few weeks later it will do litttle good.

## AVOCADO CONVENTION NOTES

Farm Adviser Walhberg of Orange County welcomed the visitors and invited them to return to attend a persimmon institute to be held at the Santa Ana high school, November 24.

At the request of President Popenoe Mr. Braunton of the California Cultivator staff announced that hereafter that journal would publish one page per month, not less, of avocado literature, news, etc.

Dr. J. Eliot Coit, speaking on plant phenomena said that in a lot of six trees of the Walker variety two bore 100 fruits each; the others none. Some Fuerte trees observed bore 500 fruits each; others none. The same was true of Taft trees, though all mentioned were exposed to cross pollination from other varieties flowering at the same time. Blooms that develop in coldest weather may be chilled so fruit will not set. The same lack of functioning could also be due to hot weather. It is plain, however, that failure to set fruit is not altogether due to climate. In regard to culture he recommended deep plowing only in autumn.

Dr. A. B. Stout, speaking on failures to pollinate, said it might be due to mechanical interference, heat, cold, etc. Trees may not interpollinate, due to a number of causes, or it may be due merely to incompatibility. He called attention to many points in the Nirody report, printed in the last avocado year book. Therein it is shown that Taft blossoms are receptive only in the forenoon, while the pollen is shed in the afternoon—too late. Many other avocadan inconsistences are shown in this report. One abnormality observed by Dr. Stout was 12 stamens in each of several Harmon blossoms—a double set.

K. A. Ryerson of the Los Angeles farm advisers staff, gave a talk on fertilizers for avocados, but admittted no trial plots are of sufficient age to warrant conclusions, so the only basis to work on at present is the fertilizing experience with citrus trees.

The only systematic fertilizer experiments on avocados known to the Cultivator were being carried on at the Huntington ranch by Wm. Hertrich, but these were cut off by the freezing of the trees in January of the present year.

## DATES NEAR SEA COAST

By Paul Popenoe

In an article on dates in Texas in your issue of October 28 you infer that sea coast conditions are quite different from those in the native home of the date. On further consideration, however, I believe it will appear that the date is, in all probability, a native of some sea coast, as its adaptation to withstanding heavy irrigation and salt water suggests.

At any rate the greatest commercial production of dates in the world at the present time is that around the head of the Persian Gulf, so near the sea that the gardens are irrigated by river water which is backed into them by the tide of the gulf.

Some of the best varieties grow in eastern Arabia on the sea coast, alongside the mango, banana, papaya, and coconut.

The principal commercial production of dates in Egypt is near the Meiditerranean, especially around the city of Alexandria.

Date palms have fruited successfully for many years in parts of India, and also, more rarely, in Cuba and other islands of the West Indies. Successful fruiting is also reported from Southern Florida.

Although the desert parts of Southern California seem to be almost perfectly adapted to the date palm, yet this plant has a wider commercial range than is often supposed.

## OLIVE GROWING IN THE SOUTHWEST

"Olive Growing in the Southwestern United States" by C. F. Kinman, pomologist of the United States department of agriculture, is the title of Farmers Bulletin 1249 just issued. It discusses briefly history and extent of olive culture in northern, central and southern California and in Arizona, then takes up consideration of varieties, culture, processing, diseases and pests. It may be secured free by request to department of agriculture, Washington, D. C.

The foreword says:

The introduction of olives into southern California took place 150 years ago, when the Franciscan Fathers made the first plantings near the San Diego Mission. Since then olive growing has become widely disseminated in many parts of California, in Arizona, and to a very limited extent in a few other sections, although it is only within the past 30 or 35 years that the olive industry has assumed a place of importance in the commercial fruit industry of the United States.

The olive can be grown successfully only in a comparatively mild climate. A temperature of 10 to 14 degrees Fahrenheit above zero is likely to prove disastrous to the tree, and the fruit will usually be injured by a drop below 28 degrees. Furthermore, there are other limitations. Although the tree thrives fairly well in the humid regions of the South where the temperature conditions are favorable, fruit production there is not sufficiently dependable to justify the planting of trees. The dry atmospheric conditions of California and the arid Southwest where the temperature range is favorable and where irrigation supplies the necessary soil moisture appear to meet the requirements of the olive.

Though few fruit trees withstand the limited soil moisture that the olive can endure, it likewise responds, as do other trees, to favorable soil conditions; in fact, it is only under such conditions that regularly successful results can be expected.

## CITRUS SURVEY RECORDED

M. B. Rounds, chairman of the citrus growers department of the Los Angeles County farm bureau, reports splendid progress being made on the cooperative citrus orchard survey which is being conducted by the department and Prof. R. S. Vaile of the citrus experiment station. This survey was outlined several months ago at which time it was expected that approximately 400 records covering orchard practice with respect to fertilization and irrigation would be secured. Approximately half of the survey has been completed at the present time and Prof. Vaile has on file more than 200 complete orchard records as a result of the work done to date. Preliminary study of these records already indicates some very interesting results. It is apparent that a marked correlation exists between the amount of nitrogen contained in fertilizers applied and the yield in field boxes. So far the data accumulated tend to show that maximum yields are being secured by those growers who use approxi-

## SUPPORTS FOR VINES

Prof. Frederic T. Bioletti is author of Circular 252 of the college of agriculture, agricultural experiment station, Berkeley, "Supports for Vines." Prof. Bioletti says in his opening paragraphs:

"Vines cannot be grown economically without some form of support. With some varieties and some forms of pruning it is possible to obtain fair results without even the ordinary grape stakes, but the cost in extra labor, deferred bearing, and imperfect vines is greater than that of suitable staking or trellising and requires exceptional skill and experience.

"The supports needed are of two kinds, temporary and permanent. The temporary supports make it possible to obtain quickly and economically a well formed, sound trunk, free from irregularities which interfere with cultivation and harvesting, and from defects and wounds which diminish the vigor and the longevity of the vine. These supports are needed only until the vine is large and stout enough to support itself or to be supported by a permanent trellis, a period of from three to six years, according to the form of pruning adopted, and to the rapidity of development of the vine."

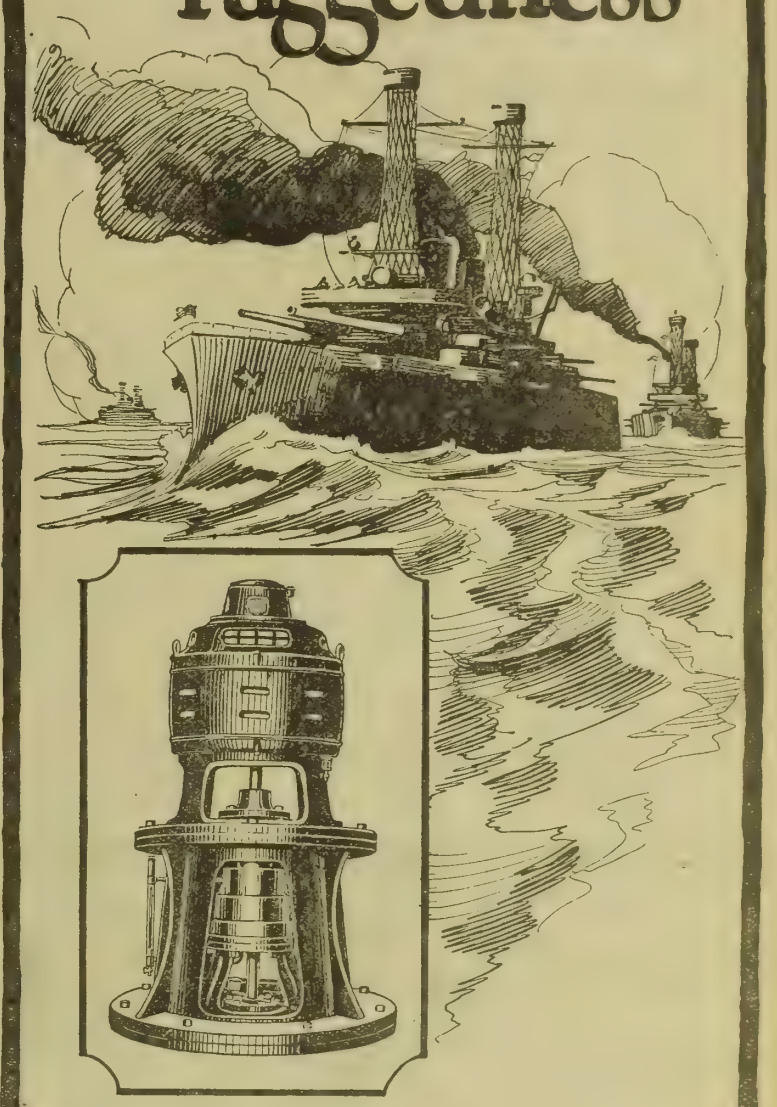
## AVOCADO BOOK COMING

A. R. Rideout of Whittier, has sent notices to members of the California Avocado Association that he will have ready for sale, about January, a splendidly illustrated book on avocado culture. He wishes all prospective purchasers to send in their names, but no money, and when book is ready he will notify them of issuance and the price. Mr. Rideout's past writings on things avocadan have proved very interesting to the officers and early members of the association.

pumps built with battleship ruggedness



The unwavering confidence the Layne & Bowler owner places in his pump is no longer a matter for wonder when you have learned of the ruggedness, the stamina, the enduring quality of Layne & Bowler Pumps. Every casting is amply proportioned to insure excess strength at every point of stress. Liberal dimensioned bronze bearings give durability and provide ease in operation. Although rugged in construction every part is perfectly balanced.

It's high time now to begin the installation of the new pumping plant you have been planning. Request full information regarding these pumps.

# What Varieties of Peas Will Grow Best in Imperial

MUCH work has been done to determine varieties of peas best suited to Imperial Valley conditions and more is being carried out. E. L. Garthwaite, farm adviser of the county, outlines results of plantings made and contemplated:

About 75 per cent of the peas grown in Imperial Valley are of the Dwarf Telephone variety. The characteristics of this pea which make it especially valuable are that it is a heavy yielder and good shipper, has well filled pods, is a "dwarf" variety, and sells well on the market.

There are a number of varieties of peas which have some characteristics of the Dwarf Telephone. Whether or not any of the very large number of varieties of peas have enough desirable characteristics superior to those of the Dwarf Telephone can only be found out by actual test.

In comprehensive tests, carried out by the United States experiment farm at Bard in Imperial County, over a period of three years, the Pride of Cahuenga, the Little Marvel, and the Yorkshire Hero outyielded the Dwarf Telephone. In 1917 those three varieties besides the Premium Gem and the Notts Excelsior outyielded the Dwarf Telephone. In 1918 the Dwarf Telephone produced less than the Pride of Cahuenga, the Little Marvel and the Yorkshire Hero, Premium Gem, Stratagem or Alaska. It is apparent, therefore that it is not superior in yield to all other varieties, even though it gave the largest tonnage of all in 1916.

All the plantings were made on October 2. The main crop of Dwarf Telephone was not picked till April 10, while the main crop of Little Marvel and Alaska was picked March 20, and the Premium Gem, Nott's Excelsior and Stratagem all produced their main crop a week ahead of the Dwarf Telephone. This factor of earliness might make all the difference between profit and loss, even discounting the danger from frost. The first peas to go on the market nearly always bring several times the price per pound that later peas bring.

The earliest of all varieties tried by the University of Arizona agricultural experiment station at Yuma was the Gradus. Planted in November of last year the main crop was ready for picking when the January 20 frost killed it to the ground. No other variety would have been ready for picking for a week. Had local growers planted this variety it is quite probable that the main crop would have been picked and sold by the time the frost came.

After all the peas had been killed to the ground by the frost the first variety to recover and put on a full crop for harvesting was the Dwarf Gray Sugar, consequently this variety was the most profitable of any of the varieties grown.

From time to time energetic farmers and distributors in Imperial Valley have tried out different varieties of peas and come to the conclusion that they were no good, bad or indifferent. At least the results of the trials have not been made public, and growers throughout the valley are in doubt as to whether the Dwarf Telephone is the very best variety or not.

In order to carry out comprehensive tests, which have been carefully planned and will be carefully carried out and the results accurately recorded and tabulated, the agricultural extension service has drawn up a project to cover the ground fully. Growers who intend planting peas will be asked to devote one to five acres of their tract for the purpose of testing out the different varieties. Each plot will be carefully measured, staked and labeled and planted to a variety recommended by the United States experiment farm at Bard, the Yuma station of the University of Arizona and by the University of California, and checked against the local favorite, Dwarf Telephone. After planting, careful inspections will be made of the plots several times. Detailed notes will be taken and put on prepared charts as follows: Location, number, and size of plots, diagram of same, type of soil and subsoil, previous crops for three years and their yields, preparation of soil before planting, and notes on diseases, weather, pests, etc.

Close observation will be made and accurately recorded as to yield in pounds of the different varieties, dates of first picking, main crop and last picking, height of vines, resistance to heat or frost, quality of pods, price secured, shipping qualities, dates of planting and sprouting, rate and depth of seeding, width of rows, spacing of plants, dates of irrigations and dates of cultivations. When this extremely valuable information has been secured from a number of growers in different parts of the county and the results all tabulated, there is no doubt that a lot of very valuable information will be made available for growers, which is absolutely unobtainable now.

Varieties to be tried include Pride of Cahuenga, Yorkshire Hero, Dwarf Telephone, Little Marvel, Premium Gem, Stratagem, Gradus, Alaska, American Wonder, Alderman, Advance Dwarf Gray Sugar, Thomas Laxton, Horsford Market Garden, Laxtonian, and Improved Extra Early.

Growers in different parts of the county are enthusiastic over the test and a number have agreed to take part in this important work. Any other person interested in coooperating with the agricultural extension service along these lines should communicate at once with the farm adviser in El Centro.

# Legal Queries

**Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.**
**Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When queries are wished in Cultivator address query to 317 Central Ave., Los Angeles.**

### Damage from Irrigation Water

Two parties own adjoining farms. One of these parties permits his irrigation water to escape through gopher holes and drowns out the other's alfalfa. Is he liable for damages?—Subscriber, Lemoore.

This matter has been decided almost invariably under the rule that one should so use his own property as not to injure the property of another, so that the party bringing upon his land water or other substance which is permitted to overflow onto the land of another is answerable for all damages caused thereby.

### Foreclosing Mortgage

I gave a mortgage upon my farm. If I do not pay the mortgage, can the mortgagee collect anything besides taking the land? I have other property.—Subscriber, Selma.

The mode of procedure is for the mortgagee to bring suit to foreclose the mortgage. He obtains a judgment against the mortgagor upon the note for the principal of the note, his costs and usually attorney's fees, if the mortgage so provides. He then has the sheriff sell the mortgaged property. The amount brought on sale is then returned by the sheriff in partial satisfaction of the judgment and the mortgagee is entitled then to what is known as a deficiency judgment which can be levied against any other property of the mortgagor.

### Mutual Deeds

In case of the death of a husband is there any advantage to the wife in having her name upon the property with her husband's? In the case of mutual deeds what protection have the children on the death of either party?—Subscriber, Porterville.

In case a conveyance of real property is taken in the name of husband and wife the presumption is that the married woman takes the part conveyed to her as tenant in common unless a different intention is expressed in the instrument, that is to say, the presumption is that husband and wife own an undivided one-half interest in the property. In case the name of the wife is not in the deed, the presumption, of course, would be that it was either the separate property of the husband or was community property. If the wife has the undivided one-half interest, then, of course, that one-half interest is not subject either to probate or to disposition by the husband by will, his estate taking only the undivided one-half, and in case of the death of the wife, the presumption would be that her one-half would be subject to her disposition by will or go to her heirs instead of going to the husband without administration, as if her name did not appear. As to the question of mutual deeds, the writer does not quite understand what this means. Of course, if deeds have been delivered one to the other, and there is no contest as to the fact of such delivery, the person holding the deed would obtain the whole of the property. Such action might be subject to contest by children, however.

### Joint Tenancy

We have one child. Our property is held in joint tenancy. Is a will necessary? What portion of the property can I give to the church? If my daughter dies leaving no children, can her husband claim a portion of the estate or would it all go to other relatives?—Subscriber, Walnut Hill.

If the estate is all held in joint tenancy by the husband and wife, upon the death of either the whole of the property goes to the survivor. There is, therefore, no necessity for a will and no property which a will could operate upon. Upon the death of the survivor the property would go to whomsoverer the survivor might will, or, in case there was no will, then it would go to the daughter if she was then living, and if she died without issue, prior to the death of the survivor and there was no father or mother of the deceased living, then the estate would go in equal shares to the brothers and sisters of the surviving decedent and to the children or grandchildren of any deceased brother or sister by right of representation. The husband of the daughter, in case of the death of the daughter as stated, would not take unless by will. In order to effect a bequest to charitable uses, it must be done by a will executed at least 30 days before the decease of the testator, provided that no such devise or bequest to charity shall collectively exceed one-third of the estate of the testator who may leave legal heirs.

### Storing Another's Property

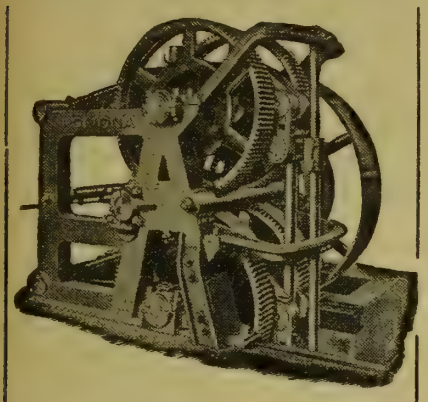
Several months ago a party left a small amount of personal property with me, saying he would return soon and take it away. I need the room occupied by the goods and do not know where to locate the owner. What should I do to remove them from my premises?—Subscriber, Orland.

It would probably be sufficient for you to remove them to a storage warehouse adapted for the storage of such personal property and leave them in care of such warehouse, such as you use to store your own property, and then give the best notice that you can by addressing a registered letter to his last known post office address. In such instance you have done all that you can and all that a reasonable person would be required to do.

### Collecting for Care of Orchards

I am taking care of several different orchards. The owners promised to pay as soon as possible. The places are all mortgaged and I have to pay from my own labor. How long can these accounts run and how can I collect if I insist on payment?—Subscriber, San Gabriel.

If you keep book accounts of your dealings with these different parties and render to them, from time to time, accounts for your services, then an action may be brought at any time would have no lien upon the property unless you might file mechanic's lien every time you do any work which would be rather expensive and troublesome. Otherwise, your only means is to take personal action against the parties employing you, in which action, of course, you could attach any property which they have. Such attachment would, however, be subordinate to the lien of any mortgage upon the property, and in case of foreclosure of the mortgage you would lose your attachment lien and be forced to resort to other property of your debtors.



THE POMONA

Duplex Plunger Deep Well Pumps

are solving the pumping problems for many users during the period of low water levels. They will lift the water to the surface, and, if desired, deliver it to high elevations above ground and at lower power cost than any other system of pumping water.

Which costs more ~fair weather or foul?

Violent storms are not the only enemies to good shingle roofs—gentle rains, aided by the warping effect of warm sun and drying breezes, are more frequently the real cause of deterioration. Repair bills prove it.

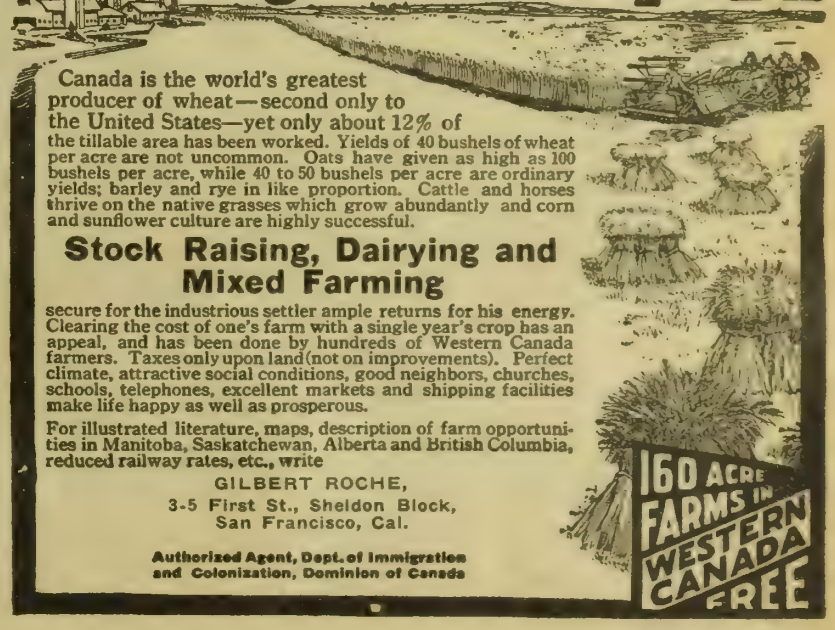
A well-laid roof can be *kept* tight and strong by treating it every few years with ORONITE SHINGLE OIL, the high quality preservative made by Standard Oil Company (California) especially for the care of shingle roofs and side walls. ORONITE SHINGLE OIL penetrates the wood fibre, helps prevent warping and cracking,—cuts repair costs. In fact, it postpones indefinitely the expense of a new roof.

Talk over color-mixing formulas with our nearest agent. Let him show you, also, how easily ORONITE SHINGLE OIL may be applied.

STANDARD OIL COMPANY
(California)

ORONITE SHINGLE OIL

WESTERN CANADA for Big Wheat Crops



Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon. Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

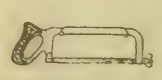
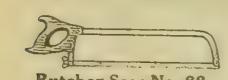
# ATKINS
## SILVER STEEL SAWS

## Cut Faster, Easier and Last Longer

THERE'S a three-fold saving when you use an Atkins Silver Steel Saw. Saves time, energy and money, because it is made of the famous *Silver Steel*—the finest saw steel in the world. That's why Atkins Saws take a keener edge, cut many times faster, run easier, stay sharp longer, need less filing, and outlast ordinary saws.



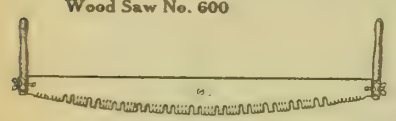
Hack Saw Frame No. 10



Butcher Saw No. 88

Wood Saw No. 600

When you need a hand saw, cross-cut saw, circular saw, buck saw, pruning saw, power drag saw, meat saw, hack saw or any other saw—an Atkins will do the work quicker, easier and better. Ask your hardware dealer for the Atkins Saw you want. If he does not have it, write us at once. We'll see that you are supplied.



Cross-Cut Saw No. 5

# Questions and Answers

**Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.**

### Red Spider on Walnuts

I have walnut trees that are badly damaged with red spider this season. Leaves dropped badly, also nuts which are very light. Can you tell me what is the best way to get rid of them? The orchard has had a cover crop sown in it for many years past—vetch until the last three years, since then, clover. Would it be best not to put in a cover crop for a year or two? About every two years the spider seems to damage the crop badly. Would lime-sulphur in the spring be good. The trees were dusted for the first time this summer for aphis. Trees are 25 years old, 40 feet apart. Orchard has run about one ton to the acre in nuts. The spiders when clustered together are about the color of a ripe orange. Ground is covered with a white web.—Subscriber, Fillmore.

Here is a question which our subscribers can aid in answering. As a suggestion meantime, continue to grow the cover crops; the soil needs them. As soon as well established the cover crop may be well dusted with dry lime-sulphur or simply with pure sulphur. This should control the pest on the cover crop. In the springtime the trees may be sprayed with the commercial lime-sulphur solution or again may be dusted with dry lime-sulphur. In any case we would not allow the spider to prevent any benefit to the soil.

### Blackberries Not Ripening

What shall I do for black knot forming on blackberries? My bushes produce heavily but the berries do not ripen. What is the cause?—Subscriber, Hayward.

Owing to lack of detail we cannot say if your berry plants have crown gall or nematodes. In either event it would probably be better to start anew and in a new soil. It may be that the root trouble prevents ripening; it could easily do so. But complaints this year from up and down the coast for a thousand miles lead us to believe the cause climatic and seasonal. Lack of ripening is more prevalent this year than ever before. Many things could cause it, but when common over all the state it is probably due to climatic conditions peculiar to the past summer.

### Grafting Black Walnut Roots

When should black walnut roots be grafted and how should grafting wax be made?—Subscriber, Orange.

Black walnuts should be grafted in the spring just before they start to grow. February is usually the best month to do this work. See our issue of February 4 last which under the heading "Grafting Walnut Trees" fully describes grafting methods. (Copy has been mailed this inquirer). The following formula for making grafting wax is a good one: Rosin, 4 pounds; beeswax, 1 pound; linseed oil, 1 pint. The rosin and beeswax are melted in a kettle and thoroughly mixed with the oil while in a liquid condition. Some nurserymen recommend pulling the wax like pulling taffy candy, claiming that it makes a more desirable compound, but we do not know that this is necessary. The wax must be applied while hot but care must be exercised to see that it is not hot enough to injure the grafts.

### Gum on Grapefruit

Please inform me through the Cultivator the cause of gum appearing on young grapefruit trees. The gum appears on the trunk of the tree above the bud, it forms in lumps then the ants eat the gum also the bark and finally it dies.—Subscriber, El Centro.

Gum on grapefruit or other citrus trees may be caused either by improper irrigation or by planting too deep. The bud union should always be well above the level of the ground. This is especially important when planting in heavy soil. Excessive irrigation or allowing the trees to suffer from lack of moisture between irrigations will cause gumming.

Cutting out the diseased bark and gum pockets and painting the entire trunk of the tree with Bordeaux paste will give relief provided it is done before the gumming has girdled the tree, but the only cure for it is to find the cause and correct it.

### Light Crop of Walnuts

We have two walnut trees, eight years old, and apparently strong healthy trees. Although they bloomed profusely they have a very light crop, not as many as two years ago. Could it be lack of fertilizer? How much would be necessary and how often should they be irrigated?—Subscriber.

Seedling walnut trees frequently act as described in the question and if these are seedlings the remedy is to top graft them this next February to a variety known to be a good producer in your locality. If the trees are grafted and the variety good the trouble may be from want of water late in the year. There is no set rule as to time of irrigation but the irrigations should be frequent enough to keep the soil in a moist condition until the nuts are ripened. This moisture condition must be continuous as very radical changes from dry to wet sometimes cause the fruit to drop—J. B. N.

### Importing Plants

Is it allowed to import trees to this country from Europe? In Moravia, now Czecho-Slovackia, we had many fruits I should like to send for.—Subscriber, Sonoma.

We doubt if you will be able to get the trees in from Europe as Quarantine No. 37 prohibits the introduction of any plants or seeds from a foreign country excepting by special permit. As we understand it this permit will only be granted where it can be shown that the plants are not now being grown here and are of such importance that they would prove a valuable introduction to this country and further that their introduction would not be likely to bring in any serious pest or disease. We would suggest that you write to the Federal Plant Board, Washington, D. C., and explain just what you wish to bring in and they will advise you fully as to the necessary procedure.

### Pruning Lemons

Should lemons be pruned, and if so, how is it done? Have a tree about ten years old and the whole center has grown up into what I should call "suckers" if they were in any other place, very long slender shoots growing straight up from center of tree. I have frequently clipped the spreading limbs to keep them out of my way, but tree is very thick and dense. Should it be trimmed out, or rather thinned out?—Subscriber, Santa Cruz.

Lemons need more pruning than any other citrus trees. Being rampant growers their tendency is to send out long whip like limbs and produce their fruit on the ends of these limbs where it is easily whipped about and scarred by the winds. Pruning checks this rampant growth and causes the fruit to be borne on the smaller fruit limbs forced out by such pruning. It is a hard matter to get a lemon tree back into proper shape after it has been let go for ten years or more. About all you can do is to cut out the sucker growth that you say has filled up the center of the tree, and possibly some of this should now be left if it leaves the top too open. Cut out or shorten in all other long whip like growth. Cut out all interfering limbs and try to avoid making the tree too dense as sunlight and air is needed to make the tree fruit on the inside fruit wood. It will be necessary to follow up the work with a later pruning to keep out sucker growth and thin out the top as the first pruning will stimulate an excessive growth of undesirable wood.

# Household Department

### PHILOSOPHY

Philosophy is good enough, when everything is fair,
To help us see the greater plan behind life's grief and care;
It's good for talking purposes when friends drop in to chat,
And it is fine to hear them say:
"I never thought of that."
But when a fellow's in the mud, beyond the slightest doubt,
The best sort of philosophy is first to help him out.

It's fine to fill your pipe and smoke and ponder various things,
To find the hidden benefit which every burden brings;
To build your faith in what is good and see the distant goal,
And learn that every test of care is tonic for the soul;
But when a friend is fighting hard and being put to rout,
The best sort of philosophy is first to help him out.

You take a man in trouble, doubt, or danger, or distress,
He doesn't want a lecture on his future happiness;
When he is up against it hard and faint and falling fast,
It's no use then to call to mind the errors of his past;
He doesn't want a moralizing, preaching friend about.
He desperately needs a chap who'll try to help him out.

We should be philosophical. All men should try to see
The purpose back of every care and all that has to be;
But many a philosopher stands on the river's brink
And calmly tells a drowning man that he must swim or sink;
And so I hail the willing man with arms and muscles stout
Who finds a man in trouble and jumps in to help him out.—Edgar A. Guest.

### ANNA AND THE CHERRIES

(Continued from Last Week)

"Hey?" shouted the wild man, putting his hand to his enormous ear and bending his head. "Speak louder!"

"A present!" screamed Anna, holding out her basket so that the cherries winked and sparkled in the sun.

The wild man looked down and frowned.

"More trash!" he grunted angrily. "Well, walk in and I'll dump them in with the rest, but don't think you're going to get any favors out of me!"

Anna wondered how she could walk in when the path was only three feet wide but the next minute the wild man had pushed heavily against the side of the cliff and open sprang a door of stone. He stooped and walked grumbling into the cave and Anna followed him, carrying the basket carefully through the dark.

At the end of the passage was an immense room so beautiful and glittering that it blinded Anna as she stepped into it. When her eyes could stand the brightness she lifted her head and looked around.

From the many walls of the star shaped chamber hung thousands of icicles filled with changing light as blue as the sky and as green as the sea. The floor was of marble, or of ice that looked like marble, and tiny fairy forests grew here and there upon it—but they were forests made of frost, ferns and flowers and moss of sparkling white. Now and then white butterflies fluttered through the air and fell softly, but when one settled at Anna's feet she saw that it was only an enormous snow flake.

The wild man came shuffling over and took Anna's basket of cherries.

"Sit down a minute," said he. "I'll empty this and send you back down the mountain. You can be thankful to get back the basket. Every century or so someone comes wandering up here bringing trash I don't need. I've bins full of it now, and when it comes to asking me to stop my winter walks over the peaks, all I can say is, you'd better not. It's a pity a man can't walk over the mountains and toss a snowball now and then without having someone travel up to see him about it every hundred years!"

Anna sat down timidly on a bench that was icy cold. There were tears in her blue eyes.

"Oh dear, dear me! Why did I come! Others have been here and tried to stop him and if they couldn't surely I don't dare mention it."

The wild man hurried back and threw the basket over at Anna.

"You might have brought redder ones," said he. "Those at the bottom of the bin sparkled twice as much as yours. Now be off; I've got a bear roast to attend to."

"Maybe they don't sparkle," said Anna timidly. "But they're very, very sweet."

"And I say they aren't half as beautiful as the others!" shouted the wildman. "Come and see if you don't believe it."

He led Anna into a tiny hall, the walls of which were lined with ice crystals like diamonds. On a low shelf against the wall were four bins with glass sides and the light that came from them hurt Anna's eyes like looking straight into the sun, for the bins were filled with jewels; grass green emeralds in the first, sapphires in the second, golden topazes in the third and rose red rubies in the fourth.

And in on top of the rubies the wild man had thrown the cherries. He thought they were jewels!

Anna began to wring her hands. What would he do to her when he found that she had brought only cherries!

"I say they don't sparkle half as much!" shouted the wild man again. "Anyone can see that!"

"Oh, I'm so sorry," began Anna, weeping with fright. "They are only cherries. I've never had any jewels. I thought if you didn't like them raw I could make you a cherry pie."

She threw her apron over her face and cried into it.

The wild man opened his mouth.

"Pie!" he murmured. "It's a thousand years since I tasted cherry pie!"

Anna stayed all afternoon and made a cherry pie big enough for a giant. Such delicious crisp brown crust and such juicy, sugary cherries! The wild man ate every crumb and licked his fingers. After that he listened quite sadly while Anna told him how many fruit trees and houses he had smashed to bits with his great snowballs.

If you want to find the wild man now, you will have to go to the farthest valley in the Alps. He has a cherry farm down between the mountains.

And when you buy cherries that are larger and juicier and sweeter and redder than any you ever saw before, those are cherries from the wild man's trees.

### "I CHOOSE"

Do you ever play—of course you do—"I choose this one;" "I take that one?" The household editor had the luck last evening to drop in on a fast and furious game of "I choose." Bob and Marion and Billy were bunched over the Cultivator, and each was having one "choose" to a page. She suspected that thoughts of Christmas added zest to the choosing for there were many suggestions that might help an amiable Santa Claus. It was surprising the things those youngsters found that the printer and the engraver didn't know they had put on the page at all!

Bob chose a radio set; Marion took "this little chair just for my very own," Billy chose a sail boat. Bob chose a kodak; Marion took a kewpie doll; Billy chose "a funny bug that will run on the floor." Bob chose a compass; Marion took a new dress; Billy chose a hammer. Bob chose a motorcycle; Marion took a play stove; Billy chose a windmill. And so they went on page after page. Marion chose a piano which turned out on second look to be an incubator but she didn't mind Bob's poking fun at her about it because she said "It was just a play piano anyhow" and to show her independence pounced on a letter C with a curly tail and said it was a dear little white kitten and she would choose that too.

It seemed that father was really responsible for starting the game for he had been looking the Cultivator over after supper, thinking that he needed a new motor and a pump and an auto and mother must have a new stove and the kitchen painted and an electric washer and a heating pad and some rose bushes and—"Say Mother," he called, "Let's have a Christmas pool." Let's put our Christman money—most of it—into a pool and then choose one

(Continued on Page 539)

# Good November Food
## For Men on Farms

The reading of newspapers and farm journals in easy chairs calls for different kinds of food than plowing days require.

Inactivity is particularly the foe of good health on the farm.

You need foods then that tend to do what exercise does during busy times.

**Stewed Raisins are luscious and effective**

Stewed raisins served with cream is a most delicious breakfast fruit-dish, and one that brings real winter benefits.

Eat them frequently when exercise is lacking. For raisins are 75 per cent fruit sugar in practically predigested form.

**Stewed Raisins**

One package Sun-Maid Raisins; 1 slice orange or lemon rind; 2 cups cold water.

Put raisins and water in sauce-pan and bring to boiling point. Add slice of orange or lemon and cook for 30 minutes. Sugar may be added, but it is not necessary. Stewed raisins being very rich should be served in small portions.

Sun-Maid Raisins should cost you no more than the following prices:

**Seeded** (in 15 oz. blue pkg.)—20c

**Seedless** (in 15 oz. red pkg.)—18c

**Seeded or Seedless** (11 oz.)—15c

*Red Package (Seedless) Best for Stewing*

And this sugar and the raisin skins make a mildly laxative food that's the most effective natural fruit-laxative we know.

Raisins furnish *food-iron* also—fine food for the blood.

You need but a tiny bit of iron daily but that need is vital. Stewed raisins will help you get your daily portion of it in a most attractive way.

The fact is, you will like this dish so well that it will be your regular morning fruit-food the year round.

Try it now and note how delicious. Try it every morning for ten days as a test. Decide then if it's also a health food that you need.

Always ask for

## HOUSEHOLD QUERIES

### Canning Pimentos

Will you please send me your recipe for canning pimentos?—Subscriber, Woodland.

The recipe for canning pimentos was given in the Cultivator of August 19, 1922, page 180, copy of which has been forwarded to subscriber.

### Spanish Herbs—Canning Time Card

Please send me names of grocers carrying Spanish herbs also time card for canning pork using wash boiler.—Subscriber, Buena Park.

Names of dealers carrying Spanish herbs have been sent to our subscriber. Complete timetable for canning vegetables, soups, fruits and meats will be found in the issues of June 24, 1922, page 682.

### Requested Recipes

Could you furnish me with the following recipes: Chicken tamales, chili con carne, genuine French bread, Boston baked beans, ways of salting or sugar coating almonds?—Subscriber, Marysville.

Chicken Tamales—Soak the corn husks in cold water for two hours. Place in a saucepan 2 cups chicken stock, 1 teaspoon salt, ¾ cup cornmeal. Cook until thick mush, cool and place in a bowl ¾ cup finely chopped chicken meat, 1 onion, chopped fine, 2 green peppers, chopped fine, 6 olives, chopped fine, 2 dozen seeded raisins. Mix thoroughly and then drain the corn husks. Spread a layer of the corn mush on one part, place a tablespoon of chicken filling in place and cover with more corn mush, forming a roll a little larger than a sausage. Tie securely in corn husk and place in a steamer or double boiler and cook for 1¼ hours. Other meat may be used to replace the chicken and water may be used in place of the chicken stock to make the mush.

Chili Con Carne—Cut 1 pound stewing meat into inch pieces and place in a saucepan 2 cups water. Cook slowly until tender, then add 1 cup baked beans, 2 onions, minced fine, 1 cup tomato, 1 teaspoon chili powder. Bring to boil and cook slowly for 20 minuates and then place in a bowl 4 tablespoons flour, 1 teaspoon salt, ½ teaspoon paprika, 1 tablespoon vinegar, 5 tablespoons water. Beat to dissolve and add to the chile con carne. Cook for 5 minutes and serve.

French Bread—Pare and cut 2 medium sized potatoes. Cook until very soft in three cups water. When cooked rub through sieve and cool. There must be two cups of this mixture. When it is about 80 degrees Fahrenheit pour into mixing bowl and add yeast cake crumbled in ½ ounce shortening (1 tablespoon), 1 ounce sugar (2 tablespoons), ¾ ounce salt (2 teaspoons). Stir to thoroughly dissolve and then add 8 cups flour. Work to a smooth dough then knead 10 minutes. Place in well greased bowl, turning dough over to thoroughly coat. This prevents a crust from forming. Cover bowl and set aside to rise for 3½ hours. Now lay over the dough by pulling toward center the sides and ends of the dough, until it forms a compact mass. Turn over the dough, cover and let rise for 1 hour. When ready for the pans cut or divide into 6 pieces and mold into loaves 3 inches thick and 12 inches long, rolling loaf on board, making pointed at ends. Place clean cloth in deep baking pan and sprinkle cloth with cornmeal. Place loaf of dough on cloth and sprinkle lightly with cornmeal. Now lift cloth up close to dough, making cloth partition between each two loaves. Let loaves rise about 45 minutes and when ready to bake lift dough carefully from cloth, lay on a baking sheet and gash slightly with sharp knife. Wash with egg and water and bake 45 minutes in hot oven, adding small saucepan of boiling water to provide steam to keep loaf moist while baking. One-half this quantity for small family.

Boston Baked Beans—Soak one pint of beans in plenty of cold water overnight and in the morning carefully wash and place in a saucepan and cover again with water. Bring to a boil and cook for 10 minutes and then drain and place in a casserole or baking dish and add ½ pound salt pork, cut into 2 inch blocks, 1 cup stewed tomatoes rubbed through a sieve, 4 tablespoons molasses, 1 teaspoon salt, 1 onion, chopped fine, ½ teaspoon pepper, ¼ teaspoon mustard. Mix well and add sufficient water to cover. Bake in a moderate oven for 3 hours.

Salted Almonds—Heat 1 tablespoon olive oil in chafing dish; add 1 cup blanched and dried almonds. Stir until evenly colored. Drain and sprinkle with salt.

## HINTS FROM HOUSEKEEPERS

### French Pickle

Will you publish this recipe for "French pickle" in the California Cultivator as soon as possible?

One bucket green tomatoes, ½ bucket ripe tomatoes, 2 big cabbage heads, 6 onions, 1 cup grated horseradish, 6 green peppers, 6 red peppers. Grind together and add one cup salt and let stand over night. Strain and heat but do not let boil, with 3 quarts vinegar, 3 pints sugar, 2 tablespoons mustard seed, 2 tablespoons celery seed, 2 tablepsoons cinnamon, 1 tablespoon black pepper.—Ethel Hollingshead, Fresno.

The pressure of the atmosphere at sea level is 14¾ pounds per square inch.

# Will Your Child Be Next?

Here are some startling facts:

"The New York State Health Department," says a leading national farm journal, "has found that twenty-one percent of the country school children have defective vision as compared with five percent of city children."

*Four times* MORE eye trouble in the country than in the city—*WHY?*

The farm journal gives its own conclusion: POOR LIGHT IN MANY COUNTRY HOMES!

**Install a Colt "Gas Well" and Get Sunlight After Dark**

How is your home lighted? Preserve good vision by installing a COLT "Gas Well." Live, work and read indoors under sunlight!

The COLT generates carbide gas which gives a clear, steady light exactly the color of sunlight. A *white* light—not a *yellow* one. A light that rests and soothes the eyes instead of taxing and straining them—"Artificial Sunlight."

Goes on at the twist of fingers, too—no matches.

Generated automatically by the COLT from carbide and water—no bother. Simple and economical—nothing to fuss and tinker with.

Use the gas also for cooking—a city refinement brought to the country home.

**From Factory to Farm**

The COLT comes to you complete and ready for installation from the factory—no dealers. Sold direct by COLT solicitors. Easy to install—within reach of all.

**You Insure Your Life, Home and Car**
***—Now Insure Your Family's Eyes***

Poor eyesight is a lifelong handicap. Don't burden yourself and children with it—*install Carbide gaslight NOW, before Winter with its long nights sets in.* Easy and quick to do. Dependable and preferable—a half million in rural communities use it. Just drop us a postcard and we'll give you full particulars.

## J. B. COLT COMPANY

30 East 42nd Street, New York — 8th and Brannan, San Francisco

# Unbounded Faith

Years ago Grandmother learned that the secret of health is to keep the powers of resistance strong. That is why her faith in

# Scott's Emulsion

remains unbounded. For fifty years it has had world-wide recognition as a tonic which is rich in health-building vitamines, *to nourish and help keep the powers of resistance strong.*

Scott & Bowne, Bloomfield, N. J. 22-44

# Marvel Ant Exterminator

## I guarantee to rid your premises of ants

The time to permanently rid your premises of ants is in the fall and winter. My Exterminator is a slow acting poison that the worker ants eat and carry to the nests where the producing queens and males stay. A can on each ant trail does the work. Absolutely safe—the cans are always sealed, never opened. The ants crawl through small holes to reach the poison. 60c per can; 6 cans $3.00. SPECIAL PRICES TO ORCHARDISTS. Ask for literature.

Ask Your Dealer—If he hasn't them, send direct giving dealer's name. Look for "NU-WAY" on buckles. Accept no substitutes.

Nu-Way Strech Suspender Co.
Dept. E7111 Adrian, Mich.

### CHARMS

By Louise Driscoll in the Milwaukee Arts Monthly

I heard the hooded owl cry,
He told me to go carefully.
There was no path at all, but I
Tried not to let the moon get me.

I wanted to go on and see
What magic waited—so I made
A little charm that I could say
To keep me unafraid.

Briar, thistle and thorn
And teasle seed,
Mandrake apple unborn,
Wait on my need!

Close the evil way,
Give me the scent I know,
Turn me when I stray,
And let me go!

The wood that I went through
Was full of muttering.
I felt the edge of fur
And wind of wing.

Partridge-berry, burn!
Willow-wand, bend!
Show me the turn.
Lead a friend.

Then the offended moon
Drew her scarf of blue
Over her wicked eyes
As if she knew

She couldn't catch me
In her silver net,
But I thought perhaps
She was watching yet.

So I said—

Small blue flower
With a green hood,
Mark my way
Through this wood.

Thimble-berry
And red rosehips,
Give your grace
To my fingertips!

### SMOOTH INSIDE

A private was shaving himself in the open air when his sergeant came along.

Sergeant: "Do you always shave outside?"

"Of course," answered the private. "Did you think I was fur lined?"

### AN IMPROVEMENT

Doctor—You cough with much greater ease this morning.

Patient—I ought to; I have been practicing all night.—Medical Pickwick.

### AN INSINUATION

"I was told," he said, "in my early youth, that if I didn't quit smoking cigarettes I'd be feeble-minded when I grew up."

"Well," answered she, 'why didn't you quit?"

### DON'T BE UNEASY

The mistress—Really, Justine, you are wearing very pretty silk stockings. The maid—Don't be uneasy, madam; I got these at my last situation.—London Opinion.

### FISHERMAN'S WIT

Owner—Here, what are you doing? Don't you know you're not allowed to take fish out of this water?

Angler (three hours without a catch)—I'm not taking them out. I'm feeding them.

### A POOR RICK

"I don't blame you for turning out 'best sellers' and getting rich at it," said the author's friend, "but you ought to write something for posterity."

"Can you imagine me buying a motor car and telling the dealers to charge it to posterity?"

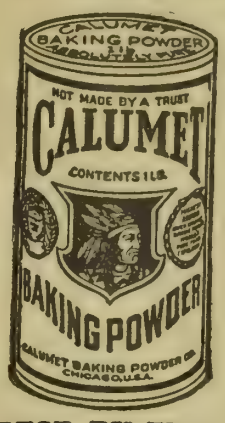
### QUALIFIED

Negro Rookie—I'd lahk ta have a new pair o' shoes, suh.

Sergeant—Are your shoes worn out?

Rookie—Worn out! Man, the bottoms of mah shoes are so thin Ah can step on a dime and tell whether it's heads or tails!—Arkansaw Thomas Cat.

# BEST For a Generation



American housewives are using Calumet Baking Powder today with the same success that their mothers experienced over a third of a century ago. This perpetual growth of favor has made

### THE THANKSGIVING DINNER

THANKSGIVING is a happy day for the family circle, even including the cook. Perhaps we should say, especially the cook, for she is usually the house mother as well who is as happy as she is busy in bringing together her loved ones on this day. That it may this year be even more than ever before a day of happy reunion here are suggestions for a simple Thanksgiving menu which may practically all be prepared the day before so that the mother may be the unhurried and unworried and unwearied center of the feast.

#### Table Decorations

The fruits and nuts which will be used for dessert make the most beautiful and appropriate Thanksgiving centerpiece, emblematic of peace and plenty. These may be prepared the day before, red apples polished, bananas wiped clean, grapes washed and drained, choice raisins and dates and dried figs prepared, nuts cracked, and all arranged in bowl or platter or hollowed half of a pumpkin. Cover with paper or cloth and set away on pantry shelf ready to be placed on the dining table the next morning when the table is set.

#### The Menu

Oyster Bisque Olives
Roast Turkey Olive Stuffing
Creamed Cauliflower
Candied Sweet Potatoes
Cranberry Jelly in Orange Cups
Orange and Cherry Salad
Pumpkin Pie Coffee
Fruits Nuts and Raisins

#### Oyster Bisque

Six cups milk, 2 eggs, 4 tablespoons butter, 4 tablespoons flour, 4 cups oysters, 2 teaspoons chopped parsley, mace, salt, pepper, cayenne. Cook oysters in milk until edges curl. Strain, reserve liquor and chop oysters; press through a sieve; add butter and flour cooked together, seasonings and cook five minutes, add to eggs slightly beaten and serve.

#### Roast Turkey

A good turkey should be plump, the cartilage at the end of the breast bone soft and pliable, and the legs smooth. If very young there will be many pin feathers. These and all the feathers should be carefully removed. Then scorch well by holding over a direct flame, burning paper or otherwise. With a sharp knife cut through the thick skin on the leg 1 inch below the knee. Break the bone at this point. Insert a stiff skewer under each one of the tendons found on the back and front of leg and pull carefully, removing as many as possible. A few may break. Then remove the leg, leaving an inch of bone below the joint. When baked this will come off easily, leaving a fresh, unburned end. Split the skin down the back of the neck and cut the neck out even with the shoulders, leaving the skin loose. Remove the crop, windpipe, etc., from the neck. This can be done, especially if the crop is full; otherwise, remove the rest of the entrails, loosening thoroughly by breaking all the connecting membranes with the finger. Be careful not to break the skin over the breast. Remove the oil sac from the tail. Insert sharp pointed knife and cut vent loose from the skin. Make an incision under the left leg. Insert the fingers and break through the membrane. Then work the fingers up around between the breast and the intestines, and around next to the back thus loosening everything. Take hold of the gizzard and remove carefully, bringing with it all of the entrails. See that the lungs and kidneys, which lie against the back, are removed.

Put fowl into a pan of water to which has been added 1 teaspoon soda for every 2 quarts water. With a small cloth wash carefully inside and out, rubbing the skin well. Then rinse thoroughly, letting plenty of water run through the fowl. Dry well. Lay the fowl on the back, season inside with salt and pepper and stuff the breast until it is smooth and plump. Fold the skin of the neck down on the back and pin with a small steel skewer. Stuff the body of the fowl, press the legs close to the body, hold firmly with one hand and with the other push the thigh up into the side. Fasten with a skewer run through from one leg to the other. Lay wings to the body and fasten with a skewer. Insert a skewer under the tail. Wrap a piece of cord around the tail, bringing one end up on the right side, wrapping it twice around the leg skewer, then up around the wing skewer across under the back, repeating the process on the left side, bringing it down and fastening at the tail. Season all well and rub over with melted butter.

Prepare and stuff the turkey the day before. If it is a large turkey, weighing over 10 pounds, it would be best to bake it for an hour the night before, leaving it in the oven as it cools off. Then start the baking again about 8 o'clock in the morning, keeping the temperature very low and basting from time to time. While baking it should be laid first on one side, then the other and as soon as browned turned on

Denver, Colorado, U. S. A.

the breast and left there until a few minutes before taking from the oven when it should be turned on the back, allowing the breast to brown.

**Assuring Tender Turkey**

To assure a tender turkey, if you have facilities for cold storage, have it killed 3 to 5 days before the day you wish to use it. If you have not ice storage kill it one or two days before. Steaming before roasting will make certain a tender bird. When ready for cooking place in bottom of large vessel—wash boiler does very well—a bucket or steamer to hold turkey out of water. Then fill boiler with hot water to come just up to the turkey. Cover tightly and steam about 20 minutes to the pound. This will cook bird thoroughly. Remove from boiler and fill with dressing. Then place in moderately hot oven and baste every 10 minutes for about 40 minutes till well brown.

**Stuffing**

Stuffing for small turkey (double quantity for large bird). Two tablespoons melted butter or bacon fat, one tablespoon chopped onion, 3 cups soft bread crumbs, chopped liver and heart, one teaspoon salt, one teaspoon poultry seasoning, one tablespoon chopped pickles, one-fourth teaspoon pepper, one-half cup chopped walnuts, one cup ripe or green olives.

**Creamed Cauliflower**

Separate cauliflower into sections, wash well, and cook in boiling salted water until tender, about 30 minutes. Drain and cover with medium white sauce made by melting four tablespoons butter in sauce pan, adding smoothly four tablespoons flour and gradually two cups of milk. Stir constantly till it thickens, add salt and pepper to taste.

**Candied Sweet Potatoes**

Wash, pare and parboil 8 good sized sweet potatoes. Drain, cut into lengthwise slices about one-half inch thick and lay in a baking dish. Spread thickly with a syrup made from one-half cup butter, one cup brown sugar and one-half cup hot water. Bake until tender, basting frequently with syrup in the pan.

**Cranberry Jelly in Orange Cups**

The cranberry jelly can be made the day before, reheated in the morning and poured into the orange cups. The orange cups may be prepared by cutting well shaped oranges into halves, crosswise. Remove pulp carefully so that it can be used for salad. If desired, scallop the edges and fill with the cranberry jelly, putting in a cool place to set.

Four cups cranberries, 3 cups sugar, one-half cup cold water. Wash cranberries, add water, and boil 20 minutes. Press through sieve, add sugar, and cook 3 minutes. Pour into moulds and allow to set.

**Orange and Cherry Salad**

Remove the white membrane from the pulp of 4 oranges and cut each section in half, crosswise. Mix 2 cups pineapple, cut into cubes, with 1 cup candied cherries, halved, by tossing together with forks. Add orange and cover the salad with lemon cream sauce.

**Lemon Cream Sauce**

To 1 cup cream, whipped, add 8 tablespoons sugar and 6 tablespoons lemon juice. Pour over salad.

**Cultivator Pumpkin Pie**

Cut up small pumpkin, put in steamer or covered colander and steam till soft, then remove peel; put on pan in oven and leave door open till it is dry but be careful not to let it brown or bake. Press through colander and measure. To 2½ cups pulp add 2 cups cream or very rich milk, 1 teaspoon each salt, butter, cinnamon and ginger, 1 tablespoon molasses, sugar to taste, and after cooling and beating well, 2 well beaten eggs or yolks of 4. Make rich pie crust, line extra large and deep tin and leave an edge on top. Pour in pumpkin, bake slowly 40 minutes, or a little longer, till there is a good brown crust on top. Serve very cold and all around the edge put large spoonfuls of whipped cream. The pie will of course be made the day before.

**"I Choose"**

(Continued from Page 535)

big thing we all would like to have for our house instead of getting a lot of little things that maybe we don't care so much about. What would you like most of all, anyway?" "O—" said mother, and looked at the kitchen floor. "That means linoleum, I'll bet" said father. Mother smiled and said "It just does, but there's a lamp for the living room, and a real desk for your papers and a rug in the boys room and a new dining table and pretty paper on Marion's room and an auto robe and—O, my goodness, such a lot of things!" "Well," said father, "I guess we'll have to make a pool of all the wishes too and pick out just one." "A wish pool," broke in Marion, "O that's more fun than a fish pond." I choose—and they were off, Bob and Marion and Billy, on a wishing game.

"Good idea," the household editor, thought on the way home, "Believe I'll tell the other Cultivator folks about it."

**BE A MEMBER**

The drive for Red Cross membership is a regular annual function of the American people; this year it is November 11-30. There may be little need for this organization in war relief at this moment but the Red Cross insists that it makes for efficiency in peace times as well as in time of war. Be a joiner of the Red Cross.

## New Lamp Burns 94% Air

### Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

## CURING MEAT ON THE FARM

"MEAT Production on the Farm" is the title of a timely book issued by the E. H. Wright Company, 819 Broadway, Kansas City, Missouri. It gives in 32 pages practical information on selection of meat animals, preparations for slaughtering, slaughtering, scalding and scraping, dressing carcass, cutting carcass, trimming hams, rendering lard, curing and smoking, dry curing, brine curing, saving spare parts, liquid smoke, wrapping cured pork, sausage making, etc. Pork, beef and mutton are all carefully treated. Many pages of specific recipes for use of liquid smoke follow, a few of which we give below.

Copies of this book may be secured free on request to address in first sentence above.

### Smoked Country Sausage

The following recipe makes what is known as "smoked country sausage," a product in high favor with city buyers:

Eighty-five pounds lean pork, 15 pounds beef, 1½ or 2 pounds salt, 4 ounces black pepper, 1 ounce red pepper, 1 ounce mace, 1 ounce sweet marjoram.

Thoroughly mix the seasoning ingredients. Cut the meat in small pieces, spread it out on a table and sprinkle the seasoning over it. Then run it through the grinder, using the small plate, and mix into it thoroughly one large tablespoon condensed smoke for each 50 pounds of meat. After it has stood in a cool place for 24 to 36 hours, stuff it into casings. Dip in liquid smoke about 30 minutes. Drain well and hang up to dry. A week later dip again and hang up for another week when they will be ready for use. For second dipping ten minutes is enough.

### Bologna Sausage

This is another very popular style of sausage of excellent keeping qualities.

Forty pounds pork, 60 pounds beef, 20 pounds water, 1½ or 2 pounds salt, 4 ounces black pepper, 2 ounces mace, 1 ounce coriander.

Cut the beef into very small pieces, or put it through the grinder, using the coarse plate, and let it "cure" 36 hours in a cool place. Then grind it very fine, put the pork through the grinder, using the medium plate, and mix the meats, seasoning and water. Work the mixture thoroughly until it becomes sticky and takes on a dull color. Stuff it into beef casings or large hog casings, divide it into links about a foot long and let it hang in a cool place 12 to 24 hours. Smoke with liquid smoke, as directed in other sausage recipes. When the second coat of smoke has dried thoroughly, cook the sausage in water at a temperature of 160 to 175 degrees Fahrenheit—which is far below the boiling point—for 30 minutes to one hour, according to the diameter of the links. Then plunge the sausage into cold water for about 30 minutes and hang it up in a cool place to keep.

Owing to the popularity of these sausages containing beef, it may pay you to buy this part of your supplies from a butcher, or one of your neighbors, if you are not prepared to slaughter beeves on your own place. For full instructions on beef slaughtering, see the section entitled "Beef and Beef Products."

There are two important points to remember in connection with sausage making. One is that sausage meat invariably should be allowed to "cure" 36 to 48 hours before being stuffed. Otherwise, it is very likely to spoil. Another is that the high temperature of the ordinary smoke house will ruin sausages if the smoking is prolonged. The heat renders out the fat and makes the casings brittle. The sausage as a result, is likely to be dry and hard. The best way to smoke any kind of meat or meat product is with liquid smoke.

### Pickled Pig's Feet

Clean the feet thoroughly and remove the toes. Soak them in cold water 12 hours or longer and boil them until they become soft. Salt them when partly done. About four hours' boiling will be required for average sized feet; five hours for large ones. Pack the cooked feet in a stone jar and cover them with hot, spiced vingear.

### Headcheese

Headcheese is supposed to be better when made from the head of the hog alone, but the odds and ends can be included without harming the product. The head must be shaved clean, the snout skinned and the nostrils cut off just in front of the eyes. The eyes and ear drums should be removed and the fattest part of the head cut away for lard.

Great care must be taken in soaking and rinsing the head to free it from all dirt.

Boil the head until the meat comes off the bones. The heart and tongue may also be included, if desired. Take out the meat and chop it fine, saving the liquor, which will be needed again. For every 25 pounds of meat use three-fourths pound of salt, one and one-half ounces of black pepper, one-half ounce of red pepper, two ounces of ground cloves and one gallon of the liquor in which the head was cooked. Mix these thoroughly with the firmly ground meat and stuff into large casings or thoroughly cleaned hogs' stomachs. If you use casings, boil them again, in the liquor in which the head was cooked, until they float. Place them in cold water about 15 minutes, drain and lay them away in a cool place. If the meat is not stuffed it should be packed in shallow vessels and kept cold until used.

### Scrapple

Both head and feet of hogs are generally used in making scrapple, but it can also be made from any other hog meat. Clean and dress the head and feet as directed in other recipes. Put them in a vessel with water enough to

*Fight winter ills*
ELECTRICALLY

FARMERS' WIVES throughout the territory served by the Pacific Gas and Electric Company are constantly called upon at this season to fight the winter ills of their families. Electric appliances can be of great assistance to them, and at the same time protect them from chill and other winter dangers to their own health.

Calls to a sickbed in the middle of a cold winter night can be made in comfort if there is a portable, electric heater to switch on and place conveniently near. Semi-medical, electrical equipment such as an electric warming pad, immersion liquid heater, and violet ray outfit also give great aid to Mothers who have winter ills to fight in their families.

*Call on a reliable dealer* in electrical appliances the next time you are near one, and ask to see these modern necessities.

*Electric Heating Pad.* It safely and successfully takes the place of a hot water bottle for all dry heat applications to the body.

*Electric Immersion Liquid Heater.* This little appliance will quickly heat liquids right in a glass or other small container.

*Violet Ray Outfit*

PACIFIC GAS AND ELECTRIC COMPANY

P • G • and E •

"PACIFIC SERVICE"

P-oc:11-27 E (Farm)

cover them and cook them till the meat separates from the bones. Drain off the broth, pick out the bones and chop the meat very fine. Then put it back into the broth and boil it, adding corn meal until the mixture is as thick as mush. Put the meal in slowly and stir vigorously to avoid lumps. When the mixture is smooth, boil it one hour and pour it into shallow pans or molds. When cold, it can be sliced and fried.

**Pickled Tongue**

Pickled tongues of hogs, beef and sheep bring fancy prices when properly cured and attractively packed. Clean them thoroughly by scraping, soaking and repeated rinsing. Put them into a brine made with salt and ham pickle mixed in the same proportions as directed for curing hams and bacon. Leave them in the brine two or three weeks, according to size. They may then be smoked with liquid smoke, as directed for other meats, or put into glass jars and covered with hot, spiced vinegar. The jars should be filled to the top and sealed perfectly.

**Smoked Tongue**

Smoked tongue is a great delicacy. After thoroughly curing the tongues as above they should be taken out of salt or brine, washed off and hung up to dry for a week or so. Then the tongue should be dipped in liquid smoke or the smoke applied with a brush.

**Liver Sausage or Pudding**

All the odds and ends left from cutting up a hog can be used in making liver sausage. If the head is used, it should be cleaned as previously directed. The liver, cut into slices, and the skin from which fat for lard has been trimmed should be cooked in a cloth sack, as they will become soft sooner than the other parts. A small amount of beef will improve the sausage, but is not necessary. Cook the meat till it falls from the bones, taking out the liver as soon as it becomes soft. When the meat is thoroughly cooked, grind it all together, using the finest grinding plate. For each 20 pounds of meat use three-fourths pounds of salt, one and one-half ounces of sweet marjoram, one-half ounce each of allspice and black pepper and half a gallon of the broth in which the meat was cooked. Onions may be added if desired. Work the meat and seasoning together thoroughly and stuff the sausage into beef casings or pack firmly in jars and seal with paraffin. If the sausage is stuffed into casings, it should be cooked again until it floats and then cooled thoroughly in cold water.

**Summer Sausage**

Although "summer" sausage can be made in cold weather only, it will keep the year around in a cool dry place. The recipe is:

Fifteen pounds of pork trimmings, 25 pounds well cured beef, 6 ounces white pepper, 1 ounce whole black pepper, 1 ounce whole mustard seed.

No salt is necessary, as the cured beef will make the sausage salty enough. Put the meat through the grinder, then add the spices. Mix until evenly seasoned. Spread it out in a cool place and leave it 36 hours or slightly longer. Then stuff it into hog casings and let it hang 12 to 24 hours. Smoke the sausage three times, a week apart, with liquid smoke, hang it up until thoroughly dry and it is ready for use. No harm will be done if the sausage becomes moldy. Simply wipe off the casings and the product is as good as ever How to prepare the cured beef needed in this recipe is explained in the "Beef and Beef Products" section of this book. The cured beef may also be purchased at a meat market.

### THE OLD TIME FOLKS

Give us more of the old time folks—the folks whose only style
Was kindly love in a human heart, and a face that spilled a smile;
Folks that found life simply sweet with the sunlight on the sod
And thought it wise and good and right to walk and talk with God.
Give us more of the old time folks—the folks who didn't shirk,
But gladly tackled each job that came, and found their joy in work;
Folks who wasted no time on jazz, and never ached for fame,
Just satisfied to live and love and play the human game.
Give us more of the old time folks—the folks who day by day
Were shaking hands with other folks on the same old stony way;
Folks who dreamed of better days—and made their dreams come true
By whacking out of the tough hard times a world for me and you.
The heart of the world is sore today, and its sky is dark and drab,
The lives of men are all worn out with hate and greed and grab.
Let's get back to the old time days, with the sunshine on the sod,
As old time folks went singing on because they trusted God.—Anon

### GRAPE CONSERVE

Four quarts grapes, 2 oranges (juice), 2 lemons, 1 cup chopped nut meats, sugar equal quantities as you have mixture. Wash fruit, remove grapes from stems. Remove skins from pulp. Cook pulp until soft. Strain to remove seeds. Place strained pulp and skins in the preserving kettle. Add orange and lemon juice.

### MIXED PICKLE

Two cups string beans, 2 cups wax beans 1 quart cucumbers, 1 quart onions, 1 tablespoon stick cinnamon, 1 tablespoon whole cloves, ½ tablespoon allspice, ½ tablespoon mace, ½ teaspoon celery seed, 1½ quarts vinegar, 2 cups sugar, 1 tablespoon mustard seed. Cook vinegar with spices and sugar, then remove spices. Cook vegetables in vinegar three minutes. Put in jars and seal.

### EGGLESS, MILKLESS AND BUTTERLESS CAKE

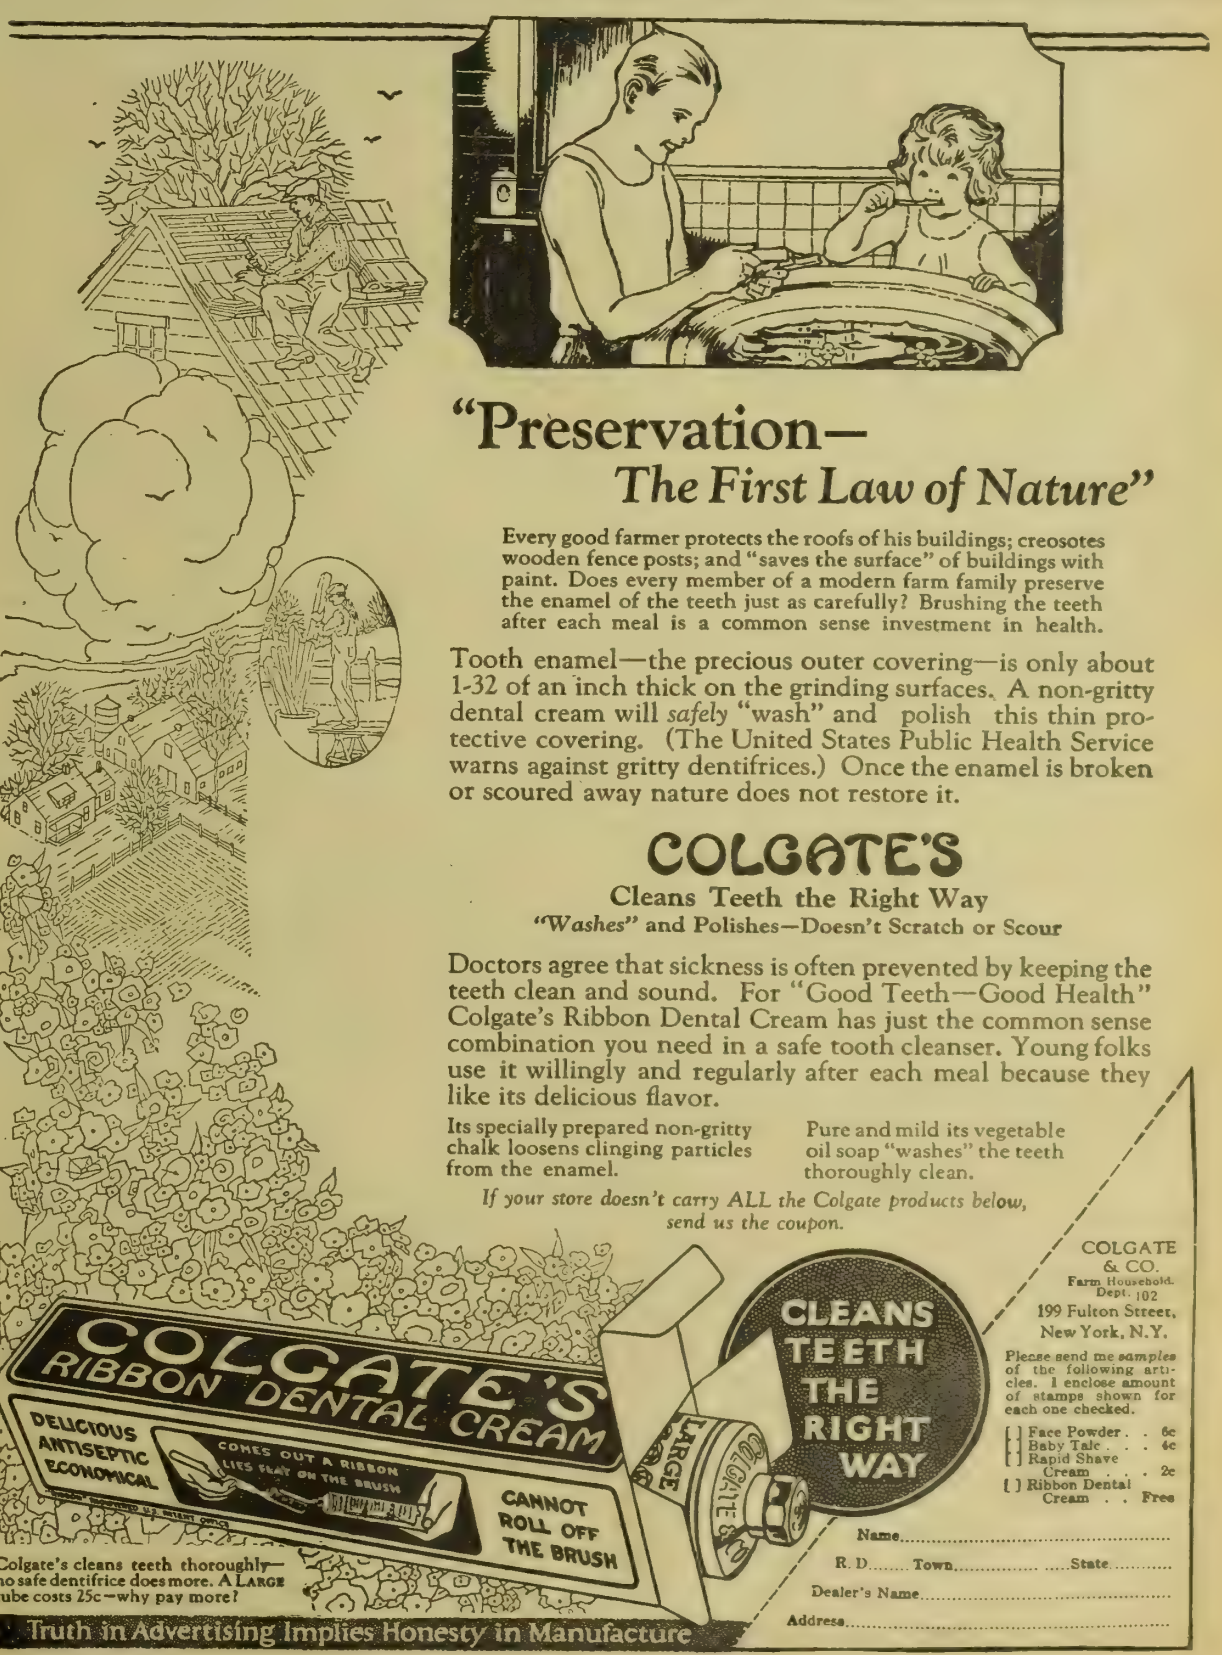
One cup brown sugar, one-third cup lard, 1 teaspoon cloves, 1¼ cups water, 1 teaspoon cinnamon, ¼ teaspoon nutmeg, salt. Boil 5 minutes. Add 1 teaspoon soda and 1 teaspoon baking powder to 2 cups flour. Add to cooked mixture. Bake 30 to 40 minutes.

To give a nice polish to the top of the range, rub with a cloth dipped in melted paraffin to which has been added a few drops of kerosene. Polish with a soft, dry cloth.

A suggestion for saving hems of sheets and tablecloths: Always hang on line from corners doubled back and the wind and strain will not wear them out.

In this country about the only retired business man we have is the one who has gone to bed and is dreaming about what he has to do in the morning.—Cleveland Commercial.

Nothing great was ever accomplished without enthusiasm.—Emerson.



"Preservation—
*The First Law of Nature*"

Every good farmer protects the roofs of his buildings; creosotes wooden fence posts; and "saves the surface" of buildings with paint. Does every member of a modern farm family preserve the enamel of the teeth just as carefully? Brushing the teeth after each meal is a common sense investment in health.

Tooth enamel—the precious outer covering—is only about 1-32 of an inch thick on the grinding surfaces. A non-gritty dental cream will *safely* "wash" and polish this thin protective covering. (The United States Public Health Service warns against gritty dentifrices.) Once the enamel is broken or scoured away nature does not restore it.

COLGATE'S
Cleans Teeth the Right Way
*"Washes"* and Polishes—Doesn't Scratch or Scour

Doctors agree that sickness is often prevented by keeping the teeth clean and sound. For "Good Teeth—Good Health" Colgate's Ribbon Dental Cream has just the common sense combination you need in a safe tooth cleanser. Young folks use it willingly and regularly after each meal because they like its delicious flavor.

Its specially prepared non-gritty chalk loosens clinging particles from the enamel.

Pure and mild its vegetable oil soap "washes" the teeth thoroughly clean.

*If your store doesn't carry ALL the Colgate products below, send us the coupon.*

Colgate's cleans teeth thoroughly—no safe dentifrice does more. A LARGE tube costs 25c—why pay more?

HIGH CLASS
Reduction Sale

60 REGISTERED HOLSTEINS

F. L. HOGUE
Modesto, Calif.

Tuesday, Dec. 5
At 10 A.M.

In order to reduce the size of his rapidly increasing herd of registered Holsteins, F. L. Hogue will sell at public auction upwards of 60 choice females.

This sale will positively contain every cow of milking age in the herd, that is in desirable sale condition.

Every animal in this sale has passed three consecutive tuberculin tests, and sells subject to retest by the buyer.

Write for catalog or other information about this choice offering to the sale management.

# Dairy Industry Facilities Increase

The dedication of the dairy building at the university farm, Davis, has greatly increased the enthusiasm of dairymen in the work of the college of agriculture. The meeting was not only largely attended but a thorough going inspection was made of the various class rooms, laboratories, and practical working rooms of the new building. The Cultivator camera was brought into action and gives herewith photograph of one of the recitation rooms.

In describing the building and some of the equipment Prof. C. L. Roadhouse gave a bit of the history of the effort to secure the building and its equipment. In 1917 a bill was introduced by Senator Rush in which provision was made for an appropriation of $50,000. Soon after war was declared with Germany and it was decided unwise to undertake the construction, and nothing definite was accomplished until the last legislature passed a bill introduced by Senator Duncan appropriating $400,500 for construction of buildings and equipping them for the better work of the college. Of this $225,000 was used to cover the dairy building and equipment. Of this building Prof. Roadhouse said in his address:

"Modern sanitary construction is provided in all manufacturing laboratories with well drained tile floors, tile wainscoting, skylights and ventilating flues through the ceiling. The first floor of the main building will include laboratories for butter and market milk, commercial testing, student testing, farm dairy and bacteriology; a salesroom, office and student locker rooms. The second floor will be occupied by three lecture rooms. Director Hutchinson's office, reading and dairy products judging rooms and office and storage space. The manufacturing wing will house the large creamery laboratory which will be used for teaching advanced students and those electing practice work in butter, cheese, ice cream, market milk and milk condensing. There will be also a milk receiving department, a student cheese laboratory, refrigerating, ice making, storage and machinery rooms. A distinctive feature of the new building is the provision for several small units of equipment in each department, making it possible for each student to work independently. The increased equipment will make it possible also for instructors to teach larger sections which will accommodate a larger number of students."

A Recitation Room in the New Dairy Building at Davis

Prof. Roadhouse ends with: "The dairy industry of this country is in need of well trained men. The best source of them is found in the dairy departments of the various state agricultural colleges. The University of California now adds further support to the agriculture of the state by increasing the facilities for dairy teaching."

# Hartsook's Draft Sale Goes Well

Everyone who is interested in Holsteins in California or most anywhere else has heard of Fred Hartsook and the wonderful herd of Holsteins he has assembled in the past few years. Some of these people were present at his ranch on the 10th to take advantage of his experience in selection of dairy cows when he offered the first animals he has sold at public sale. Others probably had the old idea that when a man with a big herd sells part of them that he is culling the herd. This is sometimes done but it was not so in this sale, every animal offered was a good one and as sound as a dollar with t. b. certificate to go with her. True enough, Mr. Hartsook did not offer for sale any of his 40 pound cows nor any of his grand champions. He offered a good selection of milking cows and heifers, many of which could have been retained in his herd without being out of place. The majority of these had been bred to his great bull, Sir Aaggie De Kol Mead, but quite a number were bred so recently that the buyers could not be sure that they were in calf. They were given the opportunity of returning them to be bred or leaving them until they were safely settled, but oftentimes people would rather pass a good animal up than to be bothered with carting her around. A number of new buyers showed up and reaped a harvest in picking up good ones at a cheap price. With two exceptions the breeders did not open their mouths to assist the man who has paid them higher prices than anyone in the state. Probably the offering did not appeal to them but a little reciprocity at times goes a long way to boost business.

The 47 head sold for $14,780, or an average of $315 each. Considering that many of them were young heifers the price was very good. Two cows sold for $550 each and these topped the sale. The real top was a heifer due to freshen soon which was sold to Carl McCullers of Santa Maria for $525. This was a sweet youngster sired by Hartsook's former herd bull, Hazelwood Finderne Fayne, and out of a 24 pound cow. Mr. McCullers added eight head to his good herd which he is establishing near Santa Maria.

A. M. Dunn, proprietor of the Wayside Press in Los Angeles, stepped out and bought 16 heifers for the place he is establishing at Roscoe in the San Fernando Valley. The top of his purchase was Nancy Calamo Korndyke 2d, the calf which was first at the San Joaquin County fair and which was always in the money at eight shows. She cost him $475 and was worth it.

The San Diego County Farm, represented by Dr. Charles L. Good, supervisor in charge, and C. D. Church, manager, bought five head of good ones at the head of which was Parthenia Champion, a 24 pound senior four year old record cow. She cost them $550. The San Diego County Farm has an exceptional bull in Salambo Pontiac De Kol who heads the herd, and his grade daughters have proven to be

great producers, milking more with their first calves than their dams do as full aged cows. The men in charge have decided that he should be used on some good cows, and this will help to make a foundation herd.

Mrs. Perle Penrose of Pomona and Charles W. Anderson of Burbank picked up some excellent cows at bargains. There were few good ones in the ring without these two bidding on them.

Taking it all in all it was a good sale, but the average could have been $100 an animal higher, and still they would have been bargains, considering their breeding and the bull they are bred to.

The sale was in charge of Charles L. Hughes of the California Breeders Sales and Pedigree Company of Sacramento, and Rhoades and Rhoades of Los Angeles were the auctioneers.

# Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

**Slobbering**

I have a mare that about two years ago had an abcess form at the root of her tongue from barley beards and it broke out under her throat. I fed her bran and alfalfa until nearly healed then put her on green pasture until it healed completely. At the time of the abcess she slobbered badly. I had a veterinarian fix her teeth as he said that was the trouble. When she came from pasture she seemed all right but in a few weeks began slobbering again and I had another veterinarian fix her teeth, which was about a year ago. Now she is worse than ever. Have the barley beards permanently injured her or shall I have her teeth treated again? Have fed only oat hay since her trouble.—Subscriber, Carlsbad.

Slobbering is caused by indigestion or by eating certain kinds of feed or by irregular teeth. First we would advise reducing the feed by giving a small amount in the morning and at noon and a fair amount at night. Give a teaspoon of baking soda in the feed at night. The teeth should be in proper condition but it is a fact that only a few veterinarians are good dentists. We would advise having the teeth properly cared for but can not advise who to get to do it.

**Sow Ailing**

My Duroc-Jersey sow has a large lump on the front part of her stomach and there is an opening in the center of it from which a thick rotten flesh runs slowly. The lump has been there since August. Can it be a cancer? Is it safe to let her run with other sows? —Subscriber, Chowchilla.

She may have a splinter in it that broke off. Split it open and examine it. Scrape out all you can and wet the cavity twice a day with a solution of permanganate of potash, using two drams of it to the pint of water.

**Pig Swelling**

I have several sows that have had pigs within the last four weeks. One pig began to swell a little when about two weeks old. I watched him and found that the swelling increased slowly. He was active like the rest of them but would often stand in one place for a time. At first a little water ran from the eyes but that soon stopped. The rest of the pigs seem to be all right. After two weeks I killed him as he seemed to be in some misery. The bowels contained a substance like half digested alfalfa, and had a great deal of air in them. In the stomach I found air and a substance about the color and appearance of a hard boiled egg. Would appreciate any information on the subject.—Subscriber, Bakersfield.

There may have been an obstruction in the bowel, way back. The writer has seen such cases and found that the cause was a closed bowel that had been so from birth. It is hard to understand how they can live, but they will for several weeks and seem to enjoy very good health and grow almost as fast as the others.

**Wire Cut**

Have a horse with a bad wire cut above the knee. It has healed but left a swelling and the knee is stiff. I walk him every day. What will reduce the swelling?—Subscriber, Chowchilla.

Grease it with bacon fat. That will soften it and reduce the swelling in time. Those cases do not yield quickly to treatment. Keep on exercising him.

**Gorged with Milo**

I have a cow that was fresh in June. She gave ten quarts of milk until the last of July when she broke into a field of milo and sugar cane. I watched her

# Honey in San Diego

By Robert R. McLean, Horticultural Commissioner, San Diego County

THE present season marks one of the best honey flows, if indeed not the very heaviest, ever experienced by San Diego County apiarists. Our normal average of extracted honey in other years has been about three-quarters of a case per hive, and in some of the bettter located apiaries perhaps a case to the hive, but this year many commercial beekeepers have extracted from one case up to two or even three cases per hive, spring count.

Display of San Diego County Beekeepers Association at County Fair

This splendid yield is directly due to two factors. First, the heavy and continued rains of the past winter brought out an unprecedented bloom on such honey plants as the sages, deerweed or wild alfalfa, wild buckwheat, mountain lilacs and countless others that produce honey in varying degrees of quality, flavor and body. The white and black sages in particular, from which our lightest colored and most delicately flavored honey comes, have bloomed more profusely than for many years, resulting in a very large proportional flow of the lighter grades of honey. Second, constant supervision of the apiaries by the county authorities and intelligent handling by the beekeepers themselves have resulted in the diseases being reduced to a minimum, thereby putting the apiaries, so far as disease is concerned, in the very best possible condition to take advantage of the honey flow.

San Diego County has always been a leader in honey production, for a number of years holding the record as the heaviest producer in the state. The first carload of honey ever sent east from California came from this county, being shipped by the pioneer apiarist, John S. Harbison, some time subsequent to 1869. The industry has grown steadily until at the present time there are 825 registered beekeepers here, controlling some 40,000 hives, not all of which are in commercial apiaries, however.

Last year's honey production in the county amounted to some 700 tons, or about one-sixth of the total output of the state. This year prominent beekeepers estimate a San Diego County yield of nearly 80 carloads of 20 tons each, or approximately 3,000,000 pounds, the larger portion of which consists of light, extra light, white and water white grades. If the state production this year goes to 12,000,000 pounds, a gain of 2,000,000 pounds over last year, San Diego County will have produced one-fourth of the entire amount, probably a larger yield than that of any other county.

The exceptional rains of the past winter undoubtedly benefited all sections of the state, but the honey plants in San Diego County's vast mountain region certainly received more direct benefit than those in other districts where the normal rainfall is heavier.

Largely because of the interest a very heavy honey flow naturally stimulates, a remarkable exhibit of bees, honey, honey products and appliances was put on at the San Diego County farm bureau fair, excelling anything of the kind attempted here before.

It is unfortunate that the present price of honey is only the approximate cost of production. Many apiarists are holding their honey in the hope that the recent tariff laws will benefit them by discouraging importations from foreign countries. The money value of the honey produced in this county is considerable and much credit is due the men who have persistend in the industry in spite of adverse conditions.

# Applying for Delhi Lands

The farms and farm laborers' allotments of the fourth and last unit of the Delhi state land settlement are now open for the inspection of all who desire a home in that colony. Until November 30, intending settlers can make filings on equal terms. Applications will not be considered until the end of the month. On November 30 all the applications will be dealt with by a board. Where there are several applicants for a single farm the board will decide after a hearing who is to obtain it. There are in all 105 farms and eight farm laborers' allotments. Some of these adjoin or are near the Ballico station on the Santa Fe railway and the others are near the Delhi station on the Southern Pacific.

Applicants are already visiting the farms and looking over the development of the older part of the settlement. There are now about 240 settlers at Delhi, and this gives those looking for farms a chance to see the working of the state land settlement policy and learn what can be done with this land.

In order to save time and money for applicants, Dr. Elwood Mead, chief of the land settlement division, whose headquarters are at Berkeley, intends to spend the greater part of November in Delhi. In this way he can deal directly with applicants.

Since notice of the opening of this land to settlement was sent out letters of inquiry and applications for farms have come in from widely separated sections of the United States. The land settlement division hopes that most of the settlers will be Californians. It believes that this opportunity for young men and women of this state to get a farm of their own under conditions that require no more capital or practically any larger payments than they would have to pay as renters, should go mainly to people of the state. There is a selfish reason also in hoping that most of the settlers will be from California because they have a knowledge of California agriculture and need less advice and direction.

### YEARBOOK 1921

The United States department of agriculture Yearbook for 1921 is being mailed to constituents of senators and representatives and the few copies available from the department are being supplied to correspondents and collaborators. As was the case with the volume for 1920, the volume for 1921 is bound in buff cloth instead of the old familiar dark blue or black.

As to contents the first part of the book is given up to the report of Secretary Wallace, the remainder to "A Graphic Summary of American Agriculture" based largely on the census of 1920. With it, however, are the usual statistical tables giving productions for 1921 and three or more preceding years. The make-up of the book is materially different from that of its predecessors. Instead of the discussion of cultural practices or descriptive articles similar to those which might be used in agricultural magazines there is an extended discussion of the marketing problems affecting four of our principal crops. However, we will allow Secretary Wallace to make his own statement. Here is from the foreword:

"The Yearbook for 1921 is a departure from previous Yearbooks. It represents an effort to present in a somewhat detailed way the economic situation with respect to four of our principal agricultural products—wheat, corn, beef, and cotton. The subject is treated in four separate chapters. These discussions take the place of the briefer, less comprehensive articles, chiefly on production subjects, presented in previous Yearbooks. A graphic summary of the agricultural census of 1920 is added, and the statistical section has been strengthened by the inclusion of cost of production data and by some new statistics of marketing and production.

"The Yearbook for 1921, therefore, emphasizes the economic side of our agriculture, because help in their economic problems is now the most urgent need of our farmers. That is not to say that the department of agriculture is losing sight of production matters. The farmer needs all the help in his production problems that the department and the agricultural colleges and experiment stations can give him, but the thing of most importance now is the development of an entirely new realm of organized knowledge bearing upon the economic factors of agriculture, looking toward cheaper production, improved methods of distribution, and the enlargement of markets, all to the end that prices the farmer receives shall be more fairly related to his cost of production."

Succeeding volumes will take up other products.

In a personal letter Secretary Wallace says: "The four articles have been prepared with a great deal of care and through the cooperation of various bureaus in the department. What we have tried to do is to give a correct picture of these four major activities. It is planned to pursue this policy with the next three Yearbooks. The one for 1922 is already well under way. We hope to have most of it ready for the printer in January and hope to have the complete book ready for delivery in the late winter or early spring. The delay this year was unavoidable because of the change in plans."

### AMERICAN FEDERATION OF FARM BUREAUS

The Sherman Hotel in Chicago will be headquarters for the fourth annual convention of the American Farm Bureau Federation, December 11-14. Arrangements have been completed for taking care of the delegates and housing the convention. A block of 200 rooms has been reserved for the delegates. Those who want reservations should write at once to A. R. Simpson, American Farm Bureau Federation, 58 East Washington Street, Chicago.

Reduced rates on all railroads leading into Chicago have been secured. Delegates may make the round trip from any point in the United States at the rate of a fare and a half. The rates are made available by the certificate plan used last year. Purchasing dates have been set far enough ahead to permit arrival in Chicago in time to attend a part of the International Live Stock Exposition.

Purchasing dates are from December 5 to 11, inclusive. Tickets from distant points may be purchased on the 4 to 10, inclusive. December 18 will be the last day on which tickets may be validated at the reduced rate for the return trip.

In buying tickets, buy a regular one way traffic fare for the going trip. When purchasing same, ask for a certificate. Do not make the mistake of asking for a receipt.

### UNIVERSAL DEMAND FOR FEDERAL POTATO GRADES

More than 75 per cent of the buyers of potatoes in carlots are demanding that shippers do business on the basis of United States grades, a survey among field representatives of the United States department of agriculture shows. "It is almost impossible for us to sell any potatoes except strictly United States No. 1," a leading buyer declared. "Buyers also insist that each bag be tagged United States No. 1. They like branded bags and we believe they are a big help in getting repeat orders. If a customer gets some nice potatoes under a certain brand, he will want more of them."

Another buyer said: "We believe that it is more essential this year than ever before to have potatoes put up strictly No. 1. Should a car arrive on which government inspection shows 10 per cent off-grade, the buyers simply deduct 10 per cent from their invoice, paying only for the number one stock, and nothing for those under grade. You can readily see what a loss it would mean, having prepaid freight charges on a waste of 10 per cent of the potatoes in a bag."

The October crop report forecasts the potato crop at 433,015,000 bushels. While this is a drop of a little over 5,000,000 bushels from the September estimate, larger per capita production than consumption is indicated, and the department of agriculture is continuing to urge growers and shippers to grade their potatoes strictly according to United States No. 1 specifications. Only in this way can producers hope to move such a large crop at a profit.

### TRANSPORTATION PROBLEMS BEFORE FRUIT GROWERS AND FARMERS

The California Fruit Growers and Farmers Convention will be held at Sacramento, December 12-14 instead of November 21-23 as first announced. It is hoped to secure representation from the interstate commerce commission for the opening session will be devoted primarily to transportation questions, setting forth the problems which have been met during the past two years and the needs for 1923. At this meeting will also appear representatives from 11 western states.

The interstate commerce commission, after considerable persuasion granted California fruit men priority rights on refrigerator cars during the peak of the shipping season, and while this materially helped the situation it was by no means a solution of the problem. With our increasing crops we can use several thousand more cars. Possible solutions of this problem will be pointed out at the December meeting.

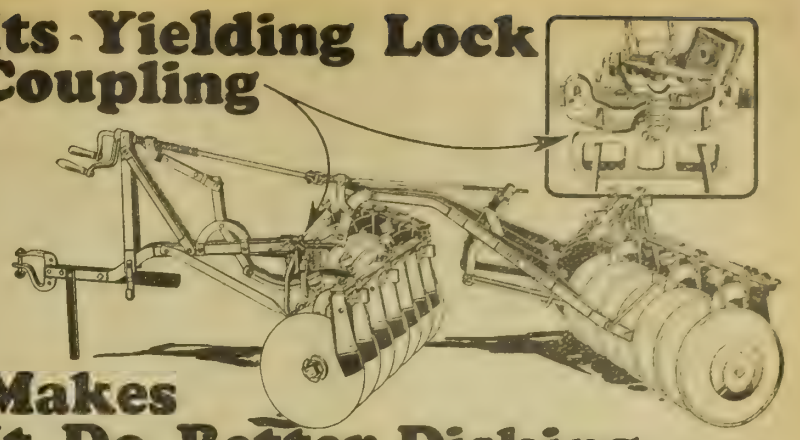
Book Review

### THE HOME GARDEN

The Home Garden by L. C. Johnson, published by author, Pomona, at 25 cents.

This booklet has 48 pages illustrated with several halftones, and touches upon all phases of gardening as carried on in Southern California. In the preface the writer says: "It is my endeavor to point out to the reader the best and most practical way of doing things right and how to avoid mistakes. A successful gardener must be more than a cog in a wheel and just revolve as the wheel goes round. He must be endowed with initiative and reasoning faculty, and if he has these qualifications this book will teach him how to use them.

Its Yielding Lock Coupling



Makes It Do Better Disking.

JOHN DEERE

Model "L" Tractor Disc Harrow

WITH YIELDING LOCK

The rear discs of the John Deere Model "L" penetrate, pulverize and pack better than on any other harrow because the yielding lock coupling forces them always to cut down the ridges left by the front discs. This is an *exclusive John Deere feature.* It locks the rear section in proper position when traveling straight ahead. When turning, this lock yields—there is no skidding of harrow around corners. The front discs penetrate, pulverize and pack the soil better because of the independent gangs and pivoted yoke which hold the discs down to their job when harrow is passing over obstructions.

The entire harrow is flexible—front and rear sections work independent of each other and adjust themselves to uneven ground surfaces. Two convenient cranks, controlled from the tractor, for angling either or both sections without stopping or backing the harrow.

Ask your John Deere dealer about the *exclusive* aligning device on the Model "L"—another John Deere feature; adjustable hitch; adjustable scrapers; convenient grease cups and slotted gang couplings.

**FREE BOOKLET:** Write today, address John Deere, Moline, Ill., and ask for free booklet describing the John Deere Model "L" Tractor Disc Harrow with yielding lock. Ask for Booklet DL86

## HOGS

**Tamworths, The Bacon Breed.** James J. Summerfield. Santa Rosa.

## STORRS EGG LAYING CONTEST

Storrs, Connecticut, October 31, 1922. —Final report for the year.

Hollywood Farm's pen of White Leghorns from Hollywood, Washington, won the eleventh annual egg laying contest conducted by the Connecticut agricultural college at Storrs. The final score of the pennant pen was 2,215 eggs, or an average of more than 221 eggs for each pullet in the pen. Unlike the winners in some contests this pen lagged behind for a large part of the year, but steady laying in the fall months and a strong spurt during the last three weeks put this pen under the wire a winner by 48 eggs. Hollywood Farm finished in second place a year ago and in fourth place two years ago. During the last three years their three pens, consisting of 30 birds, have laid 6,552 eggs, or an average of 218 eggs per hen, an enviable record for consistently good laying. Leghorns have not won the contest since back in 1914 when Francis F. Lincoln of Mt. Carmel, Connecticut, sent in ten pullets that proved to be the best layers in the country. The following list shows the winning breeds at Storrs during the last ten years.

| Year | Breed | Score |
|---|---|---|
| 1913 | White Leghorns (only 5 birds | 1190 |
| 1914 | White Leghorns | 2088 |
| 1915 | White Wyandottes | 2072 |
| 1916 | White Wyandottes | 2265 |
| 1917 | Barred Rocks | 2119 |
| 1918 | Oregons | 2352 |
| 1919 | Barred Rocks | 2022 |
| 1920 | Barred Rocks | 2234 |
| 1921 | White Wyandottes | 2234 |
| 1922 | White Leghorns | 2215 |

There was a total of 1000 hens entered in the contest. They came from 14 states, England and one province in Canada. The laid a grand total of 162,857 eggs, the second highest annual lay in 11 years. The following table shows the number of birds in each of the principal classes, the average individual egg yield for the year, and the general average for all varieties that took part in the contest.

| | |
|---|---|
| 100 White Wyandottes | 168.4 |
| 400 White Leghorns | 165.6 |
| 260 Plymouth Rocks | 162.0 |
| 240 Rhode Island Reds | 156.8 |
| 1000 Average all breeds | 162.9 |

Barred Rock Hen No. 28 owned by the agricultural college at Guelph, Ontario was the outstanding individual in the contest. Her production of 301 eggs in the 52 weeks makes her the second best hen ever trap-nested at Storrs and during the last ten years over 10,000 hens from Canada, England and 30 different states have tried to reach this pinnacle of hen fame. The second best hen in the contest was White Wyandotte No. 264 from Tottington, England, with a mark of 277 eggs. In the White Leghorn group hen No. 672 in the winning pen was high with a score of 276 eggs. In the Rhode Island Red class hen No. 599 from Southboro, Massachusetts, was at the top with 250 eggs. The best Connecticut hen was White Wyandotte No. 328 from Woodbridge with a record of 265 eggs.

### Pen Records for the Year

Hollywood Farm, White Leghorns, 2215; Frank P. Matteson, White Wyandottes, 2167; Harry G. Culver, Barred Rocks, 2124; W. H. B. Kent, Barred Rocks, 2043; Woodbridge Orchards, White Wyandottes, 2037; Walter Bradbury, White Wyandottes, 2008; Ontario Agricultural College, Barred Rocks, 1983; H. E. Dennison, Barred Rocks, 1959; George B. Ferris, White Leghorns, 1953; The Orchards, Rhode Island Reds, 1940; Rapp's Leghorn Farm, White Leghorns, 1937; Andrew D. Ohr, White Leghorns, 1935; Goshen Poultry Club, White Leghorns, 1933; Michigan Poultry Farm, Barred Rocks, 1927; Beck Egg Farm, White Leghorns, 1903; Merritt M. Clark, Barred Rocks, 1879; Meadowedge Farm, White Leghorns, 1869; Small's Poultry Farm, White Leghorns, 1850; Charles D. Pierce, Rhode Island Reds, 1849; Purdue University, Barred Rocks, 1836.

## DAIRY CATTLE SALES AT L. A. UNION STOCKYARDS

One of the features of the new Los Angeles Union Stockyards will be the facilities for dairy cattle sales. A separate pavilion and pens are being erected and every effort is being put forward to make this division of the yards a big feature.

The opening sale will be of 35 head of top dairy cows from Wisconsin which are being consigned to the Simon Livestock Commission who will specialize in this class of business.

Most of these are high grade Holsteins but there are five registered Holsteins and three registered Ayrshires in the shipment. Most of these cows are from accredited herds and all are federal tested and carry federal certificates of t. b. test. They will also be subject to a retest on the sales grounds. The first sale will be held on November 22, 1922, with Rhoades and Rhoades as the auctioneers.

W. G. Simon, head of the commission firm handling the cows, is an old time Chicago man who has been located here for the past two years in which time he has imported over 70 cars of cows from the Middle West.

## NEMATODE EEL WORM

The nematode specialist of the United State department of agriculture, W. A. Orton, has warned Californians that we will always have nematodes with us and should direct control measures along cumulative lines. The most promising lines of work will be the breeding of nematode resistant varieties, especially on all kinds of truck crops; for therein lie our greatest monetary losses.

# A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1217 Coca Cola Bldg., Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

# Baby Chicks

**With Laying Strain That Live and Thrive**

Hatched with our new mammoth, forced draft incubators, from pure bred, farm raised, Hegamized stock. This insures you a large fluffy chick, full of pep and grows from the very start.

We are now booking orders for 1923 delivery. Write today for our price list and reserve your delivery date. We guarantee 100% delivery anywhere within 72 hours from Long Beach. We hatch nothing but S. C. White Leghorns and S. C. R. I. Reds.

BERK'S HI-GRADE HATCHERY

# MORE EGGS NOW AT 60c A DOZEN

Many Poultry Raisers Doubling Daily Egg Production Without Extra Expense

Eggs are scarce and prices steadily going higher. Every poultry raiser can greatly increase and maintain the daily egg production of the entire flock during the fall and winter by using Imperial Egg Tonic.

All that is necessary is to occasionally drop a few of these highly concentrated tablets in the fowls' drinking water. This standard, time-tested remedy acts as a splendid tonic and blood purifier, stimulating the egg production qualities. Starts hens and pullets laying faster than ever. Every day you put off using Imperial Egg Tonic you are delaying big egg production. Start now to get your share of these high prices

## YOU CAN GET YOURS FREE

Send no money. Just your name and address to Imperial Laboratories, Dept. 5100, Kansas City, Mo., and they will send you by return mail, two regular $1.00 size packages of Imperial Egg Tonic (double strength). Pay the postman only $1.00 and a few cents' postage when they arrive. Enough for yourself and neighbor.

NOTE — California Cultivator readers risk no money in accepting the above special introductory offer. Imperial Laboratories are fully responsible, and will refund your $1.00 on request any time within 30 days, if you are not entirely satisfied.

# MOE'S DOUBLE WALL INSULATED FOUNTAIN

A new high grade fountain, with thick insulated walls. Fresh water at the right temperature makes a healthy flock, and increases the egg yield.

2 Gal. $4.00, 3 Gal. $4.60, 5 Gal. $5.90

Ask your dealer and write for catalogue of Moe's big line of Poultry Yard Fixtures.

**Hoeft & Company, Inc.**

# Poultry Queries

Conducted by Jean A. Koethen

### Bronchitis

I want to thank you for the help and encouragement you have given me. This is my first year in raising turkeys. I have only 27 but I watch eagerly each week for what you have to say about them. I tried Mrs. H. W. Monroe's treatment for blackhead and it worked like a charm. One of my turkeys makes a noise when breathing. Sometimes he makes a clucking noise as if he were trying to clear his throat and at times wheezes as if he had asthma. I have been giving olive oil with red pepper in it.—Subscriber, Brawley.

Your turkey evidently has bronchitis, for which there is no better cure than olive oil given in doses of 1 to 2 tablespoons twice a day. A one grain capsule given at night sometimes has a beneficial effect, but the best cure is prevention, which means keeping him in a comfortable, dry place and feeding plenty of green. Thanks for your kind words about this column.

### Whole Corn

Is it a good plan to feed whole corn with milo for fattening turkeys?—Subscriber, Brawley.

Whole corn is the best of fattening feeds. Most turkey breeders begin in October by adding cracked corn to the ration of rolled barley which the birds have had during the summer. After the birds become accustomed to cracked corn it is gradually changed to whole corn and the proportion of barley diminished, though it is safer to feed some barley till a week or so befor the birds are to be marketed. Some breeders keep both whole corn and rolled barley before them the last month.

### Amputating Wing Joint

My turkeys must not fly on account of high voltage wires. Can the last joint of the wing of a young turkey be amputated as successfully as that of a chicken? Clipping wings is a great nuisance.—Subscriber, Caruthers.

I have never heard of amputating the wing joint in young turkeys and should not dare advise it. If any reader of the Cultivator has tried this method of controlling turkeys won't they please tell us about it. So many people nowadays are keeping their turkeys closely confined that this would seem to be the way out. If yards are kept clean and plenty of green feed given the turkeys do very well and their owners are saved a great deal of anxiety. Keeping the birds on range is easier in many ways, but where range is not available keeping them in small, covered yards does very well.

### Poultry Adviser

Can you give me the name of some experienced poultryman who makes a business of advising beginners? My hens are not doing well and I cannot afford to experiment.—Subscriber, Ontario.

The county farm adviser is paid for this very thing and will no doubt be glad to look in on you if you ask him. Then you are very fortunate in having close by one of the most active and progressive poultry associations in the state, that at Pomona. A postal card addressed to Cornele G. Ross, Pomona, who is also president of the Poultry Producers of Southern California, will no doubt bring you information as to when and where the association meets. Like the farm adviser, it exists for this very purpose. The poultry division of the University of California also has an extension poultryman who, when he is in this part of the state, is at the service of any poultryman who needs him. A postal card addressed to Poultry Division, College of Agriculture, Berkeley, would put you in touch with him.

### Ventilation

My new poultry house is 20 feet long, 10 feet wide and about 10 feet high and faces west. How many hens will it house, and why are my hens taking cold in it? We find your paper very interesting and instructive.—Subscriber, Middletown.

From 2 to 4 square feet of floor space per hen is allowed according to amount of outside yard space, that is, you can keep more hens in a house if the birds have yards than if they are confined to the house. Many poultrymen allow only 2 feet per hen when they have yards, but this allowance is small. Three square feet is bettter. You ought to be able to house 75 hens comfortably if they have outside runs. You do not say what provision your have made for ventilation. If the front is open (except for nests and hoppers) and you have doors at the ends which will give circulation of air when it is needed your hens should be pretty well supplied with air. Many houses, in addition to open front and doors, also have a window under the roosts for use in very warm weather. The main trouble with your house seems to be its width and height. It is too high and too narrow. There is too much air space above the heads of your birds and not enough opportunity for air circulation in front of the roosts. It also fronts in the wrong direction. The best type of house is from 14 to 20 feet wide, so that the roosts will not fill more than half its width, and not over 7 feet high at its highest point. and fronts south or east, so that prevailing winds are always behind it. I am afraid you will always have colds in that house.

### Air Puff

What makes my chickens swell up, their wings stick out and their feathers stick out? When the skin is punctured the wind escapes and they die in a short time.—Subscriber, Orange.

The swelling comes from a wound or abrasion of the lung tissue and is due to violence of some kind. Little chicks that have been trampled on by their mothers and young roosters that have been fighting often develop this trouble. All you can do is to keep them in a comfortable place and give a nourishing diet, including milk, if possible, and plenty of green feed. Puncture the skin if the swelling is large.

### Nits

Enclosed find sample of feathers from one of my chickens. What is it on the lower ends of the feathers?—Subscriber, Perris.

These are the nits of lice. You will have to dust well two or three times to get rid of them. The first time you will kill the lice that are on the bird. A week later dust again to get the lice that have hatched from the nits. A week later dust again to get what lice are left. Sodium flouride has proved to be a satisfactory louse powder and may be had from any supply house.

### Scaly Leg

What can I do for a scale that has come on a few of my fowls legs? They seem healthy otherwise.—Subscriber, Berkeley.

Your hens have what is known as scaly leg. It is passed from bird to bird by contagion but has its origin in filthy yards and houses. Treatment consists in dipping the legs and feet in a half and half mixture of kerosene and linseed oil or anointing with lard into which an equal quantity of sulphur has been mixed, or soaking well and rubbing with balsam of Peru. Never take a bird with this disease into your flock, for it spreads with surprising rapidity.

# Don't Hatch Weak and Wobbly Chicks

**With Cheap Incubators**

A cheap uncertain incubator means death to chickens and profits. Remember it is not how many you hatch that counts, but how many you raise.

# Queen Incubators

**Hatch Strong, Healthy Chicks That Live and Grow**

One of our Minnesota dealers writes: "We have sold Queen Incubators and Brooders for the last six years and they have given our customers entire satisfaction. The farmers all consider the Queen Incubator as standard and at auction sales, where it is almost impossible to get a bid of any kind on the average second hand incubator, the Queen always brings a good price, regardless of its outside appearance."
A Queen costs but little more than the cheap machine and the extra chicks that live and grow soon pay the difference. Write for Free Book.

# Poultrymen's Guide

The value of chickens and eggs produced in California (1919 census) was $34,727,935.00. There is poultry on 92,409 farms in the state—78.5 of all farms. January 1, 1920, poultry of all kinds on farms in California numbered 10,811,183, a gain of 4.723,916 since 1910, indicating the rapid and important development of the industry. At the present prices of eggs, hens and baby chicks and the big demand upon hatcheries for more stock it is wise to order early. The representative advertisers whose announcements appear below are recommended to prospective purchasers.

### LIVESTOCK

Weekly livestock market summary, Tuesday, November 14, 1922. (Furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles:

Cattle: Plentiful supply at Union Stockyards latter part last week and opening days this week. Good proportion fat steers, mostly from Wyoming, Utah and Idaho. Arizona and Texas had stock here, as well as California. Local packers fairly supplied, movement slow, price tendency downward.

Top of 8.25 was scored Monday on two loads strictly good Idaho steers, averaging around 1100 pounds. String of 195 good Wyoming steers, averaging 1083 pounds, went at 7.80, and 77 Wyoming bullocks, averaging 947 pounds, went at 7.30 with four other loads at 7.25. Shipment of 28 medium Wyoming grassers brought 7.25 Tuesday, with 26 head averaging 1021 pounds at 7.10. Common Arizona steers went as low as 6.00 and on last week's market, tailenders on the cutter order had to go as low as 4.50.

Active demand for desirable beef cows. Saturday's top of 6.50 on strictly good 1024 pound Texas cows. Three cars meaty Jackson Hole, Wyoming heifers scored 6.25 Tuesday, three loads avering 898 pounds, 922 pounds, and 978 pounds. Idaho cows the same day made 6.00, with 814 pound good cows and heifers at 5.85. Other lots went at 5.00 to 5.50, common cows down to 4.00, canners and cutters, 2.00 to 3.50. Bologna bulls pegged at 3.35 to 4.25.

Fairly good demand existed for feeders, shipments going mostly to nearby California points and the Imperial Valley. A string of 53 very good Wyoming feeder steers, averaging 937 pounds, cleared Tuesday to a California feeder at 6.75. A load of good rangey Californiia steers last week brought 6.50 and Arizonas went at 5.50 for feeding purposes.

Calves: Receipts limited to few loads, largely from Arizona points. 88 choice 171 pound Arizona veal calves scored 9.00 Tuesday. Most calves arriving medium to good quality but weighty, bulk of 225 to 275 pounds selling 7.00 to 7.50 with heavy calves, averaging 386 pounds, at 6.00.

Hogs: Bulk of hogs being slaughtered in Los Angeles are coming from Missouri River points, shortage of cars holding down Texas and Oklahoma shipments. Only a few loads of hogs have arrived for sale at the stockyards. A 3-car shipment of porkers from Kings County, California, averaging 179 to 193 pounds, scored 11.00 last week, with 141 pound New Mexico porkers at 10.50. Packing sows averaging 294 pounds, went at 9.00.

Sheep and Lambs: Receipts of sheep and lambs were light and no choice tidy lambs in full fleece have arrived since the opening of the yards. A 3-car shipment of choice Idaho shearlings, averaging 70 pounds, brought 12.75 Saturday. A band of 804 coarse Inyo County, California, lambs had to sell Tuesday at 10.00 with 200 cut at 8.50. The band averaged 93 pounds, being on the yearling order. —Nelson R. Crow, local representative.

### POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, November 14, by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

# Snappy Notes on Livestock

**By A. L. Spellmeyer**

The cattle trade has not yet settled. At the union stockyards last Friday the government men, Jas. Christensen of Denver and C. H. Beauchamp, market supervisor under the department of agriculture for Los Angeles, called a meeting to explain the method and application of government control of stockyards to the assembled commission men, stockyards people and packers. This control means a fair market, guaranteed, with no funny business. Mr. Beauchamp is thoroughly experienced in the business, and the statement was made, that Los Angeles had no past, to handicap or rectify in stockyards customs so it would be a clean market and kept that way. Producers can figure this much, whatever the prices are there will be no sideplays, combinations or squeezing.

In the last week I have noticed an attitude of general fair play and the effort to better both feeder and beef prices to producers on the part of all factors. The people that are today hurting prices and a cattle comeback are those that are not patronizing the stockyards, cleaning up the cattle there, and encouraging stronger prices in range buys, with a definite tendency of a better market in view.

Beef has not advanced and for some grades is cheaper in fact than a month ago for it takes good stock to bring the market tops or mediums. Mr. Bixby claims an average reduction of ½ cent per lb. on fat steers and ¾ on fat cows since stockyards have been established with no reduction in price of beef by killers or retailers. However true the last is, any just consideration must admit prices have generally in all markets somewhat declined in the last two weeks. Hogs are bringing the top price of the U. S. A. here and heavy steers and heavy cows more here than in other markets for the same average grades.

The great rains in California at this time are ideal for a great part of the state. The cool weather we are having is also an encouragement, and the prospects are good for a banner grass year here. Every good year, and California has not had a good one for six years, as to range feed, arrives when rains come late and when the cold weather is experienced in early winter, instead of a very warm fall that starts grass and freezes it down later. The cool weather now delays tender sprouts but if December comes right now we should have feed in many parts of the state by January. Things appear very promising for the range men.

This has helped some on feeder catttle price. While good ordinary feeder steers average around $5.50 here, and it's less than hoped for, still considring El Paso and other points the price is not so bad. On cows it isn't so bad when quality is considered, for I saw five cents refused on some very rough cows.

Last week I saw bills of meat sales that went $10.50 for good fat heifer beef and $12.50 for good steers and $13 for veal. Hides are up. I am told by an expert the present test will run close to $15 per head for hide and offal from a good steer. This offal price and hide price seems to be what is holding up prices, even to their present margin. It means a 900 pound cow at $50 brings gross for 450 pounds of beef $49.50 plus, say, at least $12 for hide and offal, or $61.50.

Selling and delivery stands with killing at least $6.75 expense so there is an apparent $4.75 in it for the packer on that basis.

On the other hand I am told the quality steers sold at 9 cents on the opening day brought 16 cents in beeef and made money. This explains the quality demand and better price.

## CATTLEMEN OF LOS ANGELES COUNTY TO MEET

The cattlemen of Los Angeles County are invited to attend a meeting of the California Cattlemen's Association in Lancaster on Wednesday, November 22.

This meeting is of particular importance since the California Cattlemen's Association is holding a meeting in every county in the state during October and November, to discuss with the cattlemen their local problems in order that the association may formulate its program of work for 1923 to be of greater service. It is also intended to discuss with the cattlemen any legislative matters which they wish to bring before the coming session of the state legislature this winter. All cattlemen, whether members of the association or not, are urged to attend.

### PUMPS, ENGINES, MOTORS

A fund of valuable information is contained between the covers of "Pumps, Engines, Motors, Compressors, Boilers for Industrial Plants, Ranches, Etc." This is catalog P of the Smith-Booth-Usher Company of 50-60 Fremont Street, San Francisco, and 228-238 Central Avenue, Los Angeles. While it is a catalog it contains information on hydraulics and the machinery and appliances which enter into irrigation and farm power. There are suggestions for setting up pumps, tables as to water pressure measurements, storage, pipes, tables showing capacity of pumps under different lifts, friction in pipe and innumerable other hints which make it

a valuable addition to the reference library.

One attractive feature of the book is that it may be had for the asking if one will write to the Smith-Booth-Usher Company at either of the addresses given above.

## VETERINARY QUERIES

(Continued from Page 543)

carefully for a time and she only bloated a little the first night. She started to go down in her milk soon after and now only gives two quarts. She also fell away in flesh and now is a walking skeleton. She is a well bred Holstein and was always well and fat. Has had alfalfa and alfalfa hay all the year. What is the trouble and what is the remedy?—Subscriber, Colton.

Some of the milo may have packed in a mass and is still in the rumen. Stir it up by pressing in on the left side with your fist. Do this every day and also get four ounces of powdered Barbados aloes, six ounces of turpentine and two quarts of raw linseed oil and mix all together and divide into four doses. Give one dose every other day while it lasts. This may move it out and the trouble will be over.

## MISS WARNER'S TURKEYS

(Continued from Page 523)

mash at noon which is half laying mash and half bran, and have their run on the alfalfa twice a day, in the middle of the forenoon and again in the afternoon. The hens average four dozen eggs in a season.

From 50 hens mated with four toms she sold last year $475 worth of hatching eggs. This year from 46 hens she has sold $250 worth of eggs, hatched 64 poults, and had the first of May 88 eggs under hens. No hen is kept more than one season. The first of June each year all the hens in her yard are sold to the Idyllwild hotel at 40 cents a pound. Last year the 42 hens she marketed averaged $4.85 apiece. The young hens used each season as breeders are mated to toms two years old or older. By this system of keeping only toms and young stock through the winter Miss Warner saves a great deal of labor and expense and she is perfectly satisfied with the fertility of the eggs and the vigor of her young stock.

### Turkey Mothers

Turkey hens do the mothering on this ranch. A turkey hen and a chicken hen are set at the same time, the turkey being given 17 eggs and the chicken 12. This number would be too great for a chicken to hatch if they were left under her, but as fast as they hatch they are removed and placed in a warm basket. As soon as the hatch is complete all the poults are given to the turkey hen. A turkey hen will mother 25 poults.

When the hatch is finished hen and poults are placed in a coop on dry ground. The cut shows the front of one of these coops and the back of another. They are covered with shingles and are about 4 feet in each dimension. The wire front admits an abundance of air but shuts out weasels and other marauders and keeps the birds confined when the weather is cold or wet. All coops are moved frequently. Miss Warner believes in keeping poults on the ground, but it must be clean and dry. After the first few days they are allowed out when the sun is shining, and the day I was there the whole flock, of various ages, were ranging about the yard together.

### Feeding

The feeding of young turkeys is always the crucial point, and I was glad to find that Miss Warner agrees with all the other experts in believing it is not so much what is fed as how much. "Only yesterday I know I overfed my little turkeys," she said. "They were so hungry I let them eat till their crops were stuffed full, and that will not do. Probably I shall pay for it later."

The first day in the coop they are not fed at all. They must be 48 hours old before they have their first meal.

The second day they are given a little hard boiled egg mixed with grit, just once, no more.

The next day real feeding begins. The mixture of hard boiled egg, bran, onion, cottage cheese and grit is given five times, but never all the birds want. This mixture is prepared as follows: For 50 young turkeys run 1 egg and ¼ of a large onion through the meat grinder, add 1 tablespoon each of charcoal and grit, a handful of cottage cheese and a handful of bran. This makes a quart pan two-thirds full, which is an ample meal for 50 birds.

After the first week there are only three meals a day. After the fifth week the egg is omitted and chick feed takes its place. Sour milk takes the place of the cottage cheese, so the ration has now become a mixture of bran, chick feed and onion, moistened with sour milk. After six weeks the onion is dropped and the birds worked gradually onto an all grain diet. Long before this the poults are spending their days on the alfalfa, of which there are three acres for their use. They must be brought in at night, but most of the day they are picking the succulent green. An occasional meal of Suregrow sprinkled over chopped alfalfa helps to keep them growing. For fattening in the fall Miss Warner has found Kafir corn and Blackeye beans the best ration.

### WEATHER REPORT

San Francisco, November 11, 1922

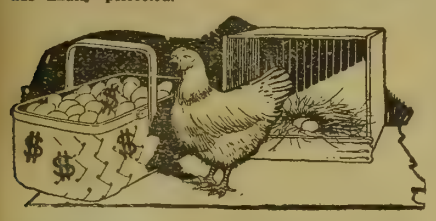
# Easy-Now to Double Winter Egg Yield

**Proven Remedy Gives Remarkable Results—Turns "Boarder" Hens Into Profitable Layers—**

Winter egg yields double and treble those of former years, are now being made by many poultrymen through the use of a compound that science has finally perfected.



This wonderful medicine, which is called "Hick's Egg-Lay," contains rare and expensive ingredients mixed so as to quickly increase the egg yield. The medicine acts on the reproductive organs and causes double and treble the usual number of ova (the germ cell of the egg) to be produced. Thus you get many more eggs and get them during the time they bring the highest prices.

Hick's Egg-Lay is prepared for convenience in tablet form. Simply dissolve one tablet in a quart of water. This is the surest, easiest and quickest way ever discovered to get more eggs.

**A Trial Costs You Nothing**

Mr. Hick is so confident that Hick's Egg-Lay Tablets will double and treble your egg yield that he is making a special kuaranteed offer of one regular double strength $1.00 package of Egg-Lay Tablets and a full size $1.00 package of Hick's famous Lice-Go Tablets all for $1.00.

Lice-Go is added to the drinking water. The medicine taken into the system of the bird comes out through the oil glands of the skin and every louse or mite quickly leaves the body. Keeps the birds always free without the poultry raiser doing any work. If you would rather have two $1.00 packages of Egg-Lay Tablets or two $1.00 packages of Lice-Go instead of one of each, say so on your order. Send $1.00 today (currency, money order, check, etc.) to Chas. M. Hick & Company, Dept. 929, 1018 So. Wabash Ave., Chicago, Illinois. If you prefer, send no money. Just your name and address and pay postman $1.00 and postage on delivery. If after thirty days trial, you are not absolutely satisfied, write Mr. Hick and your money will be refunded. This offer is absolutely guaranteed, so don't hesitate to make the test.

# HURLEYS NEW GOOSE NECK Cultivator

**The Best Furrowing and Leveling Machine on the Market—Built for Horses, also Largest and Smallest Tractors.**

This is the lightest weight efficient Cultivator and Furrower on the market. Its construction of spring steel gives it a crossbar that yields to sudden strains and it springs back. Detach the shovels and wheels and you have THE BEST LEVELER YOU CAN BUY.

Patented reinforced spring steel drawbar 5 in. x ⅜ in. with bar below 5 in. x ⅜ in. reinforced on two edges with angle iron. Shanks diamond shape 1¼ or 1½ in. Hitches for all tractors or horses. 6 ft. size only $110 with 1¼ in. shanks. 6 ft. with 1½ in. shanks $105. Made in 6, 7 and 8 ft. sizes. Horse drawn cultivator has front truck. Over 300 in use and all giving best of satisfaction. Order direct.

You can go any depth from 5 in. above the gound to 15 in. deep, setting the teeth to prevent cuttitng the roots.

**Don't fail to see our new single standard double lever subsoiler at only $80 for light tractors.**

Stark Tree Orchard of C. L. Witherell, at Middlebury, Vt.—3500 Stark Delicious Trees

← Average Size Stark Delicious Grown on a Genuine ORIGINAL TREE Strain Tree

# 74 Stark Trees = 576 Bu. Apples = $2,460.00 in Year on Vermont Farm

C. L. WITHERELL bought the land where his orchard now stands (near Middlebury, in Northern Vermont) for $40 an acre. It would have made him a scant living in corn, wheat or ordinary farm crops. Set out in Stark Trees, it is rapidly making him rich.

-$- Salesmen Wanted Good Pay Weekly Write us TO-DAY

Last year, just one block of 74 of his 11-year-old Genuine **ORIGINAL TREE** Strain of Stark Delicious trees yielded him 576 bushels of glorious apples. All but 30 bushels graded out "Fancy" or "Extra Fancy." And—they added the impressive sum of Two Thousand, Four Hundred and Sixty Dollars to his bank account.

He tells us that his **ORIGINAL TREE** Strain of Stark Delicious trees began bearing when 4 years old—and have borne every year since. He now has 1,000 more Stark Delicious 6-year-olds that he declares are "producing a bumper crop this year." On October 21, 1922, he writes: "Just shipped my last car Stark Delicious to New York. Got $6.00 per box for run of Delicious. Special Fancy $8.00 per box.

We wish that every fruit grower—every farmer—and every home-owner could see and talk to Mr. Witherell. **You** would know then WHY—

## Bears Wondrous Money-Crops in 44 Out of 48 States!

As E. P. Taylor, State Horticulturist and Consulting Expert on Horticulture says: **"Stark Delicious trees are now growing and bearing fruit in all parts of the world—and are adapted** to a wide range of climate and soil conditions." Nevertheless, there are not one-tenth enough **genuine** Stark Delicious trees planted to begin to supply the enormous demand for this "King of all Red Apples."

These great, big, exquisitely-flavored red apples are selling on the fancy fruit stands of SAN FRANCISCO, LOS ANGELES, NEW YORK, PHILADELPHIA and BOSTON at 15 to 35 cts. each. In the Eastern fruit markets they are selling for **$5.00 per bushel WHOLESALE** when other varieties bring $1.50 to $5.00 ber barrel.

The trees that bear them have made **land in the Northwest that was bought for One Dollar and Twenty-five Cents per Acre now worth $1,500.00 to $2,500.00 per acre!** This is the statement of Franklin K. Lane, former U. S. Secretary of Interior.

However, to grow genuine Stark Delicious trees and get big, regular crops of the prize-size money-makers you must PROTECT YOURSELF by planting genuine **ORIGINAL TREE** Strain of **STARK DELICIOUS** trees.

We alone control propagation from the **ORIGINAL TREE**—the 50-year-old Stark Delicious tree that the State of Iowa honored with a splendid monument in August, 1922. **No other Nursery or person can propagate from this Grand Old Tree,** which, though over 50 years old is still bearing fine crops of big apples and has never missed a crop (except one, in a year when all apples failed).

Our ORIGINAL TREE Strain of Stark Delicious propagation is continually renewed and kept close to ORIGINAL Stark Delicious tree. That's why the ORIGINAL TREE Strain of Stark Delicious trees that you can obtain from us (and ONLY from us) will assure you the surest, the most complete satisfaction.

They will bring you money-crops just like they did F. F. Thayer of Chelan Co., **WASH.** He was formerly an accountant but took up orcharding some years ago. **In the last 4 years he has banked Ninety Thousand, Three Hundred and Fifty Dollars ($90,350.00)** from 23 acres of Stark Delicious, Winesap and Jonathan trees.

**Investigate** this remarkable apple tree—**WRITE FOR THE BIG, 80-PAGE, 4-COLOR MASTERPIECE 1923 "PRIZE FRUITS" BOOK. USE THE COUPON.** Learn, too, about—

## Stark's Golden Delicious — 2-Year-Old Trees Bear in 33 States

This remarkable variety of Golden apple bore when 2 years old in 33 different states—California, Oregon and Washington being among them. **And last year trees of this variety bore crops in 11 different states despite 3 frosts and 2 freezes.**

Frank L. Wingard, Orange Grove, **CALIFORNIA,** sent us a photo of a wonderful Stark's Golden Delicious tree and stated: "This Stark's Golden Delicious tree has 128 big apples on it this year—the second after planting."

The great American Fruit Growers (Inc.), has a wonderful orchard filled with Stark's Golden Delicious trees at Wenatchee, Wash. It bears the title "Golden Delicious Orchard," and is a great proof of the remarkable commercial value of this variety of fruit tree.

And I. A. Klein, Stent, **CALIFORNIA,** is one more of hundreds of Californians who have planted this variety. He mailed us a photo of one of his trees and wrote: "It bore 18 apples this year—only 2 years old. Look at its simply marvelous growth."

And Prof. Paddock, noted State Horticulturist, frankly admits, "Stark's Golden Delicious beats anything I ever saw." **YOU** are sure to be keenly interested in the startling facts regarding this remarkable tree and apple. Get them all—**SEND COUPON** for **FREE** Copy of Big 80-Page, 1923 "Prize Fruits" Book.

**Stark Seed** **"Bore Heavy Vegetable Crops Despite 50-Day Drouth."** "This drouth ruined almost all of the gardens and crops around here, but our vegetable garden, planted with Stark Seeds—weathered it well and bore heavy all through the dry weather," writes Mr. Ulrich Southeimer, Rushland, Pa.

**Our Big Edition of Stark Bro's 1923 Vegetable and Flower Seed Catalog is now ready. *SEND COUPON* for FREE copy.**

Vol. LIX — November 25, 1922 — No. 22

# By the President of the United States of America

A PROCLAMATION

In the beginning of our country the custom was established by the devout fathers of observing annually a day of thanksgiving for the bounties and protection which Divine Providence had extended throughout the year. It has come to be perhaps the most characteristic of our national observances, and as the season approaches for its annual recurrence, it is fitting formally to direct attention to this ancient institution of our people and to call upon them again to unite in its appropriate celebration.

The year which now approaches its end has been marked, in the experience of our nation, by a complexity of trials and triumphs, of difficulties and of achievements, which we must regard as our inevitable portion in such an epoch as that through which all mankind is moving. As we survey the experience of the passing twelvemonth we shall find that our estate presents very much to justify a nationwide and most sincere testimony of gratitude for the bounty which has been bestowed upon us. Though we have lived in the shadow of the hard consequences of a great conflict, our country has been at peace and has been able to contribute toward the maintenance and perpetuation of peace in the world. We have seen the race of mankind make gratifying progress on the way to permanent peace, toward order and restored confidence in its high destiny.

For the divine guidance which has enabled us in growing fraternity with other peoples to attain so much of progress, for the bounteous yield which has come to us from the resources of our soil and our industry, we owe our tribute of gratitude, and with it our acknowledgement of the duty and obligation to our own people and to the unfortunate, the suffering, the distracted of other lands. Let us in all humility acknowledge how great is our debt to the Providence which has generously dealt with us, and give devout assurance of unselfish purpose to play a helpful and ennobling part in human advancement. It is much to be desired that in rendering homage for the blessings which have come to us we should earnestly testify to our continued and increasing aim to make our own great fortune a means of helping and serving, as best we can, the cause of all humanity.

Now, therefore, I Warren G. Harding, President of the United States of America, do designate Thursday, the 30th day of November, as a day of thanksgiving, supplication and devotion. I recommend that the people gather at their family altars and in their houses of worship to render thanks to God for the bounties they have enjoyed and to petition that these may be continued in the year before us.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this second day of November, in the year of Our Lord, one thousand nine hundred and twenty-two, and of the independence of the United States of America the one hundred and forty-seventh.

Warren G. Harding.

OUR ADVERTISING RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest, bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

☞ If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

### DITORIALETTES

The Thanksgiving scene on the cover is thoroughly Californian. The snow is on the mountain tops, the orchards have been laden with fruits, and now the cornucopia is pouring into the valleys the riches produced during the last 12 months. There is no place in the world where the president's call for "a day of thanksgiving, supplication and devotion" should meet with heartier response. "It is fitting formally to direct attention to this ancient institution of our people and to call upon them again to unite in its appropriate observance." "Let us in all humility acknowledge how great is our debt to the Providence which has generously dealt with us."

* * *

Many barley fields, especially in the northern part of the state, are changing valley and hillside into green. The green of the growing crops is all the more attractive at this season in such contrast with Thanksgiving scenes "back in the states" where so many of us were born. It has been a wonderful year for the Pacific Coast, and promise is today that the coming year will prove even greater cause for thanksgiving.

* * *

At the recent fruit growers conference at Berkeley several apricot growers insisted that if the time should come when they could be recompensed for producing high quality apricots the apricots would be produced. Several growers, however, insisted that when quality and size had been produced canners and dryers had failed to recognize it. One grower asserted that he had produced apricots running nine or ten to the pound and was offered the same amount as was paid to his neighbor for fruit running 14 to the pound.

The Cultivator Leads in Automotive Advertising

During the first nine months of 1922 California Cultivator has led all the farm papers in the United States in the volume of tire advertising carried. It has also led in the volume of tractor advertising and was second in the United States among farm papers in the volume of truck advertising, being surpassed only by an eastern dairy publication. The Cultivator also led all California farm papers in the volume of automobile advertising by a considerable margin. Advertisers everywhere recognize the importance of the farm market in California and the fact that California Cultivator reaches more farm homes than any California publication, daily, farm paperfi or magazine. The circulation of any California publication, daily, farm paper or magazine. The circulation of California Cultivator in thirteen counties in California that are among the highest fifty in the United States in crop production is greater on farms than that of any California farm paper. California Cultivator county circulation statement, also Auditor's A. B. C. circulation report furnished on request. Following is the lineage reported by Advertising Record Company:

| Kind of Advertising | Paper | Rank in U. S. | Number lines Advertising Jan. to Oct., 1922 |
|---|---|---|---|
| Tires | CALIFORNIA CULTIVATOR | 1st | 22,365 |
| Tires | 2nd California Farm Paper | 9th | 13,619 |
| Tires | 3rd California Farm Paper | 41st | 2,288 |
| Tractors | CALIFORNIA CULTIVATOR | 1st | 20,007 |
| Tractors | 2nd California Farm Paper | 2nd | 19,402 |
| Tractors | 3rd California Farm Paper | 25th | 7,658 |
| Trucks | 3rd California Farm Paper | 33rd | 1,596 |
| Trucks | CALIFORNIA CULTIVATOR | 2nd | 6,792 |
| Trucks | 2nd California Farm Paper | 15th | 2,802 |
| Automobiles | CALIFORNIA CULTIVATOR | 12th | 11,948 |
| Automobiles | 2nd California Farm Paper | 22nd | 9,382 |
| Automobiles | 3rd California Farm Paper | 29th | 6,810 |

During the year 1921 California Cultivator led all California farm papers in volume of advertising carrying a total of 540,399 lines.

California Cultivator is the first choice of California farm papers by a substantial majority of advertisers.

It costs money to thin fruit and maintain the soil conditions required for large production of large fruit. Unless the grower is convinced that he can deal with the packer who recognizes that additional cost he will very naturally produce the greater tonnage.

* * *

Dairymen and distributors in the meeting at Fresno also discussed the quality problem. The impression there prevailed that the consumer was willing to pay for quality if the quality were produced. The consumer of dairy products, as a rule, demands higher quality and better service than he does of any other production of the farm. The consumer who is asked 60 or 70 cents per pound for butter is justified in demanding not only quality for today, but quality which will be lasting.

* * *

The time was when we were admonished by the old McGuffey's reader: "Go to the Ant, thou sluggard." We may become wise by considering her ways, but the wise orchardist and the wise housekeeper find better returns from getting after the ant with a club. It has been said that "The ant is the most abominable of all animals." It nourishes and helps to perpetuate aphis; it spreads blight and other diseases of trees; it even destrcys timbers of houses; it is an insufferable nuisance in the home, and we believe there is no instance of its being in any way a benefit to mankind. Swat the ant.

* * *

There is no discount on the sun as an aid in curing California products. Neither is there discount on its ability to manufacture sugar through cooperation of vineyard and orchard. Notwithstanding that it seems the dehydrator or evaporator has come to stay. It has been used to a limited extent as an aid in drying raisins, prunes, apples, peaches, nearly every fruit grown in the state. It is asserted that it is producing a somewhat higher grade of fruit with less shrinkage and more satisfactory return to the grower. California sun cured fruit will never entirely disappear from the market, but the dehydrator is coming into more general use every year.

### LOSS TO THE STATE

Dr. Elwood Mead has tendered to Governor Stephens his resignation from the chairmanship of the state land settlement board. The dispatches do not give the reason for this action. We know Dr. Mead's ambition to push forward land settlement work. This in part to aid worthy and efficient young farmers in locating on lands fitted to their abilities, but more, we believe it was because of his ambition to serve his state by increasing its population and giving opportunity to that population for greater efficiency.

One of the steps by which Dr. Mead hoped to serve his state was to be made possible through the land settlement act providing for a bond issue of $3,000,000 and which was voted upon at the recent election. This measure failed to carry, we believe, because of misunderstanding by the majority of the voters. It now appears that there was a determination to secure greater economy at any cost of efficiency. To that end nearly every measure calling for issuance of bonds was voted down. In the case of the passage of the land settlement act any funds raised through sale of bonds would have gone into the treasury and become a revolving fund. This fund, together with the interest thereon, would ultimately have returned and liquidated the entire issue. Thousands of acres now of comparatively no value would have been turned into high producing lands, increasing the income of the state and community.

The failure of the voters of the state to endorse the great work which has been done by Dr. Mead and others of the land settlement board is, we believe, the real reason for Dr. Mead's retirement. The state suffers a great loss thereby and we hope there may yet be some means of taking advantage of his abilities.

### RIO COLORADO?

Is the Colorado River to remain uncontrolled indefinitely? Is it to remain a menace to rich lands once desert and now producing thousands of trainloads of food and textiles? Is it to be controlled and made to hold back its floods and turn them into reclaimers of other thirsty lands and producers of power and heat and light for our homes?

The only answer yet vouchsafed by Santa Fe seems to consist of one big "?." The Colorado River Commission has been meeting there for the past fortnight and has been accused of "laying down a heavy barrage of silence." It is also asserted that the silence has not been so complete within the four walls of the executive sessions.

As we go to press the dispatches announce that Governor Elect Hunt of Arizona has wired the commission, "The state of Arizona cannot enter into any compact with the other states involved in the apportionment of the waters of the Colorado River for at least two years."

Also that, "In his telegram tonight, Hunt approved the statement made by the reclamation association. The fact that Arizona lacks information as to the acreage irrigable in the state under the Colorado River and as to the engineering problems involved are given as the governor-elect's reasons for believing that Arizona cannot enter into a compact at the present time,"

We can only end as we began with a question mark, but we can not help but ask, Is the advancement of the Southwest to be stayed while selfish interests still further "investigate?"

### BETTER APPLES

Circular 137, issued by the New York agricultural experiment station at Genoa, should be of particular interest to California apple growers. It treats proper storage and handling and the necessity for having fruit clean and free from worm and scale infestation when placed in storage. This information, in itself, may not be of so much interest since most of our growers already know this from experience, but it shows that more interest is being taken in the proper handling of the apple crop. When the eastern apple growers awake to the fact that proper care in handling and packing means more demand and better prices, it is going to make the competition more keen for California, Oregon and Washington.

No one has ever disputed the fact that good apples are grown in the Eastern states, but in the past few growers have paid much attention to the handling of the crop and to putting it on the market in attractive packages. As a result our well graded and attractively packed Western fruit has had all the call.

We will have to be even more particular in the future if we hold this trade. Our fruit must not only have the attractive appearance but its eating qualities must measure up to its appearance.

Good appearance first attracts favorable attention, then if the quality proves equally good the customer will thereafter call for your brand of fruits. There is nothing that so disgusts any of us as to buy a nice appearing article and find the quality inferior and usually all the arguments that can be put forth fail to induce us to again buy that brand.

Abraham Lincoln, we think it was, once said: "You can fool all of the people part of the time and some of the people all of the time but you can't fool all of the people all of the time," and we should bear this saying in mind in the packing and handling of all our orchard and farm products. If we are going to fool the people at all let's give them something better than they are really looking for.

California Cultivator

Vol. LIX, No. 22 Los Angeles, November 25, 1922 One Dollar Yearly

# Pears, Prunes, Apricots Convene

By C. B. Messenger

A SPECIALTY convention is not an innovation. It has been here for years. Farmers and fruit growers are, however, learning more as to its real value. There is still abundant room for a state convention of fruit growers and farmers who shall gather and discuss the larger problems of transportation, legislation and innumerable other of the larger questions affecting agriculture. But in discussing cultural practices there is little inspiration to a breeder of hogs in listening to discussion on bud selection of citrus. So the convention which deals with one type of fruit, or one class of animals, or possibly with a half dozen different productions, but in a limited locality, has come to stay.

The wisdom of this procedure was abundantly proved in the gatherings last week in Berkeley. On Monday, pear growers from practically every pear growing section of the state discussed pear blight, pear thrips, red spider, root stocks, pears canned, dried, pears as a food, pears as a confection, pears in storage, in the market and pears from every imaginable standpoint.

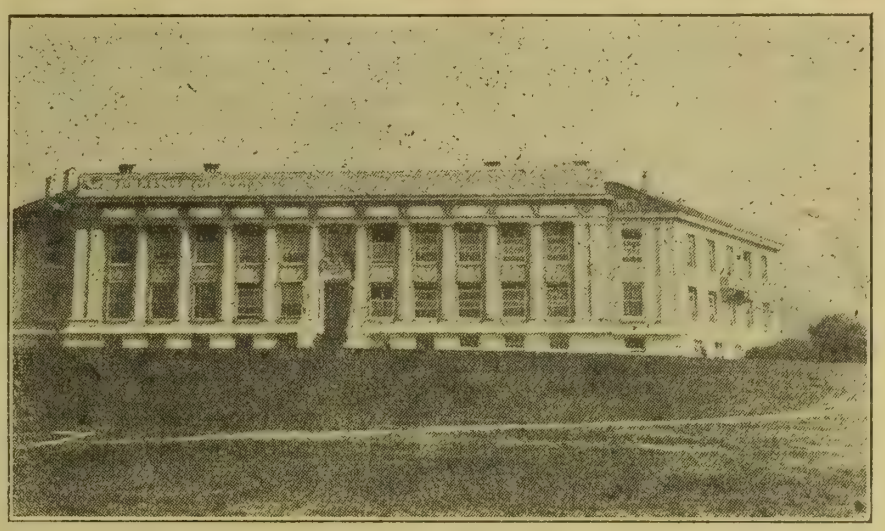
Tuesday was prune day, and again red spider, thrips, sun-made prunes, dehydrated prunes, irrigation of prunes, and a question box which brought out innumerable angles of the industry.

Wednesday was apricot day, and apricot day gave opportunity for discussion of sour sap, brown rot, root stocks, by-products, long and short pruning, likewise music by the faculty quartet. That quartet, by the way, was the life of the whole show. But in the last analysis for right down hard work and real preparation for the comfort and edification of the guests, Prof. W. V. Cruess should have been handed a medal. Naturally Prof. Cruess had anticipated a reasonable sized crowd. But at the first session of pear growers Monday morning, Hilgard Hall was filled and chairs were being placed in aisles before the meeting was called to order. Still people stood in hallways anxious to hear the program. Adjournment was later had to a larger hall, which in the afternoon was filled to overflowing. At the banquet in the evening, for which less than 200 had registered or bought tickets, more than 300 attended, and had to stand about the wall of the banquet chamber until other long tables could be supplied. Cruess always rose to the occasion and it was voted "four great days."

The attendants got punch or real kick out of every day's session. The pear growers were really the most polite, though a showing of thrips injured pears, gnarled little runts, which some grower had seen on the market, caused some warmth of discussion. Likewise Prof Howard's illustrated talks on root stocks in France and root stocks in California caused no little discussion. Manager Sheehan of the Grape Growers' Exchange, injected a bit of life into the transportation discussion which this year causes discussion whenever two fruit growers get together. Mr. Sheehan has been observing water transportation and insists that the only hopeful outlook is development in that direction. He felt there should be appeal to water transportation people to aid in the investigation of best methods, and described fully the effort of the grape growers to put California grapes into Atlantic ports through the use of carbon dioxide and refrigeration.

Prof. Leonard Day charged the ant with being one of the worst pests of the pear. The ant is more responsible for spread of blight from blossom to blossom than perhaps any other insect. The bee has usually held the place of dishonor, but Professor Day spoke a good word for the bee because of its aid in pollination, and because of that service it's carrying of blight could be well excused. If ant and aphis are both destroyed the control of pear blight is materially aided. Other insects which should be watched are thrips, squash bugs, beetles, and another source of blight spread is spatter of rain. The remedy for blight given by Professor Day was bichloride of mercury and cyanide of mercury, one part of each to five parts of water. The addition of a little glycerine maintains for a longer time activity of this remedy.

Professor Reimers came down from Oregon and scored California pear growers good and proper. Professor Reimers said that if Oregon growers conducted their fight on pear blight as did many of the growers in California's pear growing sections the industry would be terminated there. Oregon growers are compelled to face the condition of large content of moisture in the atmosphere which is most favorable to spread of the blight bacteria. Incidents like that of one pear grower on the Sacramento River who merely dumped his blight infested prunings over the bank and let them float down stream called for scathing remarks and demand for control of such abuses. Unfortunately the best method of control is through education and securing of education is an impossibility for the type of people who would do a thing so destructive to a great industry. Professor Reimers gave a tribute to Professor Day as doing most thorough and best investigational work in the United States in pear blight. In the matter of growers practices Reimers insisted: "You folks know enough. Put your knowledge into effect. Stop being so careless." "Pear blight was brought from Eastern states to the Pacific Coast in 1900. It may be effectively controled by careful work. Keep water sprouts absolutely cut out. Use resistant root stocks and trunks. Use abundance of Bordeaux paste or other disinfectants, on all fresh wounds or cuts. Subdue all flies, thrips, ants, and other insects. Save the bees if possible." "The ant is the most abominable animal with which we have to deal. It feeds on the ooze caused by blight and carries the disease direct to the blossoms as it goes in search of nectar." "For applying bichloride disinfectant use new paint."



To Rescue for Human Society the Natural Values of Rural Life

Hilgard Hall at University of California, Berkeley, where many sessions of the Fruit Growers' Conference were held.

As to stocks, Professor Howard could not recommend the much used Japanese stock, in fact, he said it should absolutely be discontinued. If dependable French seed may be had and onto that a resistant trunk for the tree be grafted very good results may be had. Of the newer introduced stocks, P. usuriensis and P. calleryana, usuriensis was especially recommended in localities where high water table might prevail. Professor Howard recommended the use of resistant French stock or possibly usuriensis on which there is grafted a Surprise trunk. This tree is set in orchard form and reworked in the branches the third year.

Frank Swett handled the transportation question without gloves. He referred to the fact that normally New York City takes 35 per cent of California's perishable products. However, in a year like the present, normal shipments are not possible because of inefficient transportation and California grape growers have lost in excess of $10,000,000 and pear growers have suffered great losses. Experimental water shipments of pears have been made to Great Britain which have netted to the grower six cents a pound. That outlet will be used more freely another year.

Dean Hunt insisted that pear growers would serve their own interests best by producing only the best pears. Once produced they would insist on recognition of quality produced. They should be like the small boy in his retort to his mother when she asked as to how much is six times eight and again as to the product of three times 16 and again as to twice 24. Each time the problem had been instantly and correctly solved and the mother remarked, "That's good." The youngster instantly retorted, "T'aint good, that's perfect."

In dehydrators there are both good and indifferent. None of the speakers placed them in these classes but gave many valuable hints in the matter of dehydrating. J. O. Holt, president of the fruit growers association at Eugene, Oregon, gave much as to Oregon practices. Climatic conditions forced early consideration of some artificial means of curing fruit. In fact, first dehydration experiments in Oregon were back as far as the '80s. The tunnel type is the usual preferred type in Oregon. The most thorough investigation of principles and practices has, however, been made by the California college of agriculture. Professor Christie referred to the "jolt of 1918" which forced thorough consideration of some means of drying fruit other than the sun. In 1918, thousands of tons of high quality fruit were destroyed by heavy rains continuing nearly two weeks. Investigations have determined that best drying temperatures are between 120 and 140 at the beginning and 165 degrees at finishing. One of the principal factors in dehydrator success is in percentage of humidity. Volume of air and rapidity of travel under forced draft are likewise important. A velocity of 750 lineal feet per minute gives satisfactory results. There have been over 40 dehydrators built in California during the past year.

Professors De Ong and Essig gave valuable information as to control of red spiders, mites and thrips. The gist of their remarks may be given in "Get 'em before they get there or you'll never catch up." Both the speakers referred to bulletins of which they are authors for formulas for control of these pests. Professor de Ong's bulletin, "The Control of Red Spider in Deciduous Orchards," is just off the press and every orchardist interested should write College of Agriculture, Berkeley, for a copy. It is No. 347. Professor Essig's is Circular 223, "The Pear Thrips," and may also be had from the college. For red spider, first spray the 12th of July, never later, some preferring even a month earlier. Professor Essig insisted pear thrips may be almost completely controlled if treatment is begun early enough. The pest is now in the soil and thorough working of the soil aids somewhat in

# Agricultural News Notes of the Pacific Coast

## Northern California

Farm center meetings in Shasta County at Fall River, November 25; Mountain, 26; Mellville, 28.

The almond crop of the state will amount to about 8,000 tons. Last year's crop was 6,000 tons.

On the first of November it was estimated that only 40 per cent of the potatoes in the Delta had been dug.

Fruit Growers and Farmers Convention at Sacramento, December 12-14 instead of November 21-23 as first announced.

Rains the latter part of October and first of November have interfered with rice harvesting. Not over 60 per cent of the crop has been harvested.

November 29-December 3 are the dates of the California state poultry show at Oakland Auditorium. More than 7,000 birds have been entered.

Lodi practically ended eastern grape shipments with the coming of general rains. Many of the later shipments have not brought satisfactory prices.

The superintendent of the Libby cannery at Gridley says he has 40 carloads of canned peaches ready for delivery but cannot secure cars for shipment.

At the recent meeting in Woodland of the Yolo, Solano, Colusa Wool Growers Association a vigorous campaign was planned against coyotes and mountain lions.

Apple shipments from California to November 1 were about 2650 cars as compared with 3750 cars last year. A larger percentage than last year will be sent to the dryers.

The Honcut-Yuba irrigation district comprising 31,000 acres will vote on a bond issue for $1,655,000 on November 24. The funds are for diversion of water from the Yuba and the building of canals.

Green tomato shipments from the Centerville packing plant in Alameda County are being held back by car shortage. Practically all are destined for Chicago. Those already packed are beginning to ripen.

It has been decided to construct the Sacramento-Sutter Counties joint district boulevard on top of the levee from a point south of Nicolaus where the present road now mounts the embankment, into Sacramento.

E. J. Stirminian of the agricultural extension service has been touring Shasta County with truck loaded with equipment to carry on farm home water supply, farm home lighting and tractor repairing demonstrations.

E. E. Kaufman reports California's yield of beans "other than Limas" as varying from four sacks to the acre in some sections to as high as 23 sacks in others, with an average for the state of about 780 pounds. About 200,000 acres will be harvested.

During the month of October in sunshine, Sacramento failed to line up to normal condition with a percentage of possible hours of sunshine of only 73 against a normal of 82 per cent. Although clouds obscured the sun more than usual, not as much rain as may be ordinarily expected during the tenth month of the year was recorded. The records show .72 of an inch of rain for the past month against an average of 1.04 inches.

## Central California

Barley fields are greening up in the valley.

Madera farm bureau center is campaigning for new members.

November 25-December 2, dates for Lindsay's first annual exposition and citrus show.

Local meetings of Kern County farm bureau at Shafter, November 27; Arvin, December 1.

Dr. Elwood Mead of the state university, has resigned as chief of the state land settlement bureau.

It has been estimated that California grape growers lost over $10,000,000 this year because of car shortage.

The Oakdale Almond Growers Association has shipped 24 carloads of nuts this season, almost double last year's record.

Final contracts for equipment for Don Pedro dam have been let by the Turlock and Modesto irrigation districts.

It appears that the Sweet Potato Growers Association of Merced County will not be able to operate this season because of failure in membership.

The raisin growers of California celebrated the tenth anniversary of the organization of the present successful raisin marketing association, November 15.

Santa Clara Valley prune growers are being converted to necessity of installing dehydrators. There have been 40 dehydrators built during the past year.

The Pacific Slope Dairy Products Show at Fresno last week resulted in education of a great number of people as to the importance of the dairy industry to the state.

Tests made by County Agent Jungerman of Stanislaus show increased production of almost a ton and a half of alfalfa per acre where ground was treated with sulphur.

According to figures given out by the Pacific Fruit Express, Southern and Western Pacific and Santa Fe railroads, California this year shipped east $84,000,000 worth of grapes.

Oakdale, Stanislaus County, stockmen feel that establishment there of extensive feed yards by Allen & Pyle will make this one of the large cattle shipping centers of Central California.

Records of the Kern County cow testing association show 24 cows producing over 45 pounds fat in the first month's test of the second year. Two produced over 70 pounds, 19 over 50.

The road improvement program of Fresno County for the past year was the greatest in history, according to C. P. Jensen, county surveyor. During the year there were 154 miles highway constructed, 42 miles oil road and 113 miles improved mountain road. Several large units in the highway system are now under construction.

For the first eight months of 1922 exports of raisins have amounted to four times as much as the entire year of 1921, according to report released this week by the Sun-Maid Raisin Growers. All exports this year amounted to $4,500,000. The Sun-Maid Raisin Growers has offices in London, Birmingham, Manchester, Glascow. Amsterdam and Copenhagen.

## Southern California

A citrus and poultry show is planned for Brawley in the near future.

The Woman's Club of Yucaipa held an apple festival, November 24 and 25.

Highways in Riverside County are to be resurfaced with gravel to halt deterioration.

Dried sliced oranges are being placed on the market by J. H. Strait of Redlands.

The Howard Rose Gardens at Hemet has just set in cold frames more than 2,000,000 cuttings.

Mayor Evans of Riverside is attending meeting of the Colorado River Commission at Santa Fe.

Thousands of new sign posts are now being placed by the Automobile Club of Southern California.

The annual election of officers in the Riverside County farm bureau will be held at Corona, December 12.

The Poultry Producers of Southern California, has under erection a concrete packing plant in Los Angeles.

The Westmoreland Waste Ditch Association will ask the Imperial Irrigation District to take over its system.

Cattlemen of Santa Barbara County met at Los Alamos, November 20, to discuss the association program for the winter.

The San Bernardino station of the Poultry Producers of Southern California will be discontinued after the present storage season.

The Palo Verde Cotton Association assures cotton growers payment on basis of 20 cents a pound for 1923 crop. A large acreage is expected.

Location of deciduous fruit specialists and experiment station in Southern California was asked by recent fruit growers institute at Van Nuys.

Mrs. Woodworth, for five years in charge of home demonstration work in Riverside, resigned her position. Her successor has not yet been appointed.

The Coachella Valley Grapefruit Association has just shipped a carload of grapefruit through the Mutual Distributors of Redlands which will market the association's crop this year.

Effect of burning, over of watersheds in San Bernardino mountains was felt during the recent rains when flood waters in Warm Creek and City Creek overflowed hundreds of acres and damaged several bridges.

Annual meeting of stockholders of the Southern California Fair Association will be held at Riverside, December 11. 45 directors will be chosen, among them representatives from Orange and Los Angeles Counties.

Citrus growers will ask quarantine inspection of all automobiles entering the state. This matter will be presented by A. E. Bottel of Riverside at the Farmers and Fruit Growers Convention at Sacramento, December 12 to 14.

Local farm bureau meetings will be held in Los Angeles County at Littlerock, November 28; Whittier, citrus survey meeting, 27; Whittier, December 1; San Fernando, 1; Downey, 4; Glendora, 4, Zelah, 6; Rivera, citrus survey meeting, 11.

## The Coast and General

Spain's citrus crop is from 25 to 30 per cent larger than last year's.

The Pan-Pacific Commercial Congress held session in Honolulu, October 26 to November 6.

Cooperative marketing as practiced by California farmers is being studied by Ontario, Canada, producers.

The Columbia basin project has been approved by report of F. M. Goodwin, assistant secretary of the interior.

The annual picnic of the Jersey Cattle Club of Oregon was held at Grays River, with 100 attendants.

Early October rains in the Yakima Valley of Washington have damanged alfalfa hay for baling and shipping.

The National Rivers and Harbors Conference will meet in 15th annual convention at Washington, December 6-7.

Enormous crops of fruit in Switzerland are embarrassing growers. Effort is being made to turn much of the surplus into cider and other juices.

Prune evaporating plants are busy in Oregon. They report that growers are delivering more than they can handle. Growers receive $20 a ton delivered at dryers.

Meat canning and meat products factories are proposed for Durban, South Africa, and other cities in the grazing area to profitably handle the large surplus of cattle.

A Seattle concern is planning to establish a large plant in Honolulu for handling cane sugar molasses as stock feed. Many of the sugar planters do not store or ship their molasses.

Speaking of high prices for vegetables. At Aden, Arabia, potatoes and tomatoes retail for about 80 cents a pound; onions and sweet potatoes 60 cents; spinach about $1.10 per pound.

The famine region of central China will this year harvest a crop of rice. Fruits, sweet potatoes, beans and peanuts gave good yield. Extreme famine conditions have prevailed there for more than a year.

Banana plantations in southwestern Mexico have been seriously damaged by hurricane sweeping the Gulf of Mexico. Heavy winds were followed by torrential rains which inundated great stretches of Campeche, Tobasco and Chiapas.

Switzerland this year is continuing her practice of the last seven years of buying up the entire domestic production of bread making grains and has guaranteed her growers a price higher than that prevailing on the international market.

Manitoba vegetable growers have a cooperative marketing organization chartered at $100,000, divided into shares of $30 each. The organization has a warehouse with storage capacity of 200 cars. Every share holder must be a bona fide grower of vegetables for commercial purposes.

Australian fruit growers, alarmed by falling off in exports of canned fruits and jams, have joined with the government in a thorough inspection service. All canning, grading, labeling, and packing is now carried on under expert supervision, and exportation of canned fruits is prohibited unless they are prepared and graded to the satisfaction of the customs department.

# Deciduous Pruning Results During the 1922 Season

By Vincent F. Blanchard, Assistant Farm Adviser, Los Angeles County

EVERY fruit grower in Southern California who has had an opportunity to observe his own neighbors' orchards knows the fruit crop situation for the past season. It has been one of the most disastrous fruit seasons in the history of the industry in California. On account of its poor quality canners have had to turn down fruit which had been contracted. Hundreds of tons of poor quality fruit were canned which should never have been canned. Many more tons of fruit were dried which were not even fit for drying. The fresh fruit markets were swamped with miserable undersized fruit which was hardly fit to eat. It has been a year of poor prices for the tonnage was great and the quality poor.

With these disastrous conditions staring him in the face the deciduous fruit grower has been on the hunt for the cause. Generally he has picked on pruning as being the cause and in some instances has determined to change his pruning practices back to the old standard California heading back system. Has the grower been justified in coming to this conclusion or has he overlooked some very important and pertinent factors which have an important bearing on the whole problem?

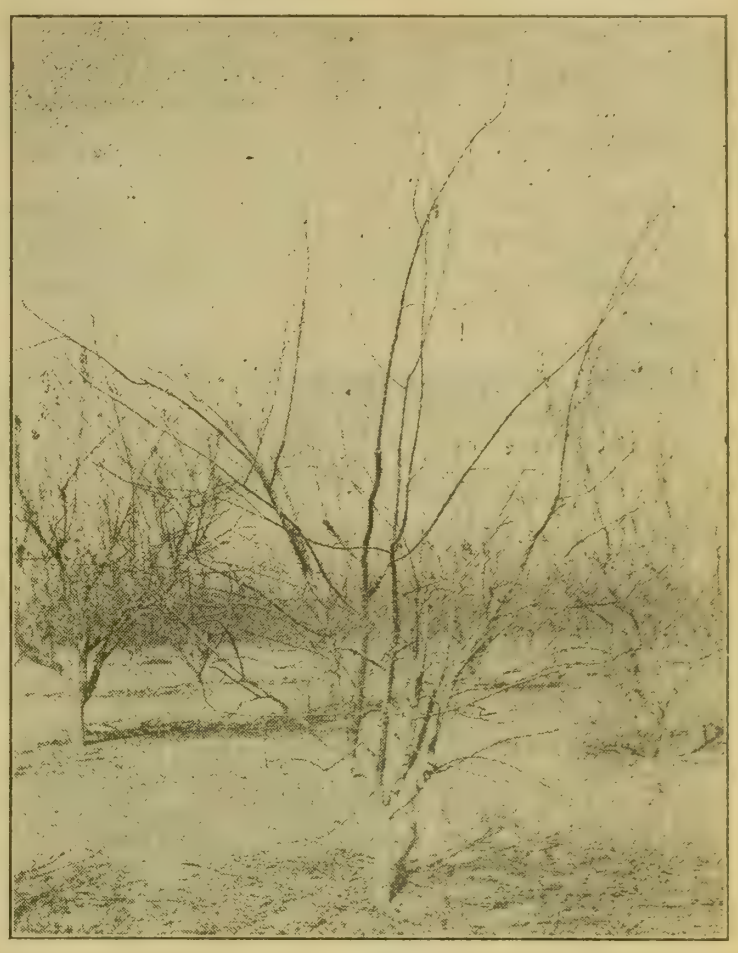
First Pruning of Apricot

Next year this tree will be full of fruit spurs as the result of letting light and sun into the center.

Up to four years ago the standard pruning method used in California was the open vase heading back system. All growers are familiar with this system and its effects on the trees, with the production of great length growth during a long period of the growing season; the great density of foliage produced which shaded out fruit wood and prevented fruit bud formation within the tree; and its propensity for producing irregular crops. As a result of investigations by the college of agriculture over a period of several years a different system was presented to the fruit growers of California. This system is essentially a thinning system, but is popularly known as the "long" pruning system. All investigations and trials of this thinning method pointed to its superior value in comparison with other methods. Trees pruned by this system bore fruit earlier, had a better distribution of fruit, greater production was obtained, and the fruit was of excellent quality when properly cared for. Orchards which had the two systems in use side by side showed consistently better results with the "long" system.

The agricultural extension service directed much of its efforts towards teaching the thinning system to fruit growers. Within four years 60 to 70 per cent of the fruit acreage of California was changed over to this system. It was expected with the adoption of this system of pruning by growers who had never pruned by it before that many mistakes would be made. Many mistakes were made, and it is indeed too true that a large percentage of those attempting to prune by the thinning system have made a poor job of it. Many have accepted the system as requiring but little if no pruning, others have tried modifications, and but few have really accomplished

(Continued on Page 560)



Satsuma Plum

Pruned by Dr. J. C. Whilten and considered an ideal tree.

# Long Pruning

By Leonard Coates

THIS would be better named "reformed pruning," the term "long" being somewhat misleading. It behooves all fruit growers to take heed, with an unbiased mind, to the principles laid down by the Davis farm exponents of this modification of the old method of heading back, which often amounted to a shearing of the tree top, if the work were done by not over intelligent hired help.

If it is admitted that the principle is right, then the practice must be equally correct whatever the age of the tree.

Dr. W. L. Howard has been able to show by the aid of charts prepared from the actual results of three years pruning by the two methods, that much that we had been taught to believe was mere theory and not borne out by facts. For instance: that to the extent the top of a young tree is headed back the roots will respond by making greater growth; the reverse being true. We always thought that a limb heavily cut back would make much more growth in diameter as well as length than a limb lightly cut, or not cut at all; the reverse again being true.

The figures shown were the results of experiments made with a large number of fruit trees for a period extending over three years, the averages being given in every case. At the end of three years the trees were taken up, and the wood growth, diameter and length measured, the fruit spurs counted, and both tops and roots weighed. In every case, except the downward growth of roots, the results showed nearly double in the long, or modified, pruning than where the trees were pruned after the manner in common use in California orchards. It is not easy to grasp the full meaning by reading the plain statement.

By the two methods of pruning, in the "reformed" system at three years the spread of roots was nearly double in length and in weight; who can estimate the importance, as it is in a more or less horizontal growth that roots obtain the food needed rather than in a vertical direction?

We aim to get a "stocky" tree and to that end adopt a very vigorous system of heading back. Dr. Howard's results show that in a given time the trees very lightly headed, and leading shoots not cut at all, showed almost double the diameter.

The reformed pruning promotes a much larger number of fruit spurs low down and on main limbs. In the case of the pear, more than double. If, as in the case of pears, fruit should set too heavily towards the end of limbs, some thinning of fruit may be advisable, and a light cutting of limb, always to a lateral, and of upward tendency.

In some instances, and as trees get older, the pruning will consist mainly in the thinning out of fruit spurs.

In all cases this system requires a much greater thinning out of wood growth than has been the practice in commercial orchards. On the other hand, and as economic compensation, there are fewer shoots to be thinned out than where the heavy cutting causes a multitude of sprouts to grow.

These are some of the main points from notes made on a recent lecture by Dr. Howard in Lake County.

There is no doubt that there is direct economy of labor in there being very many less cuts to be made. The more indirect saving of labor will be in ultimately securing a stockier tree with the accumulating advantages seen when harvesting a crop, spraying and pruning.

There is also less danger from sunburn on main limbs, as this method tends to make the spread of the tree gradual, so that the bark becomes ripened slowly thereby resisting injury from sun. The old method, by which the center of tree becomes more and more densely shaded, requires at times the use of the saw in cutting out large limbs. This results in admitting the sun's rays acutely where the bark has not been hardened to it, sun-burn and borers ensuing.

These are the facts, and I believe the fruit growers of California will be unanimous in their appreciation of the pruning demonstrations conducted by the pomological department of the college of agriculture.

# Golden Returns for Golden Fruit

A FEW paragraphs from the annual report of Manager E. G. Dezell of the California Fruit Growers Exchange were given in the last Cultivator. Crowded columns forced out much of the valuable part of the report. That part having to do with varieties of citrus and return for each was not given. It is given below:

By E. G. Dezell

### The Navel Orange Crop

The Navel orange season opened auspiciously. The movement from the early districts in central and northern California dovetailed into the finish of the Valencia season, thus making the supplies of California oranges continuous. The fruit met with a strong demand; and although the crop ran to rather small sizes, less desirable at holiday time, the results obtained were satisfactory.

Cold weather during November in the central and northern districts impaired the quality of a portion of the fruit, materially reducing the supply of Sunkist fruit from that source. The shipments of Navels from the central and northern California districts were substantially the same as those of the previous year.

On account of the small sizes and late maturity, the early shipments of Southern California Navels through the exchange were much lighter than usual, amounting to only 73 cars prior to December 10, as compared with from 500 to 1000 cars ordinarily shipped for the holiday market. The great bulk of the Southern California crop was on the trees at the time of the freeze; the shipments amounted to only 40 per cent of the estimated crop. There was a heavy dropping of Navel oranges during the season; much of this was fruit that had been badly frozen but there was also a considerable drop of good fruit.

The exchange shipments of Navel oranges from all districts for the year equaled 10,101 cars, as compared with 18,732 cars in 1920-21 and 12,406 cars in 1919-20. Expressed in boxes, the shipments were 4,040,424 boxes this year, 7,492,606¾ boxes in 1920-21 and 4,962,588½ boxes in 1919-20. The market strengthened immediately following the freeze and high values prevailed throughout the movement of the crop. Shipments were completed about five weeks earlier than is usual with that variety.

### Other Oranges

The Seedlings, Mediterranean Sweets, St. Michaels and other miscellaneous varieties were moved early because of their tendency to drop following the cold weather. The comparative demand for these varieties was lessened on account of their running to extremely small sizes, but the prices received were considered as generally satisfactory. The exchange shipments amounted to 613 cars, as compared with 1,410 cars for the previous season.

The prevailing high prices on both California and Florida oranges attracted to the United States increased importations from Italy, Spain, Brazil, Australia, South Africa, Costa Rica and Honduras.

### Grapefruit

Grapefruit shipments through the exchange totaled 423 cars, which is a reduction of approximately 100 cars as compared with that of the previous season. The crop was of better than usual quality as to shape, texture and thinness of rind, and shipments were made to eastern markets immediately following the clearing up of the Florida crop,—the good prices received being in part a reflection of the more continuous supply thus created. In western coast markets competition from Arizona and the Imperial Valley is increasing; on the other hand, in the larger eastern cities, there is every indication that the wholesale fruit trade is becoming more interested in good quality California grapefruit for sale during the summer months.

### Valencia Orange Crop

Included in the season's records are 401 carloads of the 1921 Valencia crop, which were shipped after November 1. They sold at high prices because of the lateness of the California Navel and the unsatisfactory keeping quality and immaturity of the early Florida shipments.

The first shipments of the 1922 Valencias followed the clean-up of the Navels. A few shipments went forward in March and the movement was quite heavy by April. The crop was estimated before the cold weather to be 12½ per cent greater than that of the previous season of maximum production, but due to the loss by the freeze and the extremely small sizes prevailing, the exchange shipments totaled only 9,273 cars as compared with 18,054 cars the preceding year, and represented but 46 per cent of the estimated crop.

### Next Year's Prospects

The cold weather of last January damaged the tender fruit wood on orange trees quite seriously in some sections, and this will be reflected in the crop for next season. The preliminary estimates of exchange shippers for the season 1922-23 indicate a production of about 75 per cent of a normal crop. It is expected that the trees will have fully recovered by the following year.

### The Lemon Crop

The estimate of January 1 indicated a crop for the season of nearly 15,000 cars,—an increase of 3,000 cars over the previous year and 6,000 cars over 1920. The estimated California crop was in excess of the combined supply of California and imported lemons in any previous year. The total supply of lemons in the United States in 1920-21 was 13,903 cars and the year before 13,251 cars. Two years ago, the California crop as a whole sold at a loss, and it was only the unusually hot summer in 1921 that allowed the average price for that season to be above the cost of production.

Because the principal lemon acreage is in the districts where the temperatures were not so severe and a larger proportion of it was protected by orchard heating devices, the lemon crop suffered less than the orange crop by the freeze in January. The fruit picked after the freeze amounted to 64 per cent of the quantity originally estimated to be picked from that date.

The prices on lemons, when compared with other years, were not materially affected by the freeze because, due to the increased crop, the shipments from California were greater after that time than in any other year, excepting 1919 and 1921, and the importations of Italian lemons were increased. However, it is questionable whether the entire crop, with the addition of normal imports, could have been marketed to advantage considering the high cost of its production.

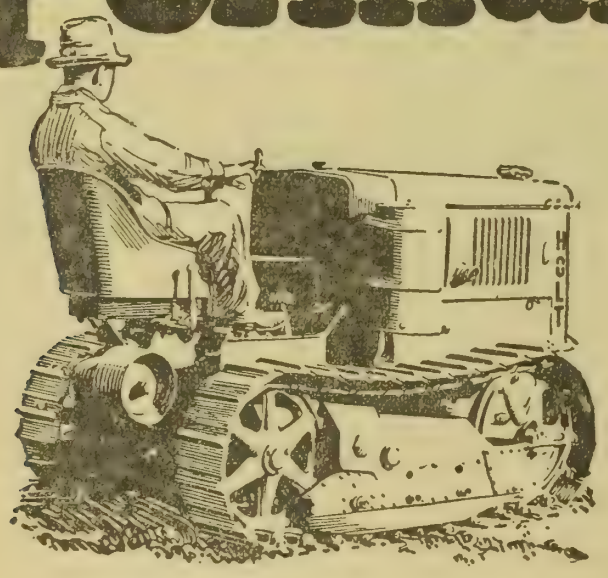
The importers of Italian lemons apparently overestimated the damage to the California crop, although the trade was advised by the exchange of actual conditions and its estimate of fruit to ship. Large quantities of lemons were imported—the total for the 12 months beginning November 1, 1921, equaling 3,372 carloads. This was 62 per cent in excess of last year's receipts of foreign lemons and 23 per cent above the average of the past four years. The importations during May, June and July amounted to 1,505 carloads, or 100 per cent increase over those of the same months in 1921. Foreign lemons were also imported into Canada in much larger quantities than usual, the fruit being shipped even into the far western provinces.

California shipped 9,926 cars of lemons, as reported by the railroads, during the year ended October 31, compared with 11,805 cars the preceding year and an average of 9,021 cars per year for the last five years.

The total supply of lemons this year, including importations, amounted to approximately 13,000 carloads, which

"CATERPILLAR" T-35 - THE SUPREME SMALL TRACTOR

Permanence



In little more than a year model T35 *"Caterpillar"* Tractor has established a permanent place for itself in the field of power equipment.

The many years of experience in tractor development and the long period of designing, refinement and testing that preceded the first announcement of the model T35 Tractor, a little more than a year ago, assured its success from the start.

But, though much was expected of this tractor, its actual performance in field service has surpassed the highest hopes. And the recognition, by power users, of its superior merit, has established for the T35 a permanent place in the field of power equipment and developed, in comparatively short time, a tremendous market. Increased demand has necessitated increased production, effecting economies that permitted a $375 reduction in price at the start of the second years' production.

If you have not yet heard the complete story of this "Supreme Small Tractor", let us tell you where you can see it at work, or send you literature descriptive of it, or of the larger sizes of the "Caterpillar" Tractor—the 5-ton, Western 10-ton, or 75-horsepower.

is only slightly below that of the past two years.

It is true, however, that except for the frost damage California would have produced this year considerably more lemons than the United States and Canada have ever consumed, and the most intensive work to further develop the markets and increase the per capita consumption is necessary to successfully market prospective future crops. Lemon trees are more susceptible to damage than orange trees due to their more vigorous growth in the winter months, and next season's production will be more seriously affected by the freeze of last January than in the case of oranges. Nevertheless, the prospects are for a greater quantity than was shipped this year, and the rapid recovery of the groves inidicates a production in 1924 of as large a crop as California has ever shipped and an increasing one thereafter.

**Exports—Water Transportation**

On account of the scarcity of fruit of suitable quality and sizes and the high prices prevailing in the United States, exchange shippers have not attempted to further develop the orange market this year in the United Kingdom and continental Europe. Transportation rates to Europe have been favorable and financial conditions in Great Britain have shown considerable improvement, but European prices on oranges from other countries have been so much below values in the United States that it was necessary to defer further efforts to establish our fruits in those markets. However, a fair volume of fruit has been exported to the Orient during the past season.

The movement to form an independent steamship company to transport California products through the canal to eastern seaboard markets, which was under consideration by the citrus industry, was postponed following the freeze.

During the season there were shipped to the Atlantic coast points, via the Panama Canal, 53,448 boxes of lemons. Because of the heavy importations of foreign lemons and the uncertainty of prices in Atlantic coast markets, there were no shipments by water after the month of March.

## SHORT COURSE IN FRUIT GROWING

The division of pomology of the University of California offers a week of instruction, December 4 to 9, in the growing of deciduous fruits. This is part of the farmers' short course given at the university farm, Davis. The work includes the essential practices for growing almonds, apples, apricots, cherries, peaches, pears, plums and prunes.

The lectures and practice periods will be under the direction of specialists who know the work and know how to teach it to others. Particular attention will be given to spraying, pollination and pruning. The week program is:

Monday, December 4.—8:00-10:30, registration. 10:30-12:00, lecture and demonstration: Fruiting Habits of Trees and How They Grow. 1:00-2:30, lecture: Principles of Pruning Young Trees. 2:30-4:00, demonstration: Pruning Young Trees in Experimental Orchards.

Tuesday.—8:00-12:00, lecture and demonstration: Pruning Young Trees in Experimental Orchards. 1:00-2:30, lecture: Principles of Pruning Bearing Trees. 2:30-4:00, demonstration: Pruning Bearing Trees in Experimental Orchards.

Wednesday.—8:00-10:00, lecture and conference period: Diseases and Insect Pest Control. 10:00-12:00, demonstration: Making and Mixing of Sprays, and Spray Machinery. 1:00-4:00, demonstration: Pruning Bearing Trees in Experimental Orchards.

Thursday.—8:00-10:00, General round table conference period. 10:00-12:00, field demonstration: Irrigation Practices. 1:00-4:00, pruning demonstrations: Almonds, Apricots, Peaches, near Winters.

Friday.—8:00-12:00, demonstrations: Pruning cherries, plums and other trees. 1:00-4:00, near Vacaville.

Saturday.—8:00-12:00, demonstrations: Pruning pear trees in the Sacramento. 1:00-4:00, River orchards.

One important feature is the general round table conference period when growers' special problems will be considered and discussed. A fee of $1.00 will be charged for the course at registration. To help provide transportation to the orchards in the Winters, Vacaville and Sacramento River districts growers are urged to bring their cars.

## MORE MONEY FOR ALMOND GROWERS

More money clinked into purses of members of the California Almond Growers Exchange last week with the completion of the exchange's second advance of three cents per pound upon Paper Shell varieties of 1922 crop almonds. This is the earliest second advance made by the exchange since 1919.

To date almond growers, who are members of the Exchange, have received a total of 15 cents per pound advance on Nonpariel, 14 on I. X. L. and 13 on Neplus. Recent reorganization of the almond growers cooperative on the basis of five year crop pooling agreements has enabled the exchange to make these unusually large advances because of the increased banking credit and financial stability afforded by the five year agreement.

Considering market conditions this year and the car shortage, the ability of the exchange to make the advances it has is considered by business men, farm cooperative executives and growers who are in touch with conditions an achievement of no mean proportions. The growers generally throughout the state are well pleased with the operation of the new pooling agreement which has made possible these advances.

## USES OF GYPSUM

A growing interest in the use of gypsum is manifest among the farmers of the San Fernando Valley, Los Angeles County. For the past two years fields of potatoes have been treated with gypsum, and so satisfactory have been the results that the county farm adviser states the amounts used last year will be doubled this year. Not only has its use stimulated the crop, but it has decidedly checked potato scab and given a cleaner smoother skin. The county of Los Angeles has been experimenting at its farm with the use of gypsum to neutralize or render harmless black alkali, with excellent results. In the same county several other plots have been treated with the same purpose in view and it now looks as if we shall have an increased use of gypsum. This is one use where lime cannot replace it. Gypsum may replace lime to flocculate clay and adobe soils and has a beneficial effect on the soil organisms in the nodules of leguminous plants. In this respect Prof. J. W. Nelson of the state college of agriculture says:

"Gypsum may be used with advantage on alfalfa fields to stimulate growth. This is especially to be remembered in connection with alfalfa fields of several years standing in which bare patches are found. An application of gypsum in such cases, not to exceed 300 or 400 pounds to the acre, along with fall disking, will usually stimulate the plants and rejuvenate the field. The reason for this is believed to be that gypsum is a stimulant to the alfalfa plant itself and to the nitrogen gathering bacteria that grow in the nodules on its roots."

## UNRIPE AVOCADOS SOLD

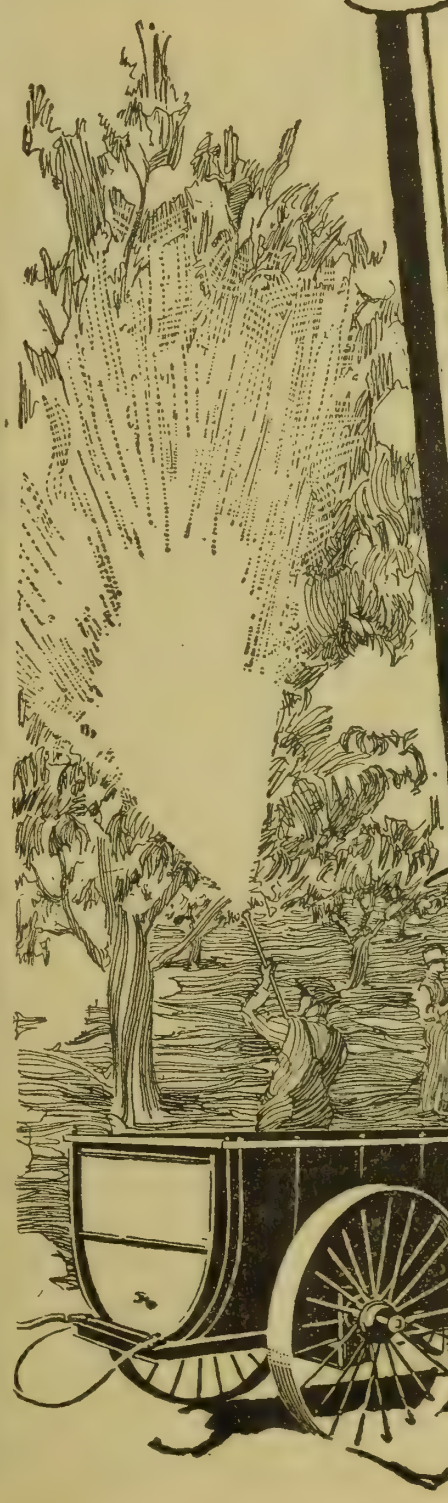
Members of the California Avocado Association are much wrought up over the appearance in the Los Angeles market of large quantities of absolutely green avocados—windfalls. Every autumn the strong winds bring down great numbers of avocados in all stages of growth. Some of those lately on the market weighed about four ounces, which at maturity should weigh eight or ten times as much.

## FOREIGN SEED INVASION

The New York agricultural experiment station is sending out warning to farmers against the use of foreign clover and alfalfa seed now being imported in large quantities. They state that invariably the use of this seed results in poor stands due to winter killing and disease.

They further advise the use of Western grown seed and say that growers should only purchase American seed that is guaranteed to be of Western origin.

This should be welcome news to the seed producers of the Western states as it gives some encouragement to an industry that has not fared any too well in the past.



New
Low Prices
on
"Bean" Sprayers

We announce reduced prices on all Bean Power Sprayers effective immediately. Increased demand and lowered cost of production make these new low prices possible. We also announce new and important improvements, which establish new standards for light weight, big capacity and economical operation. Send the coupon for full details.

# "OILINESS"~what it means to trucks & tractors

"'Oiliness' is the ability of a lubricating oil to cling evenly to bearing surfaces, at the same time offering in itself a minimum of frictional resistance."

— *Board of Lubrication Engineers.*

"Oiliness" in engine oil can't be seen — but is *felt* when your tractor steps into full-rated draw-bar pull — is *heard* when your truck engine hums along with heavy loads.

Zerolene has "oiliness." It clings to bearing surfaces evenly, and at the same time splashes freely — you get *all* the power the engine is rated to deliver.

## *Stability — Purity*

The ideal truck or tractor oil must penetrate easily the smallest bearing clearances at all operating temperatures — and it must have stability. Zerolene penetrates, and has the stability to resist engine heat.

The unexcelled purity of Zerolene results in a harmless deposit of carbon of a soft, flaky nature, most of which is blown out with the exhaust. Zerolene minimizes engine troubles and assures longer useful service for your equipment.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your truck, tractor or automobile.

## DECIDUOUS PRUNING RESULTS DURING THE 1922 SEASON

(Continued from Page 557)

the method as advocated. With these poor attempts at pruning just as poor results have been obtained with fruit quality. As a consequence the thinning system is being blamed for the poor quality fruit.

### Reasons for Poor Results

If it is true that the fruit growers have made a poor job of pruning what then are the various factors concerned in getting those poor results, and what means should be used to avoid them? In discussing that question it will be my purpose to consider each of the criticisms presented by growers with whom I have come in contact on the subject.

### Overbearing

The main cause for overbearing is not pruning enough. Many comparative tests have been made with deciduous fruit trees to determine the effects of severe cutting as compared with light pruning and no pruning. Practically every such test has shown by far a greater proportion of fruit buds when no pruning is practiced, a less amount with moderate pruning, and the least number with heavy pruning. With the extremely moderate pruning given by growers trying the thinning system, an enormous quantity of fruit buds was formed, especially in the tops of the trees and on hanging branches. With the great crop produced the trees were not able to mature and support the fruit. Overbearing is not a mysterious or difficult problem, but it can be easily handled by giving adequate pruning. There is more damage resulting from insufficient opening up rather than pruning too much.

### Small Fruit

By far the greater percentage of orchards this past season produced small fruit both on short and "long" pruned trees. That one factor cost the deciduous growers of California thousands of dollars just this season.

It is characteristic of most kinds of trees to produce more fruit buds than will set. The only solution in handling a full crop is to reduce the number of fruits. It requires more energy from the tree to produce two fruits than it does to produce one of their combined weight.

An illustration of the value of thinning apricots is given by an apricot orchard at Chatsworth owned by Wm. Parmentier in which the extension service has conducted a pruning demonstration plot for two years. Realizing that but few apricot growers were really practicing thinning of fruit where there was a full crop, trees in the pruning plot were thinned heavily and checked against trees not thinned. Splendid results were obtained where thinning was practiced as shown in the following chart. It is interesting to note that the "long" pruned trees produced larger fruit than the headed back trees. Any peach grower who has gone through this past season knows that thinning is a necessity. The essential thing to bear in mind is to thin enough.

### Apricot Thinning Results

Parmentier orchard 1922:

| System | Thinning | Fruits Per Lb. | Yield |
|---|---|---|---|
| Long | Terminal only | 12 | 290 |
| Headed | Clusters (⅛) | 14-15 | 240 |
| Long | ½ | 9-10 | 300 |
| None | None | 17-18 | 200 |

One benefit derived from thinning which is not often considered is its influence on regular bearing. When trees are allowed to produce a full crop so much energy is used that they are weakened and the following year a small crop is grown. With a small crop following a large one the trees have a chance to recuperate and a large crop is produced the next year. So an alternate bearing habit is acquired. Heavy thinning reduces the number of pits and permits more energy to be directed towards preparing for the next year's crop. It enable trees to bear regularly. No grower, whether of peaches or apricots, can afford not to thin his fruit.

Another important reason for failure of fruit to size sufficiently is that in many instances the trees become weakened by insufficient soil moisture. When soil moisture gets low the water is pumped out of the fruit into the leaves and their growth is checked. The detrimental effects from irrigation before a crop is harvested are largely from letting the moisture get low and then irrigating. Providing adequate moisture at all times will not result in poor quality fruit but will be just the opposite in its effects. Never let the soil moisture get low!

### Scabbed Fruit

There were two classes of scabbed or otherwise marred fruit during this past season,—apricot fog scab and mars from insects and fungus diseases. The statement has been made that the trees pruned by the "long" pruning system have been more subject to the apricot fog scab than those pruned by the heading back method. Careful observations have shown that there were many "long" pruned trees which were marred by fob scab, but in every instance it was either where the grower did not knock fruit from terminals of branches as recommended with this system or where the trees were going through the first year pruned "long" and had not yet clothed themselves with inside fruit wood. A long pole with a hose attached does a good job in knocking off such fruit. Such fruit is invariably of poor quality even though climatic conditions do not favor fog scab. It stays there at the expense of fruit below and it must be gotten rid of. Fog scab in most instances was the result of poor work rather than the fault of any system of pruning.

Fruit marring, caused by insects and diseases, can be controlled by standard sprays during the regular spraying seasons. It is merely a question of proper application, using the right materials at the right time.

### Breakage of Lmbs

One of the most serious complaints with the "long" system was that limbs broke down under weight of fruit. In most every such case breakage could have been avoided if proper attention were given to knocking fruit from the terminals and thinning and propping. Distribution of fruit has a great bear-

WOOLNER OIL CO.

2951 West Fourth St., Los Angeles, Cal.

ing on the ability of the tree to hold up a crop. If the major portion of the crop is well within the tree and low down, rather than in the top, there is not much danger from breakage. Another reason for breakage is that many trees pruned "long" in recent years were headed back previously, causing weak places. When the branches beyond the weak places became loaded the weight was too great and the limbs broke. Growers should bear in mind that no limb is stronger than its weakest place, therefore prune and thin accordingly.

Still another reason for breakage is where growers leave too many limbs in the tops, with the result that they never grow sufficiently in diameter to hold up a large crop. The "long" pruning system calls for five to six main leaders only. A few large limbs are better than many small ones.

### Fruit Inside and Within Reach

Some growers during this past season and in previous years have complained that they cannot get fruit spurs and fruit buds to form within the trees and low down. Such a result is due to insufficient opening up in the tops of the trees. It is only by means of sunlight coming in contact with dormant buds that bare limbs and branches can be made to produce fruit spurs and fruit buds. With the "long" system, when properly used most of the fruit can be picked from the ground after the second year.

### Heading Back Pruning Results

The discussion so far has been concerned mostly with poor results obtained from the "long" system. It might be well to consider what results were obtained from the old California heading back system. More fruit was set with the heading back system this year than in several years past. The conditions which favored fruit setting generally were also helping trees pruned by the heading back system to retain a large set. With apricots this heavy set resulted in large clusters of fruit being formed. Where proper thinning was not practiced this bunched fruit was small in size. With peaches heavy thinning was also required, and when not well thinned the fruit was just as poor as with treees pruned "long" and not thinned adequately. In examining both peach and apricot trees it was very evident that the fruit bearing area was restricted and but little fruit was produced within reach on older trees. In comparison with "long" pruned trees the tonnage was from one-third to one-half less with the heading back system as compared with those pruned "long." The average production for apricots in the San Fernando Valley with heading back system was under four tons per acre. No grower can continue on such a production basis with high land values.

Comparing the heading back system with the "long" system, where both were done at their best, no better quality of fruit was produced with the heading back system, and certainly the tonnage was less with it.

### Favorable Results with "Long" Pruning

For four years the agricultural extension service for Los Angeles County has been conducting pruning plots in the various deciduous fruit districts. In these plots both the heading back and the "long" pruning systems were used. Careful observations are made on the conduct of trees in these plots. In every instance where the cooperating grower had done his part in handling the other horticultural operations the "long" pruning system has given greater crops of good fruit than those headed back. Trees which carried crops of 250 to 350 pounds have produced first quality fruit in spite of the great crop. This has been true with both apricots and peaches.

There are many individual growers whose orchards have been observed over a period of years, who are making a success in producing large crops of good fruit with the "long" system of prunning, when other good horticultural operations are practiced.

The following chart shows per acre production results with four orchards. Excellent quality was obtained in spite of the high yields.

Long pruning results 1922:

| Orchard | Age | Yield Per Acre |
|---|---|---|
| C. B. Sexsmith, Owensmouth (apricots) | 9 | 10 tons |
| Mark Grimes, Van Nuys (apricots) | 6 | 8½ tons |
| Wm. Parmentier, Chatsworth (apricots) | 8 | 11 tons |
| M. R. Proctor, Van Nuys (peaches) | 5 | 7 tons |

Claude Gibbs, a commercial pruner and grower of Lankershim, tried "long" pruning on a small scale in his peach orchard two years ago. During this past fruit season Mr. Gibbs kept production records on the two systems, obtaining the following results.

Pruning results Gibbs orchard 1922:

| System | No. Trees | Boxes | % Increase |
|---|---|---|---|
| Headed back | 8 | 45 | ..... |
| Long one year | 8 | 52½ | 16.66 |
| Long two years | 8 | 61 | 35.5 |

Mr. Gibbs stated in his report to the extension service, "With me the "long" pruning has been highly satisfactory. We have better fruit than ever before, while most people complain of having poor fruit this year. We will get more than one-half again for our fruit than as if I had pruned the short system. Besides, I find easier sale for it as it is much bettter quality and a higher color. We find the picking also is much easier as well as faster, and when picking always

# How to Increase Fruit Crops With Less Work

*The new era of farming-profit, the era of Fordson Farming, offers every farmer bigger crops, larger profits, and time for pleasure doubled.*

FARMERS and fruit growers now recognize the opportunity to speed up work by using the fast-running Fordson in combination with the special orchard tools made to go with it. For the more thorough tillage insures better crops, while the faster work of the Fordson enables one man to care for more acres. Thus, both reduced expense and increased returns come with the adoption of Fordson Farming.

With his work now done in less time, the Fordson farmer's entire family is benefitted. There is more inclination toward pleasure; more time for those enjoyments to which everyone is entitled.

Naturally, the development of an orchard plow to work behind the Fordson tractor had much to do with making these important advantages available to fruit growers. The result of such development is the special Oliver Orchard Plow. Not only will it run close to trees and vines, but it is so made that it does not injure even the low hanging branches. With its three bottoms, a lot of ground can be covered in one day. And with the special design, thorough work is assured. The hitch allows for the plow to run to the left or to the right of the tractor, or directly behind it. Thus the soil may be thrown toward or away from the rows.

Possibility of tearing branches or barking tree trunks is removed by eliminating levers and setting the wheels within the cut of the bottoms. Crank screws take the place of levers and the power lift trip is below the level of the frame.

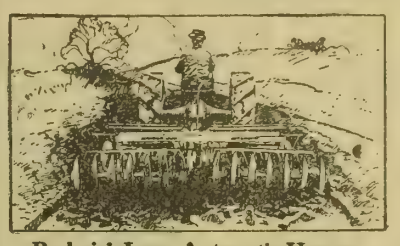
*The Special Oliver Orchard Plow*

Cover crops are easily turned under. The placing of the front furrow wheel gives plenty of clearance for heavy vegetation, and the shape of the bottom insures thorough pulverization of the furrow slice.

Sixty-five years of plow-building experience is your assurance of constant satisfaction with the special Oliver Orchard Plow.

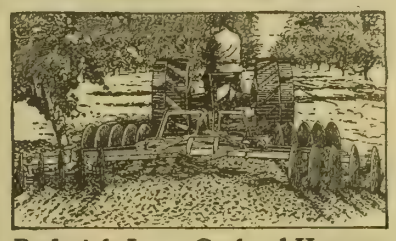
**The World Famous Oliver No. 7**
On thousands of farms, the world famous Oliver No. 7 has been the plowing partner of the Fordson from the beginning.

**Oliver Single Bottom Sulky**
For deep mouldboard plowing in trashy conditions with the Fordson. Similar in construction to world famous No. 7 gang.

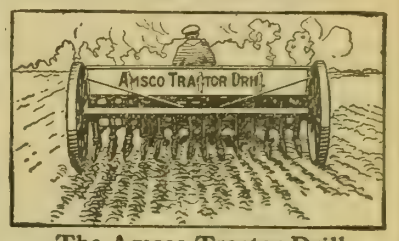


**Roderick Lean Automatic Harrow**
Fitting the seed bed the Fordson way with the Roderick Lean Automatic Tractor Disc—a special Fordson Harrow.

**Good Work With Roller Pulverizer**
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.



**Roderick Lean Orchard Harrow**
Orchard discing with Fordson speed with gangs set in or extended with the Roderick Lean Automatic Orchard Disc.



**The Amsco Tractor Drill**
Tractor speed and accuracy utilized by the Fordson owner with the Amsco special drill. Force feed makes positive planting.

**The Amsco Two-Row Cultivator**
Cultivating corn is easy for the Fordson farmer with the Amsco Cultivator—special for the Fordson. Made for hard work.

**Money-Maker Ensilage Cutter**
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

**The Money-Maker Hay Press**
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

**Wood Bros. Individual Thresher**
The Wood Individual Humming Bird Thresher and Fordson make short work of threshing. All grain is saved.

## Ford Dealers Everywhere Sell Standard Fordson Equipment

dread getting to the "short" system. I had some branches break but in every case they were poorly thinned. Only about one-half of my "short" system fruit came up to cannery specifications this year. Most people who complain pruned nearer by the "let alone" system than any other, thinking they were doing the "long" system.

Pruning of deciduous fruit trees is not a mysterious horticultural operation—it is not even difficult. But it does call for a knowledge of the fundamental principles of tree growth and fruit production. More damage can be occasioned by a poor job of pruning than can be made up for by good soil handling, irrigation and spraying. It should be given special attention rather than indifference by the grower.

The pruning of deciduous fruit trees is now under way. The pruning job was poorly done last season. It must be done better this season if the industry is to prosper. It will take merely the application of the best known practices to accomplish a good job.

# Questions and Answers

**Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.**

### Acacia Pycnantha

Please tell me about Acacia pycnantha, size and life of tree, bloom, etc.—Subscriber, Whittier.

Acacia pycnantha was introduced to California for the tannic acid content of its bark, but is now sparingly grown as an ornamental. It bears the largest, most beautiful blossoms of all acacias, but the tree will not grow or remain shapely even with severe pruning. It sometimes grows up to 50 feet high but is straggly and of poor shape, the lower limbs early dropping away. We do not recommend it for planting; there are several better acacias.

### Grapes Fail to Ripen

Some of my Thompson Seedless grapes do not make sugar. They are all first crop and good sized berries. I did not begin to pick until the 8th of September. Vines had good growth, no mildew and large crop of fruit.—Subscriber, Madera.

The complaint of raisin grapes failing to ripen uniformly has been quite a general one throughout the entire raisin district this season. Many reasons have been advanced but so far as we know there is no single cause for the trouble except the fact that the season was late. The trouble may be due to soil conditions or methods of applying water. It is possible that someone who has made a study of raisin production, such as your local farm adviser or horticultural commissioner or some one from the growers service department of the Sun-Maid Raisin Growers should visit your ranch and advise you regarding the probable cause.—F. K. H.

### Concords Not Resistant

Are Concord grapes on resistant root as prolific as on nonresistant root, and would you advise planting Concord on resistant root? They have proved heavy bearers in this locality on nonresistant root.—Subscriber Paradise.

While the Concord grape appears to be resistant in the East, we are informed by the U. S. department of agriculture that it does not appear to be in California, therefore, in planting this variety in districts known to be infested with phylloxera they should be grafted on resistant roots. Experiments by the U. S. department of agriculture indicate that they make a good union with the resistant root and that they are just as prolific as when planted on their their own roots. The writer does not know of the existence of phylloxera in the Paradise district and if on investigation you find that this insect is not prevalent in that district, there would appear to be no reason for planting grafted vines, as they are more expensive in every way. This same advice applies to the Delaware and Niagara varieties.—F. K. H.

### California Plums

Please tell me if the California Blue and the President Blue plums are good for Southern California. Also is the Duarte plum a good one to grow for market in the south?—Subscriber, Saticoy.

The two first mentioned plums we do not know nor are they listed in any California catalog we have. Nurserymen who were asked about them state they never heard the names before. The Duarte is a blood plum closely resembling the Satsuma and fruits about two weeks earlier. While a new plum it is steadily growing in popularity and last year sold readily as Satsuma before the real Satsuma was ripe.

### Strawberries and Peas

What is the best commercial strawberry to plant here and when? Also best peas, caulflower and cabbage to plant this month?—Subscriber, Fillmore.

There is no better strawberry for your section, so far as we know, than the Carolina. It may be planted earlier, but February is as good as any month. For years Yorkshire Hero has been the leading pea but of late the Stratagem and the Dwart Telephone are becoming more popular with gardeners who grow the best. As for cabbage and cauliflower we merely answer plant the kind or class you want. Every large dealer recommends varieties handled by himself alone, therefore all must be good. To name any might be interpreted as favoritism.

### Grapes and Guavas

I have a guava bush that does not bear at all. It is in healthy condition but bloom never sets. Tell me what to do with it. I also have a lot of grape vines on my arbor and they keep dying out. Tell me what can be the trouble with them.—Subscriber, San Fernando.

Possibly the guavas were too near a row of eucalyptus trees. We have a row of guavas near eucalyptus which serve an ornamental purpose, but for ten years have borne nothing. Guavas require water and rich soil. If we have not guessed right come again with more particulars. As to the grapes it may be the reverse—that is, too much water. Or it may be the mysterious "Anaheim Disease."

### Tariff on Eggs

We saw from the California Cultivator of October 7 that the new tariff on eggs is eight cents a dozen. Will you please tell us through the Cultivator what the tariff was before the new tariff went into effect?—Subscriber, Lanare.

Under former act there was no tariff on eggs.

### Spraying Apples

Please advise as to spraying Bellflower apples. The apples are wormy and knotty.—Subscriber.

Spraying for codling moth (the

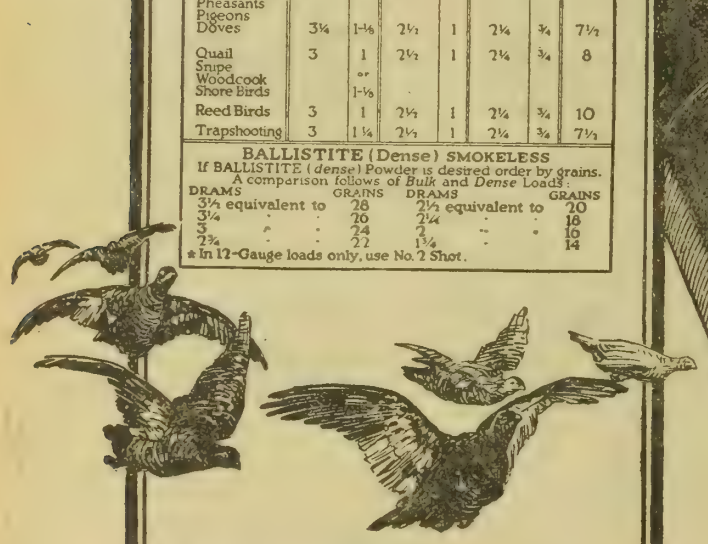
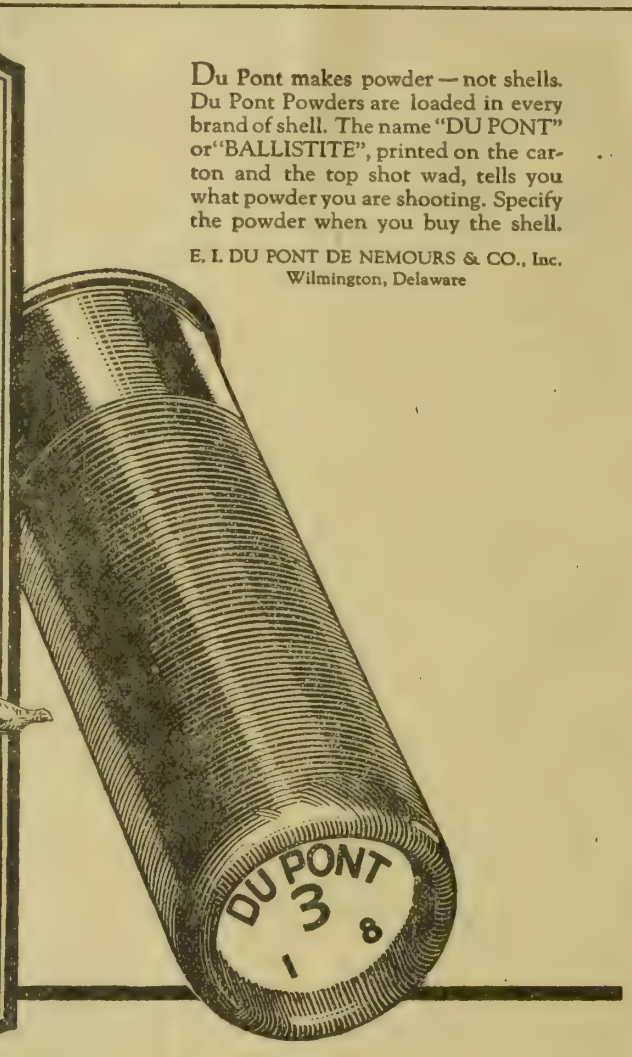
* In 12-Gauge loads only, use No. 2 Shot.



*When you do get the time for a few days' shooting, you want to make every shot count. If you select standard loads from the table above, you don't need to worry about your ammunition. A century of experience will be behind your trigger finger.*

Du Pont makes powder — not shells. Du Pont Powders are loaded in every brand of shell. The name "DU PONT" or "BALLISTITE", printed on the carton and the top shot wad, tells you what powder you are shooting. Specify the powder when you buy the shell.

E. I. DU PONT DE NEMOURS & CO., Inc.
Wilmington, Delaware



What every man wants in a shotgun powder is given him in "Du Pont" and "Ballistite" . . . . . that means confidence — and that means a full game bag. Is that not reason enough to look for the name on the carton and top shot wad?

SHOOT DU PONT POWDERS

DU PONT

cause of your apples being wormy) should be done in the spring. The first application should be made when the calyx cups are still open (when the petals are mostly off or within a few days thereafter). The spraying should be done with arsenate of lead, using four pounds of arsenate of lead paste or two pounds of arsenate of lead powder to 100 gallons of water. For effective work the spray should be applied by a power sprayer under 150 to 200 pounds pressure so that the solution will reach every part of the tree and fill every calyx cup. A second spraying should be given in about three weeks after the first, with a third application following in about four weeks. In the case of a single tree it would probably be more convenient to use the arsenate of lead in dust form, which can be applied under favorable weather conditions and is equally effective excepting where strong winds are too constant. Hand operated dusting machines with bellows of large caliper are especially suitable for this class of work. For more detailed information see articles in our issues of September 24, 1921, Page 317 and April 29, 1922, Page 458.

### Root Crops for Milk Production

What kind of root is most suitable as milk producer for dairy cows? When should it be planted, and about what tonnage would it yield on river bottom land?—Subscriber, Oroville.

Golden Tankard mangels and White Belgian carrots are the most satisfactory, but feeding them in quantity, while it increases the milk supply, decreases the butterfat per cent. Beets can be planted as soon as the ground gets warm enough to germinate the seed in four to six days, an average temperature of 48 to 54 degrees supplying this. The yield is from 15 to 20 tons per acre in good years.

### Waterproofing Concrete

What is the best way of waterproofing concrete reservoir, trough, etc?—Subscriber.

This is answered by A. L. Rosing of the Portland Cement Association:

"The best way to waterproof existing concrete structures is to give the interior surface a coat of waterproofing cement paint. This paint, which is applied like any other paint, would retain the original color of the concrete. Another good way is to give the inside surfaces an application of asphalt or tar, heated to 250 degrees. To be sure of a permanent job, especially if the structure leaks badly, strips of burlap should be applied to the surfaces immediately over the first application of tar, and this followed by another application of tar or asphalt. The objection to this method is, of course, that it makes the structure black on the inside. For smaller structures an economical way would be to give the surfaces an application of waterglass. While not as permanent as other forms of waterproofing, this method is very satisfactory for smaller structures. In all of these methods of treatment, it is necessary for the surface to be dry before the treatment is applied. The cracks and open construction joints should be chipped out near the surface and pointed up with good Portland cement mortar. In new structures waterproofness is obtained by using a 1:2:3 mixture with well graded aggregates and no more water than necessary to produce a workable mix. The concrete should be well spaded in the forms so as to remove air pockets and concreting should be continuous from top to bottom without construction joints. Reinforcement with wire mesh or steel rods is recommended for the tension side of the structure and should be around all the corners."

### Tomatoes and Pumpkins

How much earlier will tomatoes bear if transplanted and kept in paper pots? What value have pumpkins, cooked, as hog feed?—Subscriber, Mendocino.

We presume subscriber wishes to keep potted plants ready to set out when frosts are past. Experience teaches us that but little is gained in this way, and the practice is not followed by commercial growers. The value of pumpkins is not high and they are used more as an appetizer. The Vermont station found that two and a half tons of pumpkins were equal to one ton of corn silage. The composition of pumpkins is similar to that of turnips. Some authorities say pigs like the seeds best and no harm comes from feeding them.

### Nematodes and Wireworms

Would like to know if marine shell lime is as good as air slacked lime for soil, also how much sulphur to use to kill wire worms or nematodes. I have only a city lot. Nematodes killed zinnias, cosmos and other flowers.—Subscriber, Los Angeles.

Marine shell lime is fully as valuable for soil application as air slacked lime. We do not believe it of any use to treat soil with sulphur for nematodes or wireworms. How to get rid of nematodes is one of the chief problems of agriculture. With wireworms the case is less difficult but still a serious problem. Some use a poisoned bran as for grasshoppers. Others press boards on soil and as wireworms gather underneath the boards are removed and worms killed. Liming of soil will somewhat discourage them and frequent cultivation helps.

### Dwarf Shrubs

I wish to plant some evergreen shrubs to be trimmed to about two feet high. Soil is very sandy and our summer days range as high as 106 to 114 degrees. Very little frost but plenty of wind. Are any of the shrubs mentioned by Mr. Gould in issue of November 4 good for my wants?—Subscriber, Oilfields.

Two mentioned by Mr. Gould will thrive with you, Spanish broom and

ORCHARD BRAND SPRAY MATERIALS

## Seasonal Advice on Spraying

Suggestions for spraying your fruit trees at this time will be given you gladly by our entomologist, Mr. S. W. Foster. Just write to him. His advice is based on many years of practical experience along the Pacific Coast.

The formulas upon which Orchard Brand Spray Materials are based are also the result of first hand knowledge of Pacific Coast orchard conditions. This large company specializes in chemicals, operating modernly equipped factories where the highest grade raw materials are made into correct products of uniform quality. It is always ready and anxious to co-operate with ranchers.

Send for our free booklet on insecticides and fungicides, and for Bulletin No. 4 entitled, "The Dormant Spraying of Deciduous Fruit Trees."

### "PRAISE THE LORD!"

"Praise ye the Lord!" The psalm today
Still rises on our ears.
Borne from the hills of Boston bay
Through five times fifty years,
When Winthrop's fleet from Yarmouth crept
Out to the open main,
And through the widening waters swept,
In April sun and rain.
"Pray to the Lord with fervent lips,"
The leader shouted, "Pray;"
And prayer arose from all the ships
As faded Yarmouth bay.

They passed the Scilly Isles that day,
And May days came, and June,
And thrice upon the ocean lay
The full orb of the moon.
And as that day, on Yarmouth bay,
Ere England sunk from view,
While yet the ripping Solent lay
In April skies of blue.
"Pray to the Lord with fervent lips,"
Each morn was shouted, "pray;"
And prayer arose from all the ships,
As first in Yarmouth bay;

Blew warm the breeze o'er western seas,
Through Maytime morns, and June,
Till hailed these souls the Isles of Shoals,
Low 'neath the summer moon;
And as Cape Ann arose to view,
And Norman's Woe they passed,
The wood doves came the white mists through,
And circled round each mast.
"Pray to the Lord with fervent lips,"
Then called the leader, "Pray;"
And prayer arose from all the ships,
As first in Yarmouth bay.

Above the sea the hill tops fair—
God's towers—begin to rise,
And odors rare breathe through the air,
Like balms of Paradise.
Through burning skies the ospreys flew,
And near the pine cooled shores
Danced airy boat and thin canoe
To flash of sunlit oars.
"Pray to the Lord with fervent lips."
The leader shouted, "Pray;"
Then prayer arose, and all the ships
Sailed into Boston bay.

The white wings folded, anchors down,
The sea worn fleet in line,
Fair rose the hills where Boston town
Should rise from clouds of pine;
Fair was the harbor, summit walled,
And placid lay the sea.
"Praise ye the Lord," the leader called;
"Praise ye the Lord," spake he.
"Give thanks to God with fervent lips,
Give thanks to God today,"
The anthem rose from all the ships,
Safe moored in Boston bay.

"Praise ye the Lord!" Primeval woods
First heard the ancient song,
And summer hills and solitudes
The echoes rolled along.
The Red Cross flag of England blew
Above the fleet that day,
While Shawmut's triple peaks in view
In amber hazes lay.
"Praise ye the Lord with fervent lips,"
Praise ye the Lord today,"
The anthem rose from all the ships
Safe moored in Boston bay.

The Arabella leads the song—
The Mayfower sings below,
That erst the Pilgrims bore along
The Plymouth reefs of snow,
Oh! never be that psalm forgot
That rose o'er Boston bay,
When Winthrop sang, and Endicott,
And Saltonstall, that day;
"Praise ye the Lord with fervent lips,
Praise ye the Lord today;"
And praise arose from all the ships,
Like prayers in Yarmouth bay.

That psalm our fathers sang we sing,
That psalm of peace and wars.
While o'er our heads unfolds its wing
The flag of forty stars.
And while the nation finds a tongue
For nobler gifts to pray,
'Twill ever sing the song they sung
The first Thanksgiving day:
"Praise ye the Lord with fervent lips,
Praise ye the Lord today;"
So rose the song from all the ships,
Safe moored in Boston bay.

Our fathers' prayers have changed to psalms,
As David's treasures old
Turned, on the Temple's giant arms,
To lily work of gold.
Ho! vanished ships from Yarmouth's tide,
Ho! ships of Boston bay,
Your prayers have crossed the centuries wide
To this Thanksgiving day!
We pray to God with fervent lips,
We praise the Lord today,
As prayers arose from Yarmouth ships,
But psalms from Boston bay.
—Hezekiah Butterworth.

### WE THANK THEE, O FATHER!

We thank Thee, O Father, for all that is bright:
The gleam of the day and the stars of the night:
The flowers of our youth and the fruits of our prime
And the blessings that march down the pathway of time.

We thank Thee, O Father of all, for the power
Of aiding each other in life's darkest hour;
The generous heart and the bountiful hand,
And all the soul help that sad souls understand:

We thank Thee, O Father, for days yet to be,
For hopes that our future will call us to Thee;
Let all our eternity form through Thy love
One Thanksgiving Day in the mansions above.
—Will Carleton.

### STEENA'S AMERICAN THANKSGIVING

STEENA looked out of the window as she heard the sound of carriage wheels and her heart gave a sudden jump when she saw that it was Mrs. Kerry driving the black mare. Her quick blue eyes traveled over her blue house frock and white apron. Her hand traveled to her blonde hair, and felt for stray locks. There were none, so she hurried, almost ran, out to the horse block.

"Mornin', Mis' Kerry! I hope you ban well?" She smiled, speaking slowly, for, if she hurried her speech it was sure to be laughably ungrammatical and plentifully mixed with idioms of her native Sweden.

"Yes, I'm well," Mrs. Kerry's manner, always positive and abrupt, was this morning more so than ever.

"I should tie him the horse and you get out?" suggested the girl.

"No, I've got something to say to you and I can say it right here. It's about my boy, George."

Steena's face lighted at the mention of George's name. Her smile was illuminating and revealing. She waited for Mrs. Kerry to speak.

"Do you love him?" Mrs. Kerry asked quickly. "That is, is there anything between you two? I'm his mother, you know, and I have to protect him."

The girl was puzzled but the smile did not fade.

"I—sure—well, I'm what you call crazy over him!" She tried to be gay. "He don't talk marriage with me yet but I know—I know," and she laughed.

"But you can't marry him," Mrs. Kerry fairly exploded. "He must have a wife whom he'd never be ashamed of. It isn't now that counts in life. At your age, one tumbles into love and out again, with no harm done. Later, when you get——"

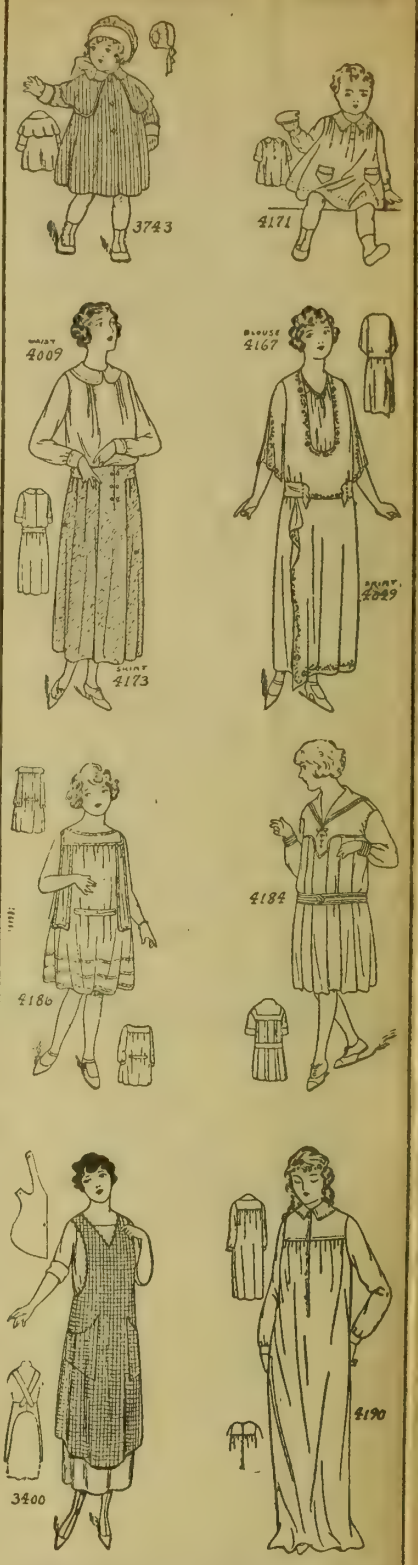
"You mean—I'm not good for George?" the girl broke in, a slight catch in her voice.

For the fraction of a second Mrs. Kerry hesitated. Then she spoke slowly.

"I guess that's what I mean. You see, George will be a rich man some day. He's well educated and he's going to be great, I hope. And he couldn't have a wife who can't even speak the English language, who doesn't know anything about America or American ways. You're very pretty, Steena Briby, but—you'd better marry some fine Swedish boy." Then, after a minute of painful silence, "Surely, you understand that you're not the type of woman that George should marry?"

The color slowly had left Steena's cheeks and she was standing very erect, motionless, almost like the figure of a martyr awaiting sentence. What thought might be evolving in her brain found no outward revelation in her face, Mrs. Kerry saw the lack

## The Cultivator Patterns



**3743. Child's Coat and Cap**—Cut in 4 Sizes: 6 months, 1 year 2 and 4 years. A 2 year size will require 2½ yards of 27 inch material for the coat and ¾ yard for the cap. Price 10 cents.

**4009-4173. Ladies' Costume.**—Waist 4009 cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 3¼ yards of 32 inch material. Skirt 4173 cut in 6 Sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. Its width at the foot is 2¾ yards. Two separate patterns 10 cents for each pattern.

**4186. Girls' Dress.**—Cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size with sleeves, requires 4 yards of 32 inch material. Without sleeves ⅝ yard less is required. Price 10 cents.

**3400. An "Easy to Make" Apron.**—Cut in 4 Sizes: Small, Medium, Large and Extra Large. A Medium Size will require 2¾ yards of 27 inch material. Price 10 cents.

**4171. Child's Dress.**—Cut in 4 Sizes: 1, 2, 4 and 5 years. A 2 year size requires 2¼ yards of 32 inch material. Price 10 cents.

**4167-4049. Ladies Costume**—Blouse 4167 cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Skirt 4049 cut in 7 sizes: 25, 27, 29, 31, 33, 35, and 37 inches waist measure. The width at the foot is 2½ yards. To make the dress for a medium size will require 6½ yards of one material 40 inches wide. Two separate patterns 10 cents for each pattern.

**4184. Girls' Dress.**—Cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3½ yards of 44 inch material. Price 10 cents.

**4190. Ladies Night Dress.**—Cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 4¾ yards of 36 inch material. Price 10 cents.

**CATALOGUE NOTICE**

Send 12c in silver or stamps for our Up To Date Fall and Winter 1922 Catalogue. This is even better than the Spring and Summer number. It will have 8 colored plates, the same as the last catalogue, but a great many of the other pages will be arranged in plate form, so that the Fall and Winter Catalogue will be more like a fashion book than a pattern catalogue. It will also include points for the needle and hints for the home dressmaker.

**PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH**

**HOW TO ORDER PATTERNS**

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are filled in NEW YORK. Do not expect patterns under Two Weeks from date of order.

PATTERN DEPARTMENT
California Cultivator Los Angeles

of emotion and was secretly relieved, for she thought that it meant that Steena did not love George to such an extent that she would not be willing to give him up.

"I—I guess I think over what you say—now I got bread in the oven," Steena said finally and without comment, walked quickly towards the house. Mrs. Kerry watched her until she disappeared through the kitchen door and then turned her horse toward home.

Alone in the big white kitchen the girl did not weep. She was far too deeply wounded for that. Instead, she went to the oven, glanced at the baking bread, and seeing it would be several minutes before the big fragrant loaves could be taken from their pans, she dropped to a chair by the window.

One of her first thoughts was that she was glad to be alone. Cousin Anna, a distant relative of her father's, who was really the housekeeper, had gone to town for supplies. Her father and brother were in the fields helping the farm hands gather the largest wheat crop in the history of their ownership of the farm. Yes, she was glad to be alone, for that meant that her slow thinking but by no means stupid brain could thoroughly consider the situation that faced her.

For minutes she sat there, thinking, thinking. Then, mechanically she removed the bread from the oven and as mechanically she went back to the window and reviewed Mrs. Kerry's words. And the tragedy, which grew in magnitude as she pondered, was that Mrs. Kerry was right. She was not good enough for George!

Ten years before, when Steena was barely twelve, she had stood on the deck of an ocean liner and watched the bewildering sky line of the land that was to be hers by adoption. Her mother had been dead for several months and her father, a tall raw-boned man, unhappy from the loss of woman who had been the love of his life, had decided that in America lay solace. Steena's brother Ole, then a sturdy lad of 16, and Anna, the distant cousin who had taken her place as housekeeper to the motherless brood, had accompanied them.

Steena liked the new land. So had they all. And they had prospered. Back in Sweden, Steena's father had been a mechanic by trade but he had owned a little patch of land outside the city and had tilled the earth as a physical relaxation from his work. So he was land wise.

The family made at once for the great wide West. While Steena's father was learning something of the country of his adoption, they lived in Minneapolis but with the coming of spring there were frequent excursions into the country and finally they moved onto a farm in the heart of the wheat country. At first, Olaf Briby served as a "hand" but before long was promoted to a position akin to that of superintendent. A year later he paid the first installment on the farm of his own.

Steena loved the place from her first glimpse of the long low farm house and the big barns beyond. On the way down the road from the small town where they had left the train, she had seen a dozen large farmsteads which showed care and comfort even approaching luxury. The girl had dreamed that their home would not be so vastly different and, to her delight, thanks to industry and native refinement, her dream had almost become a reality.

Even now, in her moment of anguish, she felt a thrill of pride that while she herself might not be all that was desirable, her home was not a place of which anyone might be ashamed. It was small compared with the big Kerry farm house half a mile up the road, but it was well kept, there was a generous lawn and trim hedges of flowers and shrubbery. She rose from her painful brooding and walked to the door and out, across the grass, turning to look back at the house and the outbuildings beyond. The picture was complete. Inside and out, Olaf Briby had made his home comfortable, modern, handsome. It was a splendid example of an American farm homestead!

American farm homestead! The phrase came to Steena's mind, because she had heard the woman from the home bureau mention it. A thought flashed to her; the Briby household had not kept pace with the Briby home! They had built up a fine type of American farm homestead but what poor examples of Americans they were! She pondered over this for many minutes, and when she started back to the kitchen, her face wore a smile as when the sun peers through the clouds.

That night, when George Kerry drove his car up to the horse block in the Briby garden, Steena went quickly out to meet him.

"Hello peaches and cream!" He had nicknamed Steena after her complexion. "Let's go to town and get some ice cream."

"No—I no go tonight," she said gravely. "Goodnight!" and she walked away.

It was the same the next night and for many nights. She would not go with him, would not talk to him, would not explain, so presently he stopped calling, a fact which his mother noted with satisfaction. But down in his heart of hearts he did not stop caring. After all, youth does not always tumble into love and out again with no harm done.

Autumn came and winter. At Christmas time, Mrs. Kerry suggested to her son that they take a trip South. She had heard and read much of Florida and wished to see it. The trip held little of keen enjoyment. George watched the gayeties but refused to take any part and in a month they were home again. The first day, Mrs. Maguire, the Kerry's hired helper, told her mistress that Steena Briby and her brother were away,—in Minneapolis, she thought, or possibly, Chicago. Mrs. Kerry acknowledged the news with a nod but made no comment. She was not entirely satisfied with her action in separating the lovers but, after all, she argued, the girl most certainly was not the right type of wife for George.

Spring came again and with it the heavy routine of out of door work. Ole Briby came back but it was summer before his sister appeared again about the grounds of the low white farm house. Mrs. Kerry saw her one afternoon as she drove by and bowed and smiled. Steena's greeting was quietly cordial and Mrs. Kerry thought what a fine figure of a girl she was and how becoming was the simple dress she wore.

Mrs. Kerry watched her son very carefully the first few weeks but there was no sign that the old friendship was renewed. So the months wore on. Gracefully, the spirit of summer lifted her flowery skirts and departed, allowing vividly dressed autumn to stalk across the fields.

In October, Mrs. Kerry told her son that they had been invited to spend Thanksgiving with cousins in Chicago. It was more or less a family reunion. George agreed mechanically and a week before the holiday they departed. Steena saw them go and the little set smile, that she had worn when Mrs. Kerry told her she was not "good enough," still lingered on her lips.

On the morning that the Kerrys reached Chicago a telegram was waiting for them and George read it before his mother had removed her hat. It was from Mrs. Maguire:

Fire in hen and tool house, barns scorched—not much damage.

He handed the telegram to his mother. She had managed the farm since the death of his father twelve years before, and was quite capable of rising to the present climax. She read it carefully twice, and, without comment, removed her hat and turned to greet waiting friends.

After luncheon, however, her composure seemed less secure. She began to wonder just how badly the barns were "scorched" and if there had been any real damage to the stored crops. George had been secretly wondering the same thing for hours but had matched his mother's silence. When she spoke, however, he said flatly that he would be a lot happier if he were at home.

The night train bore them back and and on Thanksgiving Day, a dully heavy morning with a lowering sky that threatened snow, they were motoring farmward to hear Mrs. Maguire's story.

(Continued Next Week)

# How much sleep do you need?

IT ISN'T so much a question of the number of hours you spend in bed, as it is of the *quality* of the sleep you get. Is your sleep sound and restful, or is it fitful and unrefreshing?

One common cause of wakefulness at night is over-stimulation from coffee drinking. For coffee contains caffeine which irritates the nerves and frequently leads to insomnia.

If you have any idea that coffee keeps you awake at night, or makes you nervous, make a change from coffee to delicious Postum.

This pure cereal beverage contains nothing that can harm health, and its flavor is much like coffee. In fact, many people prefer Postum for its flavor alone.

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes. The two forms are equally delicious; and the cost is only about ½c per cup.

Postum *for Health*

## HOUSEHOLD QUERIES

### Repainting Old Walls

We are going to try to paint kitchen and bathroom ourselves and want both done in washable paint. The bath room had enamel on it but the kitchen was only plastered and kalsomined. How can we clean walls before painting and what kind of paint? Please tell us as much as you can about it for it is our first attempt and we are relying on the Cultivator to help us out.—Subscriber, Santa Maria.

For the kitchen first: All dirt and dust must be carefully brushed off. If walls are sooty and greasy, wash the soiled surface with a solution of borax and water. Old kalsomine should be scraped and washed off with warm water. Be careful to remove every particle of the cracked or crumbling coating. Wall paper should be removed and surface of wall carefully washed with warm water and sandpapered smooth and dusted off. Putty smooth all cracks and indentations with putty made by mixing plaster of Paris with washable wall finish which you may obtain from your paint dealer. When dry, sandpaper to a smooth even surface. Apply a sizing coat composed of equal parts of stopping liquid and washable wall finish. Sizing coat should be flowed on, well brushed and laid off smooth. Allow 24 hours to thoroughly harden, then apply a good flowing coat of the selected shade of wall finish. Brush out evenly. Some wall surfaces may require two coats.

For the enamelled walls in bathroom: Wash off all grease and soot with a solution of borax and water. Rinse clean with clear water. When surface is dry, cut down and remove the old gloss finish with No. 0 sandpaper and dust clean. Putty all wall imperfections with plaster of Paris putty. Apply a sizing coat composed of one pint raw linseed oil and one gallon washable wall finish. Sizing coat should be flowed on, well brushed out and laid off smooth. Apply two coats washable wall finish. Allow at least 24 hours between coats.

For handling the old woodwork, wash off all grease, dirt, etc., with borax and water. Rinse surface clean with clear water. Wood should be sandpapered to a very smooth, even surface. Fill all indentations with pure linseed oil putty. When surface is dry, apply a priming coat of flatted lead. Allow 24 hours to harden. Then finish with one or more coats of wall finish. Follow specified directions.

One gallon will cover about 300 square feet, two coats.

And when you have the walls and woodwork all spick and span, you will look at the old floors and say: "We've got to tackle those next." If you can, buy good inlaid linoleum and have it cemented on. If a cheaper finish of oil or paint is necessary, let us know if we can help out on suggestions.

### Cleaning Silk Sweaters

Please tell me how to clean silk—or rather fiber silk—sweater. I had a very pretty one and washed it in good soap suds, thinking it would be all right, but it is pulled out of shape so that I couldn't press it back to look like anything. Have I spoiled it or is there a chance of making it look right again? Would it do any good to put it in gasoline now?—Subscriber, Pomona.

The most satisfactory way we have found for washing fiber silk—or wool either—is to put a small amount of warm water in bowl, just as much as will thoroughly wet the sweater. Add an equal amount of benzine or refined gasoline—benzine is best. Sop up and down, rub gently. If there are any bad spots pour a little of the clear benzine directly on them, let stand a second, then rub gently. Press water gently out of sweater—don't wring—spread on folded sheet or Turkish towel in the air—in the sun if it is not so bright that it will fade your sweater. By the way have the sweater turned wrongside out to minimize danger of fading. If it is a wool sweater it has probably stretched lengthwise; if fiber, crosswise. Place shoulder seams evenly at top and pull into shape carefully, keeping bottom edges evenly together and straight and flat. Pull sleeves down to proper length, holding at armseye with one hand and pulling and stretching along the length of the sleeve with the other. Turn the garment frequently, repeating the stretching and shaping process. Pay special attention to the pockets—the tops are sure to sag and stretch if you don't pat and persuade them to dry flat and smooth.

All this takes some time and care but it pays well, for it gives you a garment like new, retaining the silky luster of the new sweater. It will not be necessary or advisable to press at all with hot iron, except perhaps carefully along wrongside of bottom hem, on shoulder seams, neck and pocket. This depends on the fabric and weave. A rough weave of heavy thread should need no "ironing," but a slip-over of fine knitted fabric probably will.

Never, under and circumstances, hang up sweater to dry even on padded hanger. If it is one of the rare ones that doesn't stretch it may be kept on padded hanger when dry, but it is better to fold carefully and lay flat in box when not in use. A box is much better than a drawer for if other garments are laid on top it will muss and wrinkle.

A sweater which has hung and stretched so that you are sure it must have the seams taken in an inch or so to make it wearable will often pull itself back into shape by being laid away flat in box for a time. If not, dipping in benzine and water or plain warm water as recommended above and pulling into shape while damp will generally obviate necessity of taking up seams.

Our inquirer can restore her sweater to good looks easily by following suggestions above.

Another hint: If sweater has been worn and washed many times so that pockets pull and sag quite hopelessly, take them off, that is, if the other part of the garment has not faded. Many of the slipovers this winter have no pockets so you will be quite in style.

## HINTS FROM HOUSEKEEPERS

### "Easy Way" Jam

Mrs. E. M. Lane calls our attention to typographical error in recipe which she furnished for Cultivator of November 11, Page 515:

"In 'Easy Way' jam recipe it says: 'Select firm fruit, mash, let drain, etc.' It should be, 'select fruit, wash, let all water drain off them, mash and measure, etc. as directed before.' Will you kindly correct it as the jam would be no good unless the juice of berries was used to thicken the sugar. Many would notice the mistake and do it right, but others would not know and it's for those I wish you would kindly make an item in the household department correcting the word."

What Experience Taught Me in the Growing of ALFALFA, How I Turned Failure Into SUCCESS!

J.M. BOMBERGER
Pres. BOMBERGER SEED COMPANY

DURING MY FIRST FIVE OR SIX YEARS of dairying I was only fairly successful. I had a hard time making ends meet financially.

I HAPPENED TO TRY OUT fourteen different kinds of alfalfa planted in rows and I watched their growth.

AFTER THAT I planted the kinds that produced the most and best hay under California climatic and soil conditions.

THE RESULT WAS that I averaged, year after year, about twice as much hay per acre as I grew the first five years.

DURING THE FOLLOWING TEN YEARS I kept about twice as many cows on the same land and never bought a pound of hay.

GROWING LOTS OF GOOD DAIRY ALFALFA Cheaply helped me so much that I considered it (next to well bred cattle) the very foundation of profitable dairying.

MY FOURTEEN TRIAL ROWS SHOWED that imported alfalfa seed is not adapted to California conditions and produces poorly.

That some of the Southern Alfalfas yield heavily but have a tendency toward coarseness and are not so long-lived as the Northern alfalfas.

That the Utah and other Northern alfalfas are long-lived, but yield too little hay under California conditions.

EVERYTHING CONSIDERED the best alfalfa that I have grown is the MODOCK common alfalfa.

It is neither a Southern nor a Northern alfalfa, but seems to combine the best qualities of each under California conditions.

It endures the hardships that are incidental to irrigation better than any other alfalfa.

TEN TONS OF HAY PER ACRE per season is not unusual with MODOCK alfalfa.

I REASONED LIKE THIS: When I plant alfalfa seed, I expect at least fifty crops of hay from the one seeding and those fifty crops will depend largely upon the kind of seed I plant.

CAREFUL SELECTION OF ALFALFA SEED more than any other one thing turned my dairying from hard work and worry to an interesting, pleasant and profitable dairy.

SOME OF MY NEIGHBORS asked me to purchase alfalfa seed for them and by 1916 I found myself in the alfalfa seed business.

WE HAVE NOW MADE IT POSSIBLE for every retail dealer in California to sell MODOCK seed.

SINCE WE HAVE BEEN telling about MODOCK alfalfa, a few dealers have been trying to sell alfalfa seed for MODOCK that was not MODOCK seed at all.

FOR THAT REASON we started last year to sell the MODOCK alfalfa seed in a trade-marked bag like this.

TO AVOID DISAPPOINTMENT make very sure that the MODOCK alfalfa seed which you buy is in the trade-marked MODOCK bag.

WELL BRED ALFALFA SEED is the foundation of a heavy producing alfalfa field just as WELL BRED DAIRY CATTLE are the foundation of a heavy producing dairy herd.

Write for our circular which states fully how each kind of alfalfa behaves under California conditions.

## PEARS, PRUNES, APRICOTS CONVENE

(Continued from Page 555)

the control. However, "Spray two weeks before buds open. The critical time is always before the trees bloom." Dry dusting is effective, in fact, little difference has been found between dry and wet sprays. Dusting was declared to be rather more expensive, but possibly more of use at times when the orchard would not permit entrance of big loads of liquid sprays. Commissioner Cody called attention to the fact, that best results from dust sprays called for temperatures of 60 degrees or higher.

The real kick of the convention was felt when Professor Veihmeyer gave data from experiments which have been carried on at the decidious fruit experiment station at Mountain View. Professor Veihmeyer riddled old time ideas of cultivation as a means of saving moisture in the soil. He insists that there is no capillary movement of soil moisture, that water will not move upward in soil as does oil in the wick of a lamp. "The dust mulch is of no value in preventing evaporation." "Cultivation is of no value whatever in retaining moisture." Professor Veihmeyer did suggest that cultivation after iirrigation is necessary in order to introduce in the soil sufficient air or oxygen that beneficial bacteria are permitted to work.

"The greater part of the water goes where the irrigator puts it and stays there until removed by plants." The fruit growers were perhaps nearly equally divided between those who concluded: "We have long been believing some things not true." "We do not believe some things told us today are true." Dr. Leroy Anderson, formerly dean of the farm school at Davis, and one who has been in close contact with the experiments performed at Mountain View discussed the address of Professor Veihmeyer. This discussion will be given in a later issue.

Controller R. G. Sproul of the University of California occupied the platform at the Tuesday evening session and extended most cordial greeting to the fruit growers. "No other state of the Union, no other section of the world can show a gathering of such representative men engaged in a productive industry as can California. No other state shows the great value in annual production. No other section shows such wonderful increase in total value. No other branch of agriculture gives to California so much of prosperity as does the fruit industry —unless possibly it is the livestock industry. You are a type of people who stand for progress and the university has striven to aid you in advancing your industry by learning as to improved methods and practices and also as to best methods of disposal of products once they are produced. You must still produce more and better, marketing methods must be improved, and consumption still more increased."

Director Hecke of the state department of agriculture referred to the work of his department, to the wonderful increase in responsibility and to the fact that when he took charge of the work the horticultural commission had a total appropriation of only $60,000. That was but slightly increased until the 1919 consolidation of various bureaus under the one department head. Another consolidation or enlargement of the activities of the department came in 1921 with the bringing in of other bureaus under the one general head.

Opportunity for securing a fund of information as to the activities of the state department of agriculture will be given at the state convention which will be held in Sacramento, December 12-14.

The apricot folks spent nearly a day in discussing sour sap. The discussion was led off by Prof. Ralph E. Smith who referred to the opinion often held by many as to this particular disease. He spoke feelingly of one orchardist who came to him with information that his trees were dying and, after referring to the gumming and souring of the sap as indicated by the ooze from the bark, asked: "Is anything wrong with the trees or are they simply dying because of sour sap." There seems to be no short cut to cure of sour sap. It is one of the problems which involves so many angles that study of conditions of each orchard, even of each tree, is necessary to determine causes and remedy. The trouble may be caused by drouth, by oversupply of moisture, by too hot or too cold weather, or various other exterior conditions. Partial immunity may be secured by always having soil conditions such that the tree is able to resist diseases through its thrift and vigor.

From the discussion, which was more or less extended, my impression is that allowing the soil about the roots to become too dry in late summer or early fall is the most common cause of this perplexing trouble. The tree is deprived of its opportunity to manufacture starch because the leaves are prematurely shed while they still contain much of the material which should be elaborated into starch and deposited in the tissues of the plant. Then it is possible the warm and moist January causes this prematurely dormant tree to start growth which must necessarily be insufficient to give the tree vigor. Succeeding cold nights cause partial dormancy which creates conditions such as but few trees can withstand.

The appearance of the "disease" may be delayed till spring time while the cultural conditions which caused it may have occurred in September and October. Give every tree in the orchard sufficient water to keep up proper growing conditions after the fruit is off or during August, September and October.

Then there was long pruning. The canners to a man are "a'gin it." The growers, most of them, seem to be for it. Many of them maintain that by the short pruning larger, finer fruit is possible, that is, unless the long pruner does vigorous thinning. But many a grower insisted that the canner and dryer did not pay a big enough premium to justify the growing of the larger fruit. It is generally admitted that the long pruning resulted in smaller fruit but a far greater tonnage.

Then there was discussion of brown rot and various other apricot problems.

The next day the bottlers convened and discussed food value of carbonated beverages, likewise syrups, and such questions as will doubtless result in a far greater use of California fruits of a grade which may be in lesser demand in the market in the form of beverages and confections.

Perhaps the most interesting event of the week was the fruit show placed by agricultural college students. It filled half a dozen large rooms and while it was made up largely of California fruits there were exhibits from the experiment stations of a score of other states. There were nearly 500 plates of apples, in fact, almost one entire room was given up to their display. Pears also were in force, as were both almonds and walnuts. The display of grapes was not so extensive, but many of the newer varieties were exhibited. The judging was done by student judging teams. The only awards, however, were of blue ribbons and diplomas.

In order to encourage further investigation and to secure fullest information as to successful plants now operating it was suggested that a committee be appointed to report at the next conference of fruit growers. The committee named consisted of H. C. Dunlap, San Jose, chairman; A. W. Christie, Davis, secretary; W. F. Yerxa, H. Wheatley, R. M. Kingman.

# NITRATE OF LIME

TRADE MARK

GROWERS!

To Secure Better Set, and to Secure Better Fruit Use Nitrate of Lime.

## It Pays to Use NITRATE OF LIME Because:

It contains 13% nitrogen, equivalent to 15.8% ammonia,

**in the most available form**

It does not contain any ingredients detrimental to soil or plant life—on the contrary it supplies the soil with about 30% soluble lime, which is a valuable adjunct to the nitrogen.

It is quick acting as it absorbs moisture and dissolves completely.

**Nitrate of Lime** is packed in strong wooden barrels to prevent waste and caking.

Write for booklet—free—giving complete information and telling how **Nitrate of Lime** is produced.

## Livestock News Notes

At the recent national dairy show a new class was instituted called the get of sire production class in which a bull and 5 A. R. daughters are shown. First prize in the Guernsey breed went to D. D. Tenny of Crystal Bay, Minnesota, on Ladysmith's Cherub. The five daughters shown with this bull average 673.4 pounds butter fat, and it is claimed that this group has the highest average butter fat production of any five daughters of any bull of any breed ever led into a show ring. One of the cows in the group was the grand champion of the show and first prize cow in the A. R. class for a cow with record begun under five years of age. Her record is 638.96 pounds fat in the CC class.

Evelyn of Herodale, the beautiful Guernsey cow recently purchased by W. H. Dupee of Riverside, has dropped a bull calf sired by a son of Governor of the Chene and has been started on a year's test. Her first test shows that she is making a little over 2½ pounds fat a day.

Fred Hartsook's great show herd set a record that will probably stand for some time by winning 112 blue ribbons and 37 championships in eight shows, as well as numerous smaller prizes. Also this is probably the first time that a big herd has been taken over the complete circuit, winning more than enough money to pay all expenses.

Announcement has been made that San Francisco will at once build a show pavilion to house the California National Livestock show and other expositions and conventions. Such a move will solve many of the difficulties heretofore prevailing and should assure a big show for next year.

The recent arrival of 72 Holsteins brought out from the Middle West by Roy Bratzler for the Glenwood Stock Farm at Riverside brings the total of that herd up to over 200 animals. They are milking over 80 cows and heifers with one of the newest type of machines and having exceptional success with it. Instead of damaging the udders it has benefited a number of them.

An increase in the great volume of business done by Rhoades and Rhoades compelled their removel to a new location where more room is available and after December 1, or possibly sooner, they will be located at 2119 South Main Street, Los Angeles. Ten sales this week makes it one of the heaviest weeks in the history of the firm.

The state herd prize of $500 offered at the Pacific International by the Holstein-Friesian Association of America was won by the breeders from Washington. Oregon won the $300 second prize and Idaho took the $250 offered for third.

At the recent meeting of the Southwestern Berkshire Congress arrangements were made for and committees appointed to conduct a series of Berkshire pork demonstrations at the local and northern fairs next year. The congress will donate a gold watch to the school boy or girl writing the best essay entitled "What a housewife should know about pork." The rules for this contest will be announced later. It was also decided to hold a consignment sale of bred sows and gilts in February.

The famous Pacific coast champion, Hollywood Lilith Palmyra Abbekerk, owned by the Los Angeles county farm has qualified in the 305 day class by calving again on October 21, 1922, or just 13½ months from her last freshening. This ratifies her senior four year old record of 22,245.1 pounds milk containing 982.97 pounds butter in ten months, this record being made following the birth of twin calves. These figures for milk and butter have only been exceeded by one other cow under the new rules which require second calving within 14 months. This cow is now on official test and has already completed seven days with a butter production of over 35 pounds. She is now milking at the rate of 120 pounds per day and is expected to increase her butter record. Her young son by King Korndyke Pontiac Mead will be retained for junior herd sire at the county farm. His seven nearest dams average over 1000 pounds butter in yearly test, including four records made in heifer form, and his dam's record in 305 days only. In seven day test the seven nearest dams average 31.71 pounds butter. He combines the blood lines of the greatest producers in Holstein history being particularly strong in his heritage from King Segis, Pontiac Korndyke, Hengerveld De Kol and the famous California foundation cow, De Kol of Valley Mead.

### A COOPERATIVE MILK PLANT

Those interested in the establishment of cooperative milk marketing plants as well as those already engaged in marketing milk cooperatively will find many of their problems handled exhaustively in Department Bulletin 1095, Producers' Cooperative Milk Distributing Plants, just published by the United States department of agriculture. The bulletin, consisting of more than 40 pages, is based upon studies of the experience of a large number of plants of this type in various parts of the country, mostly in small cities where a satisfactory system of distribution was not previously developed. Details are given on contracts, financing, organization, by-laws, location and equipment of plants, investment, management, sales methods, distribution costs, and accounting systems.

Lists are given of equipment needed for small plants with less than 250 gallons capacity, for plants to handle from 250 to 1,000 gallons, and for large plants handling more than 1,000 gallons a day. Figures obtained from 27 cooperative plants show that the average investment in the plant itself per gallon capacity is $25.97 when the capacity is 500 gallons or less; $22.77 when the capacity is from 500 to 1,000 gallons; $11.69 when the capacity is 1,000 to 2,000 gallons; and $19.14 when the capacity is from 2,000 to 8,000 gallons. In the same order, the investtments per gallon capacity in equipment were $28.73, $31.79, $11.89, and $12.34. Estimates are given of the total amounts of money needed to establish and operate plants of these various capacities.

The three principal problems that confront the milk plant manager are, according to the bulletin, the securing of an adequate and proper milk supply, efficient and economical plant operation, and sales policies and methods of market distribution.

### PIG SURVEY TO COVER WHOLE COUNTRY

The second semi-annual pig survey, cards for which are now being distributed to rural mail carriers, will cover the entire country, the United States department of agriculture has announced. The survey last spring covered only 17 states, but as an indication of present and probable pig production it was a great success and readily demonstrated the feasibility of extending the scope of the inquiry.

Ten cards or questionnaires will be distributed by each rural mail carrier on agricultural routes. Approximately 50,000 cards will be sent out. They have been prepared in simple form and can be filled out in a few minutes. Where possible, the mail carriers will fill in the answers as made by the hog raisers. The cards will show the number of sows farrowed during the last six months of 1921, the number farrowed during the first six months of 1922, the number of sows farrowed. or due to farrow during the last six months of 1922, and the number bred or intended to be bred to farrow during the first six months of 1923. Numbers of hogs which died from hog cholera or other diseases during 1921 and 1922 will be shown, as well as the number of pigs saved per litter.

The importance of this survey to the farmers in enabling them to adjust their production to the probable needs of the market is stressed by the department. People who deal in crops and livestock, such as packers and

commission men have very extensive organizations for informing themselves of the production of crops and livestock, the department points out. "Farmers have no such organization of their own, and obviously information of this character is just as important to the farmers as to the people who deal in farm products. One of the functions of government is to gather and publish these necessary statistics in order that the producers may have some knowledge of what is going on in the way of production."

### AMERICAN ABERDEEN-ANGUS ASSOCIATION

The 39th annual meeting of the American Aberdeen-Angus Breeders' Association will be held at Chicago, Wednesday, December 6, 1922. The enrollment of new members this year as compared with 1921 shows an increase of 66 per cent which is probably the most encouraging feature of this year's business. A total of 6,158 memberships have been issued and it seems reasonable to predict it will only be a few years until it will reach 10,000.—Chas. Gray, secretary.

### DAIRY SURVEY OF IMPERIAL

Seventy-three silos have been constructed in Imperial Valley, although only two-thirds of them are in use. The herds have 377 registered bulls, and American dairymen outnumber those of foreign nationality two to one, with 47 per cent of the whole, owners of their own farms. These are some of the statistics secured by Assistant Farm Adviser De Tar in survey recently completed.

### LIME AND PHOSPHORUS ARE VITAL TO DAIRY ANIMAL

Lime and phosphorus, although they are found in relatively small quantities in feeds, have a great deal to do with milk production and building up the body of the unborn calf. If the cow does not have enough of these elements in her ration she will draw on the supply in her body for a time, and heavy producers commonly do this. Therefore, says the United States department of agriculture, it is a good practice to feed cows well when they are running low in milk yield and when they are dry, so that they store up these elements as well as others in their bodies for use when the large demand is made.

The common view is that dry cows need only enough feed for maintenance, but experiments carried on by the department show that this is not true. The cow is a milk manufacturing plant, and, like many factories, she must have a reserve supply of materials to draw on when heavy demands are made. A cow that has been well fed when dry and has stored up this reserce is able to produce more on full feed than a cow that was given only a maintenance ration during that resting period. In this way a cow can utilize her capacity the year round although she may not be giving milk all the time.

In keeping up the necessary lime and phosphorus supply it is well to keep in mind the fact that certain feeds are richer than others in these elements. The feeds which contain the most lime are the legume hays, which include cowpea, alfalfa, soy bean, the clovers, and some others. Of these mentioned cowpea hay contains the most lime, and the others are named here in the order of their richness in lime. The lime content of hay depends to a great extent on its quality. Leafy alfalfa hay contains more lime than coarse, stemmy hay, and the same is probably true of other hays.

The common dairy feeds that contain the most phosphorus are wheat bran, cottonseed meal, standard wheat middlings, and linseed meal, in the order given. Less common feeds that are high in phosphorus are, in order, sesame oil cake, rice polish, buckwheat middlings, rice bran, sunflower seed cake, rapeseed cake, buckwheat bran, and malt sprouts.

No grain or other concentrate contains anywhere near so much lime as the legume hays; and no kind of roughage contains phosphorus in quantities comparable to those found in the concentrates mentioned above. Grass hays, corn silage, and corn products are low in both lime and phosphorus.

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.

*Include*

DR. HESS STOCK TONIC
*in the ration*

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

*I spent 30 years in perfecting this Tonic.*

of the Season

50 Registered Holstein Females
F. L. Hogue, Modesto, Cal., Tuesday, Dec. 5, at 10 A. M.

Mr. Hogue will sell to the highest bidder in this sale the very tops of his herd, including every female of milking age that is in actually desirable sale condition.

EVERY ANIMAL IN THIS OFFERING HAS PASSED THREE CONSECUTIVE TUBERCULIN TESTS, IS SOLD SUBJECT TO RETEST BY THE BUYER, AND IS POSITIVELY GUARANTEED TO BE A BREEDER.

The sale list contains a large number of splendid individuals, exceptionally well bred, and many with large 7, 305, or 365 day records, including EVA COLANTHA HUBBAVALE, the new state record junior 3 year old butter producer in the 305 day division.

PRACTICALLY ALL OF THE BRED FEMALES ARE IN CALF TO A BULL WHOSE DAM MADE OVER 1,150 LBS. BUTTER FROM OVER 29,000 LBS. MILK, AND WHOSE SIRE'S THREE NEAREST DAMS ARE ALL 1,000 LB. COWS.

TERMS OF SALE: California Breeders Sales and Pedigree Co. will extend terms of one-third cash, balance in 3, 6 and 9 months to responsible parties who make arrangements before sale. If you want credit, and deserve it, don't be afraid to ask for it.

PLACE OF SALE: The F. L. Hogue farm, seven miles north of Modesto on Escalon Road. Headquarters of sale will be Hotel Hughson, Modesto.

# Dairy Products Show

During the year ending June 30, 1922, California produced 105,446,108 pounds butterfat; 48,850,212 gallons pasteurized market milk; 24,701,699 gallons raw milk; 8,963,820 gallons cream; 7,139,267 gallons ice cream; 74,010,176 pounds butter; 8,574,736 pounds cheese; 98,050,065 pounds evaporated milk.

The wholesale value of California's manufactured dairy products was nearly a hundred million dollars or, to be exact $97,125,398.

The past few years have shown wonderful development and great increase of production. They have shown even more wonderful advancement in quality of manufactures.

Partly to celebrate this great advancement and partly for trade reasons there was held all of last week in the city of Fresno the Second Annual Pacific Slope Dairy Products show. Each one of the six days given up to this show found opportunity for gathering in convention of milk products manufacturers, associations of milk distributors and others whose whole interest has to do with the dairy industry. The first of these associations to meet during the week was the California and Southwestern States Ice Cream Manufacturers. Others were State Milk Distributors Association, conference of state dairy inspectors, California Dairy Council, California Creamery Operators Association.

So far as the Dairy Products Show was concerned it was certainly an eye-opener to dairy people and others of the San Joaquin Valley. As a matter of contrast one room in the great auditorium was given up to equipment of other days. In this room there were the old time milk racks filled with shallow pans, tanks for the tall milk setting cans which were to be surrounded with ice water, old time churns, though unfortunately none of the good old dash churns and butter working equipment, all of which helped to make outstanding the nickel plated and highly polished dairy and creamery equipment of today. In this modern equipment there were ice cream freezers built somewhat like a 16 inch gun. There were milking machines, separators, ice machines, milk bottles and capping machines, and of course there was dispensed at all times the latest in milk drinks.

The appreciation of its management by those interested in the success of the show is best evidenced by an event of Dairy Council Day. Manager C. L. Roadhouse was called to the platform and the magnificent work he had done in staging the show and opening it practically ready for business at the announced time was referred to and appreciation of his work expressed by handing to him a beautifully jeweled gold watch in token of the esteem of his fellow workers.

The work of the Dairy Council was praised on every hand. Sam H. Greene is the livewire of that organization as well as secretary and manager. Mr. Greene gave tribute to his helpers in the educational work which is being conducted. The most recent to become connected with the work of the council is Robert Jones, formerly with

## Barren Cows Can Be Made Profitable

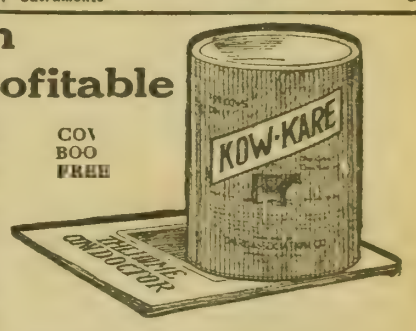
Don't send them to the butcher. They can be made to raise calves and produce milk in paying quantity. Barrenness simply means that the cow's genital organs are too weak to function properly.

Kow-Kare, the great cow medicine, acts directly on these organs and the digestion, correcting the serious disorder. D. B. Thomas, Knightville, Utah, writes us:

"I had a valuable Jersey cow eight years old that had had seven calves. Something went wrong with her after her last calf came, so that for two years she failed to become with calf. Fed her some of your Kow-Kare last Jan. and she was all right the first serving, and long before I had given her the whole package of your Kow-Kare that I purchased."

Mrs. Harvey Ray, Homer, Ill., writes: "The registered Shorthorn cow I wrote you about last year, and which I treated for Barrenness, under your directions, dropped a fine Bull calf Jan. 2nd. Less than one can of Kow-Kare did the work."

Hundreds of others tell us every year of making valuable producers from cows that seemed hopelessly barren.



Kow-Kare is equally valuable in treating Abortion, Retained Afterbirth, Scouring, Bunches. Milk Fever and Lost Appetite. Thousands of dairymen use Kow-Kare one week each month to keep up the milk yield during the winter months.

Let us mail you, free, our valuable 82-page book. "The Home Cow Doctor." Kow-Kare is sold by feed dealers, general stores and druggists. We will send either the $1.25 or 65c size prepaid if your dealer is not supplied.

# Poultry Queries

**(Conducted by Jean A. Koethen)**

### Lime for Turkeys

I have been feeding my turkeys unslacked lime, making it into a moist paste, then drying and feeding. Is there any danger of feeding it too strong, and how should it be slaked, and is there danger of feeding too much?—Subscriber, Oroville.

I have never heard of feeding lime to turkeys and cannot imagine any reason for it. If you keep your birds supplied with grit and shell, feed plenty of greens and a good, substantial ration of bran and barley if the birds are young, or laying mash and mixed grain if they are breeders, they have all they need. As you do not say how old they are I cannot indicate the precise ration.

### Sex of Geese

Please tell me how to distinguish sex of geese.—Subscriber, Anaheim.

Only a minute examination by an expert can distinguish sex in geese before they mature. In general the gander is heavier, has a coarser, harsher voice, and uses it more. He is the belligerent sex. It is said that if a flock of young geese is confined in a pen with a dog the females will try to run away, but the ganders will stretch their necks and hiss.

### Lice and Mites

Please tell me how to rid my hens of lice and mites, which are very troublesome in this climate. I have been advised against dipping because it spoils the hens for the table, and dusting is not satisfactory.—Subscriber, Yuma, Arizona.

Dipping would not permanently ruin your hens for the table, but it should be done only in warm weather and is not generally recommended. Have you tried dusting thoroughly with sodium fluoride? It is recommended by the department of agriculture and seems to give good results. You will have to dust thoroughly twice in order to get the lice which hatch after the first dusting. Another treatment recommended by experiment stations is with blue ointment. Buy a small jar of blue ointment from your druggist and mix with equal quantity petroleum jelly or white vaseline. A bit of this mixture the size of a pea is enough for each hen. Take it on the end of your finger and rub around the vent where the lice congregate. It should be handled with care because it is poisonous. There is another treatment which is absolutely sure to rid a hen of lice, and that is a good greasing with lard, but it will make her look dirty and draggled for a long time. So much for lice. Mites must be hunted in the house and not on the hens. They live in cracks in the wall, under the ends of roosts and in the bottoms of nests under the litter, and come out at night or when the hens are sitting quietly on the nests, to suck their blood. There are a number of prepared insecticides that will keep mites out, if they are used regularly. Carbolineum and the cresol preparations are among these. If you prefer to mix your own insecticide, use crude oil or kerosene and crude carbolic acid, making the mixture one part carbolic acid to five or six of oil or kerosene. In many cases a far weaker solution is sufficient, but if your houses are already infested with these pests you will need a strong mixture and will have to use it once a week. You can spray any of these preparations upon walls and roosts, or you can paint them on with a brush, which in my opinion is the more efficient method. Remember, you must get your insecticide into the cracks and wherever the pests can hide.

### Depluming Scabies

For some time I have noticed a sort of sloughing off on the droppings boards from my young stock, of which I send a sample. It seems to be composed of bits of feather and scales, and I am told it may be the depluming mites's work. I am a novice and would appreciate your opinion.—Subscriber, Escondido.

The sample is undoubtedly bits of eaten-off feathers and epidermal scales, indicating that the feather mite or depluming scabies has been at work. These mites yield easily to treatment. You can use any one of the following, rubbing on the body wherever you see stumps of feathers or the epidermal scales which have been left: Oil of caraway ointment (1 part caraway to 5 of vaseline.) Or balsam of Peru. Or creolin, (1 part creolin to 10 of water.) Or the following mixture recommended by Dr. Salmon: Flowers of sulphur, 1 dram, carbonate of potash, 20 grains, lard or vaseline, ½ ounce. Or 1 dram creolin, 2 ounces glycerine, ½ ounce alcohol, ½ ounce water.

Any one of these treatments should be repeated every four or five days till the disease is cured.

### Lettuce for Chickens

In this section a great deal of lettuce is grown and other green feed is scarce at present. I have been using it, along with stock beets and lawn clippings, and have seen no bad results, but have been told it may be detrimental. Is this true?—Subscriber, Gardena.

Lettuce is the least desirable of all greens for chickens because it is about 95 per cent water and only .90 per cent ash, but it is better than no greens at all. Using it with other greens you are not likely to see bad results. I have been told that lettuce sometimes makes little chicks "dopy," but do not know whether this is true or not. Certainly it should not be used when alfalfa, kale, chard or barley is available. A great many poultrymen depend for their winter supply of green feed on barley.

### Weak Legs

My young turkeys, hatched in May and June, are now getting weak legs and twisted knee joints. Feet finally turn out and legs spread apart until they can hardly balance themselves. The birds eat well and weigh heavy. They were raised in a big field of alfalfa, have grit and bone meal before them constantly, about all the corn they want and I feed a mash and quite often a bucket of clabbered milk, also wheat and sprouted barley during the hot weather. They sleep in the open and have the run of 12 acres of alfalfa.—Subscriber, San Joaquin.

Your birds are too heavy for their legs. If you will run over their bill of fare you will see that practically all the grain they have had is feed that makes fat, rather than muscle or frame. Corn is the worst of all feeds for growing stock, and bran is the best. If you will keep a box of bran constantly before them and feed wheat and rolled barley instead of corn, I think you will soon see a difference, though you may have to limit their ration for awhile. You can mix a little bone meal in the bran.

### Sick Hen

A valuable Rhode Island Red pullet has had bowel trouble since I purchased her two months ago. I feed her a well balanced ration of mash, scratch and greens and at different times remedies. Now she seems to have a scab that forms over the vent and droppings collect and have a very bad odor. What do you advise?—Subscriber, Wilmar.

I feel very sure from the description of the disease that this hen has vent gleet, the one venereal disease of poultry. Isolate her from the rest of the flock and be very careful to wash your hands thoroughly after handling her. Here is the treatment outlined by Wright for this disease: "Any hen found with it should be isolated and

## Turn Stump Land Into Money

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

# HEAVY LAYING S. C. WHITE LEGHORNS

Our birds won First and tied for Third at the Southern California Farm Bureau Egg Laying Contest at Pomona. Our Pullet No. 392 is leading the new contest which started October 1st, laying 27 eggs for the month of October and winning against four hundred and seventy pullets of California's most noted laying strains.

We bred and raised all the pullets we entered in this contest and have been breeding Leghorns for a number of years. Our birds have made splendid records in our own trapnests but we believe only records made in public competition should be mentioned.

In order to increase egg production, you must breed from males out of high producing parent stock. We can sell you cocks or cockerels that will improve your flock. Hatching eggs and baby chicks for sale in season. Address:

## D. Lotus Seed

Dated China, Oct. 20, 1922.

"Dear Mr. Kelsey:

"This is not an answer to your letter of Sept. 15 but just a note to say that the outlook is most encouraging to get your seeds (D. Lotus) from a very reliable source. It is a difficult matter collecting wild fruits in China but we have made connection with a missionary who has collected for U. S. Dept. and will take a personal interest in it. Sincerely yours, etc."

**The Best Costs No More. Write for Prices**

**FRED W. KELSEY**
**209 So Rosemead El Monte, Cal.**

If not well after two or three weeks we would kill the bird, as the disease is not quite free from danger; for if the operator should touch his eyes accidentally before he has cleansed his hands, the result might be a most violent inflamation." If the hen had this trouble when you bought her, she should be returned to her former owner. She will never be fit for a breeder and is a menace to the health of the rest of the pen.

### Roupy Hen

One of our hens had a swelling on the front of her throat. We found it was loose and squeezed out a cheesy substance as large as a small walnut. Her throat is still sore and has some of this cheesy stuff clinging to it. How shall we treat it?—Subscriber, Redlands.

You can swab her throat with peroxide of hydrogen, half strength, or with silver nitrate. When you have cleaned out as much of the cheesy substance as possible, spray twice a day with this solution: Extract of witch hazel, 4 tablespoons; liquid carbolic acid, 3 drops; water, 2 tablespoons.

### POULTRY SHOW AT DELANO

The Northern Kern and Southern Tulare Commercial Poultry Show will hold its second annual at Delano, December 15 and 16. The slogan of the show is "Birds Judged for Utility." There will be a special department for children where they can exhibit birds, pigeons rabbits and other pets. Premiums will be offered in this department also.

### SOUTHERN CALIFORNIA RABBIT SHOW

The rabbit breeders of Southern California are jubilant over the success of the largest rabbit show held in that part of the state, in connection with the Los Angeles County Fair held at Pomona, October 17-21.

There were nearly 500 rabbits and at least 15 varieties. Competition was especially strong in the Red, New Zealand, Fancy and utility classes. Flemish Giants, weighing almost 20 pounds were an especial attraction.

Most of the entries were from the state, several were from as far as San Francisco, although one entry was from Kansas City, Missouri. J. F. Hooten, over 70 years of age, near the Nevada line in the Sierra, carried five American Blue rabbits on pack horse for 50 miles to the nearest express station in order to enter them in the show and had the pleasure of receiving a blue ribbon in the baby doe class and a few other ribbons for his effort. His rabbits were not only high grade animals but were in excellent condition. The Ontario-Upland Rabbit Association, which was largely responsible for the success of the show just passed, has 135 members and represents a working force of at least 3000 does, producing between 4000 and 6000 meat rabbits each month, and is the largest organization of its kind in the country. Excellent care was given the rabbits by Mr. Goodro, a veteran in the rabbit game.

That the Los Angeles County Fair to be held in Pomona each year, will be the place for the annual rabbit show of Southern California has been virtually decided by those in charge of the show, and it is expected that next year there will be entries from many breeders in different sections of the United States.—Wm. A. Bixler.

### NO CHANCE LEFT

"I think he must be a hopeless failure."

"Hopeless? Has he tried many things."

"Everything. Even to the writing of moving picture scenarios."

"And failed at that?"

"Absolutely."

"It does seem that there is nothing left for him."

### DEADLY OVERDOSE

"What experience did you have with the roach poison I sold you last week?"

"Not so good, not so good. All the roaches did well on it, and I think are looking better, except one. He liked it so well he made a durned pig of himself and foundered. I'm afraid I'm going to lose him."—Philadelphia Retail Ledger.

# STRIKES!

**The Farmer *Always* Gets Stung**

The recent railroad and miners' strike is estimated to have cost the farmers in California, alone, $25,000,000.

How much has it cost you? Will yet cost you?

No matter who wins in a capital and labor fight, the farmer has to pay—and pay big.

How can these conflicts be stopped? How can the farmer be protected from having to foot the bill every time? Governor Allen, of Kansas, has developed a remedy. A number of other prominent men have been studying all phases of the way this industrial situation is grinding down the farmer.

What they think they tell you in vigorous fashion *in the next thirteen issues* of THE COUNTRY GENTLEMAN.

Every strike you can help prevent puts money in your pocket. Get behind this movement to abolish strikes.

## Why Can't You Make More Money, Too!

Harry R. O'Brien traveled 3200 miles, asking "dirt" farmers what makes them the most money.

What crop is most profitable in your locality? What enterprise? Are your methods right?

Is it good business to take on an additional enterprise?

O'Brien knows what will coin the most money. He got his information from successful farmers who have dug through these problems and whose proof is their bank balance.

Read what he says—*in the next 13 issues of* THE COUNTRY GENTLEMAN.

One item, one bit of fact, may mean the difference next year between an ordinary profit and a *big* profit for you.

## How Much Do You Pay for Liquor?

Whether or not you buy any, you're paying for it. Investigation shows that 90 per cent of the farmers are dry.

The farmers voted for Prohibition because rum interferes with the successful operation of their farms.

The present slipshod handling of the rum question is costing the farmer money.

How can rum-running and bootlegging be stopped, once and for all?

THE COUNTRY GENTLEMAN is publishing a remarkable series of articles showing what is happening and what can be done. Included is a stirring article by JAMES R. HOWARD, President of the American Farm Federation, on the farmers' attitude toward Prohibition.

These articles *in the next 13 issues* furnish the best answer to the fake "straw votes" with which we are being flooded.

## 13 Issues for Only 25 Cents

We will send you the next 13 issues of THE COUNTRY GENTLEMAN, containing these and many other important features, for only 25 cents.

THE COUNTRY GENTLEMAN is a practical "dirt" farmer's magazine.

It emphasizes the *business* end of farming, shows you constantly in hundreds of different ways how you can make more money out of farming in your section of the country. 40 pages, each week, packed with meaty, sound *help*.

Mail this coupon with 25 cents—coin, check, money order or stamps—we take the risk.

Your first issue, mailed promptly, will be worth to you more than the whole amount.

*Only 25 cents.* Mail the coupon *now* while you are thinking about it.

*THE COUNTRY GENTLEMAN*
338 Independence Square, Philadelphia, Pa.

Here's my 25 cents. Send me *THE COUNTRY GENTLEMAN* for thirteen issues beginning at once.

### LIVESTOCK

Weekly livestock market summary, Tuesday, November 21, 1922, furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles.

Cattle: Receipts of strictly fat cattle have been light at the Los Angeles Union Stockyards, bulk of the supply consisting of common and medium stock. There was ready outlet for virtually all grades. Beef cows sold relatively high with steers.

Good steers found sufficient favor from buyers to exact a premium, as was evidenced when 8.25 was paid for two cars of strictly good Idahos, with a car of 11 5 pound Montana bullocks at 8.00. Several loads of medium to good beeves cleared from 7.25 to 7.80, these coming largely from Colorado, Idaho, Utah, Wyoming and California. Plain steers from Texas and Arizona often went around 6.00 to 6.75, with trashy stock on the Mexican order as low as 4.35 to 5.25.

Good beef cows and heifers were in active demand and often appeared relatively high. Good 705 pound heifers from Imperial Valley scored 6.50 with others at 6.10. Bulk of fat cows sold from 5.25 to 5.85, with common kinds, largely from Arizona and Texas, at 4.00 to 4.50, and canners and cutters as low as 2.00 to 3.50. Bologna bulls were active at 3.25 to 4.00.

There was good inquiry for feeders. A string of exceptional Wyoming feeders cleared to a California buyer at 6.75 and good 978 pound feeders brought 6.25. Some Arizona feeders went out at 5.25 to 5.50.

Calves: Sorted light veal calves sold as high as 8.25 to 9.00, but bulk of Arizona and Texas 225 to 275 pound averages sold from 7.00 to 7.50, some common 317 pounders as low as 6.00.

Hogs: Prices on hogs have declined but are still relatively high in comparison with Eastern prices. On early trading days this week, mixed loads, carrying both light and heavy porkers, went at 10.00, with uniform 180 to 200 pound averages quotable up to 10.50. Good heavy sows went at 8.50 to 9.00, with 14 pound sows and stags at 6.00.

Sheep and Lambs: No choice lambs have arrived since the opening of the yards. A Los Angeles house bought a string of good to choice Idaho lambs, f. o. b. shipping point, at 11.50. Good and choice light lambs are conservatively quoted at 13.25 to 13.75 at the yards.—Nelson R. Crow, local representative.

### POTATOES AND ONIONS

These are the actual prices obtained between 7 and 8 o'clock, November 21, by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

### HONEY

Northern California—Bees being moved into almond and prune orchards for winter. Fruit growers offering high as 1.50 per colony for pollinating bloom. Star Thistle honey generally sold at 8 cents some 9 cents per pound. For dark honey beekeepers asking 6 cents. Brisk demand for 5 and 10 pound pails.

### BEANS

Selling prices per cwt. choice recleaned California beans in carloads f. o. b. California common shipping points:

| | |
|---|---|
| Large White | 6.20 |
| Small White | 6.20 |
| Mexican Red | 5.75 |
| Red Kidney | 7.35 |
| Henderson Bush Lima | 9.60 |
| Cranberry | 7.65 |
| Blackeye | 5.45 |
| Pink | 6.45 |
| Bayo | 7.50 |

### HAY AND FEEDSTUFF

Under date of November 18, A. W. Scott Co. says:

Export and coast shipping have continued steady and in liberal volume and would have been greater, except for difficulty in obtaining freight space. All shipping is limited now by shortage of necessary ship tonnage. Interior trading has been doing better during the week as roads and country conditions have permitted movement after the rain. Alfalfa continues dull and inactive. Dairymen appear to be feeling very severe conditions of low prices for their output and the extravagant cost of production.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.

## Citrus Markets

Los Angeles, November 22, 1922.

Northern California Navels are selling in Los Angeles around 7.00 and 8.00 for best grade stock. Eastern Navel sales are not yet reported. Picking in northern and central sections of the state is proceeding and another week will give indication of the favor with which they are received in the Eastern markets. It will be another week before heavy Holiday shipments begin. Central California is holding for 4.00 to 5.00 f. o. b. basis.

Lemons are satisfactory; few going forward.

**Shipments**

Shipments of citrus fruit to date since November 1, 1922:

Southern California, oranges, 492 cars; lemons, 225; total 717. To same date last season, oranges, 388; lemons, 262; total, 650.

Central Californiia, oranges, 9; lemons, 23; total, 32. To same date last season, oranges, 218; lemons, 12; total, 230.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

The run through the Los Angeles stockyards has been averaging some 3500 cattle weekly. Part of these have been feeders going into the country or adjacent feed pens. The actual Los Angeles kill is running from 800 each day up, or from 4800 to 6000 weekly. My guess is that a third of the cattle at least sold through the yards have been feeders, and it will be seen that about half the kill and no more has been supplied through the stockyards so far.

Four different packers who use a large volume have stated they intend to purchase more heavily in the yards as soon as contracts are filled they have on hand.

So far feeder trade has been spotted, a good price for quality and lower prices for light southern steers, and by a good price I mean 6.00 to 7.00 for a feeder steer, that probably goes 900 to 1000 pounds but has breeding, and by a low price I mean 5.25 for light 700 pound steers that need a year on California grass to make something.

Top beef is around the 8 mark but the ordinary fat steer that we are used to calling beef around this Southwest is around the 7 mark, and the ordinary bossy cow from nearby ranges around the 5 mark.

### DAIRY PRODUCTS SHOW

(Continued from Page 571)

the Sacramento Bee and more recently with the Sutter Basin people. The principal thought as indicated by the discussions of the manufacturers who participated in the meetings was expressed by the words "quality" and "service." The work of the association during the past year has cost approximately $39,000, and those who contributed to the fund expressed most complete satisfaction in the efficient service rendered.

Dean Hunt gave credit to the council as having been an aid to the college of agriculture. In a short address he referred to the fact that the University of California has secured Dr. Mendel of Yale who is to deliver before U. C. a series of lectures on nutrition.

U. of C. Livestock Judging Teams

Top—First prize team in general livestock judging at Portland. Left to right: Prof. E. H. Hughes, coach; Francis R. Wilson, Oakand; Frank O. Blake, Santa Ana; Melvin W. Johnson, Oakland, high man of the entire contest; W. D. Auerbach, Ocean Park; J. E. Warne, Holtville. Bottom—Dairy judging team: Left to right, Louis Van Towt, Salinas; G. H. Du Buisson, South Africa; M. A. Salis, Bakersfield; Ralph Malmsten, Berkeley; Prof. W. E. Thomson, coach.

Dean Hunt referred to the five food sources: meats, fats, breadstuffs, vegetables and sugar. None of these furnishes a sufficient ration. At the same time fats may be considered as most necessary. Fats furnish two and a quarter times as much energy as starch and, discussing the effect of fat shortage in some nations during the recent war, the dean suggested that amongst the vast number of war winners it was safe to classify fat as "the winner of the war." The fat of highest quality is of course that produced by the dairy cow. Other sources are, and to a certain extent these are the competitors of the dairy cow, corn oil, olive oil, cottonseed oil, copra, peanuts, soy beans, sunflower seed and sesame. The richest countries in the world are dairy countries. Dairying prevails to a greater extent in the countries of England, Holland, Belgium and Denmark. In those countries three acres out of every four is in grass. "No grass, no cattle; no cattle no manure; no manure no grass." We are consuming three times as much milk as we were 70 years ago. The horticulturist who would keep up the fertility of his soil must work with the dairyman. Their problems are common problems.

### QUESTIONS AND ANSWERS

(Continued from Page 571)

tamarisk. The broom cannot well be kept to two feet high, but the evergreen may, though it should not be. Other shrubs for hot dry places are leptospermum, bottle brushes, Cassia artemesioides, and teucrium. Either of the last two is easily kept at two feet high.

**Nurse Crop**

Is it advisable to sow either barley or oats in alfalfa during the fall to choke or smother out weeds and noxious grasses?—Subscriber, San Fernando.

This practice is not so common as formerly. It was felt at one time that in sections where frost is reasonably sure to come any morning, an October or November sowed crop of alfalfa is liable to be injured, and that this injury may be materially lessened by the use of a hardy crop growing with the alfalfa. However, some believe that the injury to the permanent crop is so great because of moisture and nourishment taken from the alfalfa by the nurse crop that the injury is greater than the benefit. We believe the more general practice now is to sow thickly of alfalfa and as early as possible so as to get it far past the two-leaf stage and able to care for itself.

### AT PACIFIC INTERNATIONAL

Swine breeders from California who attended the Pacific International Livestock show at Portland are agreed that it was a wonderful dairy and beef cattle show, but as far as hogs went was below what it should have been, and in point of numbers and quality was equalled by almost any county fair in California. A number of Chester White herds present made a diversion from the California shows where the Whites are seldom seen. The Poland Chinas were the most numerous, and about 185 were there. California was represented by the very good herd shown all up and down this state by A. Buckland and Son of Fresno, and Jim Thorp brought his very excellent herd of Durocs. The judge was a man from Nebraska who had evidently been in the hog business when the small or medium type was the vogue and did not know that any other type of hog had been proven better and more desirable. Consequently these representative California herds which have held their own in all the shows in this state, where more money has been spent for the right kind of foundation stock and hogs are raised much more scientifically than in almost any other, did not have much luck. The best Thorp could do was to win senior champion sow, and Buckland, who had more competition from the medium type hogs, did not get a blue. The kind of hogs that California discarded eight or ten years ago were the ones that won. The Berkshires were judged by Professor E. H. Hughes of Davis, and the Italian Vineyard Company was quite successful. In the barrow classes a man from the Portland Stockyards did the placing, and he too liked the small ones so that a Poland barrow which was the exact prototype of the old pen pictures of hogs in vogue a dozen or more years ago, pictures where the hog was almost as broad as it was long and where the underline was perfectly straight, and only a few inches from the ground won over all breeds.

It is to be hoped that the breeders of the Northwest do not take this show as a criterion as to the type they are to breed, for if they do they will find themselves years behind the times. Do not think the California men are sore because they were beaten, because they are all too good sports for that. They do not like to be beaten by the type of hog which won, and 90 per cent or more of the breeders in the Northwest feel the same way about it. The whole affair was due to an unlucky choice of judges in the cases shown.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

**Lump Jaw (Actinomycosis)**

One of my cows has a lump on her lower jaw and I am told that it is lump jaw. Is there any danger of the other cattle getting it from her as they drink in the same trough? Does it affect the milk? What is the remedy?—Subscriber, Solvang.

Lump jaw is caused by a germ that may be in the feed and gets into the gums about the teeth and works down into the jaw. They seem to thrive well in bony tissue, especially about the teeth. There is very little danger of one cow getting it from another. So far it is not known to affect the milk. In the first stages it is said to be curable by giving iodide of potash in quite large doses. Lump jaw is not well known as the cases are scattered and not frequent. It does not seem to affect the meat of animals, and if well cooked is safe to be eaten. The remedy is to give one or one and one-half drams of the iodide of potash in the feed, or dissolved as a drench, once a day for two or three weeks. Then after omitting it for a time repeat the treatment. An ointment of iodine may also be applied to the lump. Mix two ounces of the tincture of iodine, one dram of iodine crystals and enough lard oil to make four ounces. Apply some of this once a day to the lump with a small swab.

**Fever Sore**

I have a cow that has a fever sore between her front teats in the center of her udder. She was fresh September 9. She had some fever so I milked her a week before she was fresh. I have washed it with lysol and put sulphur on it but it does not cure it. Please advise me what to do for it through the columns of the Cultivator. —Subscriber, Somerton, Arizona.

Wash it clean and dry it. Then put on burnt alum. If that fails, get from your druggist some Monsel's powder of iron and put on all that will stick. It will dry it up.

**Bloody Milk**

I have a cow that has been fresh about three months and at times since she was fresh she gives bloody milk from one front teat. It generally starts when you commence stripping the last milk. Sometimes there are clots of blood that come out with difficulty. It seems to be all in the teat and not in the udder. It seems to be getting worse. Is there any treatment that will stop it?—Subscriber, Acampo.

From your description it may be a bloody wart in the teat. It will be hard to get at to cure. Sometimes iron in the feed will heal things inside. Get half a pound of sulphate of iron and put a teaspoon of it in her feed once a day.

The Mexican state of Tabasco is now producing bananas equal to the best of those grown anywhere else, and up to June 30 of this year $239,705 worth from Tabasco came into this country, Consul Rankin informs the department of commerce. This was in spite of a poor year because of an unusual lack of rain. Mexico is the closest banana growing country to the United States and last year's exportation amounted to 1,345,709 to the United States, not including plantains.

**CHICKS CHICKS**

ELEC-CHIC HATCHED Baby Chicks are the finest and best and pay Highest Profits! Buy them through us from Elec-Chic Hatcheries or hatch them yourself. Send for prices and delivery dates on all popular breeds. Ask for free literature about Elec-Chic Incubators, Brooders and Co-operative Hatchery Plan.

# 16,400 Miles and the Original Air still in the Tires.

When Colonel King Stanley and Bill Spohn left Oakland, May 16th, on their trail-breaking trip from California to Maine and return, they equipped their car with

# COAST TIRES

and after covering 16,400 miles of the hardest kind of traveling over deserts and through country where the going was over lava, crushed quartz, mud, clay, rocks and boulders, they returned to Oakland on November first, with Oakland air in three of the four tires (the fourth having been punctured just once on the journey) and all four tires still good for many more miles of service.

The journey was made under varied weather conditions, from the extreme heat of midsummer to a raging blizzard encountered on the continental divide—many miles being traveled through snow, sleet, hail and rain.

*Colonel Stanley, in the preparation for his forthcoming "Off Trails Book" has motored over 260,000 miles, and states that in all his experience he has never found any tires that, for safety and durability, can be compared to Coast Tires.*

# Fifty-Fifth State Convention

**The Cultivator has referred editorially to the advantage of the specialized convention. At the same time it called attention to the necessity of the larger, more inclusive, convention, or clearing house, where producers from all parts of the state may bring together their ideas and evolve plans which shall lead to greater efficiency of all California growers. Such a convention will be that at Sacramento beginning Wednesday morning, December 13. It is a convention not only of farmers and fruit growers but of all those who realize California's needs.**

CULTURAL matters will be taboo at the coming Fruit Growers and Farmers Convention. Director Hecke takes the ground that the matter of orchard or farm practice can best be discussed in county or specialty conventions or institutes, for instance, the convention of Placer County growers a few weeks ago, also other conventions of growers of apricots, pears, prunes, walnuts, citrus fruits and so on, which bring together those interested in the one industry or locality. The discussion then centers and everyone present has vital interest in the subjects discussed.

The state convention will handle the larger problems with equal centering of interest of every grower from every part of the state. The recent specialty convention held at Berkeley brought together at practically every one of the sessions from three to five hundred people. One day was given entirely to pears, another to prunes and a third to apricots.

The state convention, to be held at Sacramento, December 12-14, will spend its first day discussing transportation, the second day, plant quarantine and cooperative marketing. The forenoon of the last day will also be given to cooperative marketing and the afternoon session to a report of the committee on agricultural legislation and general discussion of that subject. It may be noted by the tentative program given below that the state association of county horticultural commissioners will hold sessions during the conventions.

FRUIT GROWERS AND FARMERS; DECEMBER 12-14

**Tuesday, December 12**

Morning Session—Report on 1922 Transportation Situation, G. H. Hecke. Transportation from Shippers' Standpoint and Report of California Transportation Committee, Charles E. Virden, American Fruit and Vegetable Shippers Assocation. Grape Transportation in 1923, George Ashley, Lodi; discussion by J. T. Langford on Lodi car distribution plan. Experiments in Shipping Grapes by Boat, E. M. Sheehan, California Grape Growers' Exchange. Problems of Citrus Fruit Shipper, F. C. Fitzgibbon, Mutual Orange Distributors.

Afternoon Session—Railroad Situation in 1922 and Outlook for Next Year, William Sproule, Southern Pacific Railroad Company; discussion by Wilmer Sieg, California Fruit Distributors, J. L. Nagle, California Fruit Exchange and traffic managers fruit shipping companies. J. R. Hayden, Santa Fe Railroad; discussion, Thomas O'Neill, California Vegetable Union, H. S. Hazeltine, manager, American Fruit Growers, Inc., Los Angeles. The Refrigerator Car Supply for 1923, C. H. Secrist, Pacific Fruit Express Company; Sam Fulton, Santa Fe Railroad; Jack McClymonds, Western Pacific; discussion, Western States' Delegates (Washington, Oregon, Idaho, etc.), and others. Smoker and get-together, under auspices Sacramento Chamber of Commerce, in Chamber of Commerce assembly room.

(Note: The California Transportation Committee will meet 10 a. m., December 13, with C. E. Virden acting as chairman, with the interstate commerce commission, representatives from Western states, transportation officials, California shippers and other invited guests. A full report of the conclusions of this committee is to be rendered later to the convention—probably on Thursday morning.)

**Wednesday, December 13**

Morning Session—Quarantine Program, State Department of Agriculture, G. H. Hecke; discussion by James Mills. Plant Quarantine in East and West, Lee A. Strong, State Department of Agriculture; discussion by Jack McDonald, Milpitas. Plant Quarantine—California's Vital Necessity, C. C. Teague; discussion by C. D. Hamilton, board of supervisors, Riverside. The Canners' Relation to Plant Quarantine, Charles Bentley, California Packing Corporation; discussion led by S. W. Cunningham, Southern California Canners' League.

Afternoon Session—Report of Results and Projects of Cooperative Marketing and other Associations, California Growers and Shippers League, F. B. McKevitt. California Almond Growers Exchange, George W. Pierce. California Peach and Fig Growers Association, G. F. Niswander. California Fruit Growers Exchange, E. G. Dezell. Sun-Maid Raisin Growers Association, Wylie M. Giffen. California Prune and Apricot Growers Association, H. C. Dunlap. Mutual Orange Distributors, C. R. Early. California Fruit Exchange, George Cutter. California Pear Growers Association, Frank T. Swett. California Walnut Growers Association, Carlyle Thorpe. California Walnut Growers Association, R. W. Skinner, president.

(The reports of the California cooperative marketing organizations form a consecutive record of the history of cooperative effort in this state, and they have been a part of the proceedings of the Farmers and Fruit Growers' Conventions for a number of years.)

Evening Session—Banquet.

**Thursday, December 14**

Morning Session—Budget of U. S. Department of Agriculture, R. N. Wilson, Agricultural Legislative Committee; discussion led by Fred K. Howard, Sun-maid Raisin Growers, and H. J. Ramsey, Fruit Growers Exchange. Budget of State Department of Agricure and College of Agriculture, Frank T. Swett, California Pear Growers Association; discussion by LeRoy Anderson, California Prune and Apricot Growers Association, and J. A. Teagarden. Markets and Federal Financing, Ralph P. Merritt, California Rice Growers Association; discussion by George Farrand, California Fruit Growers Exchange. Report of Convention Resolutions Committee.

COUNTY HORTICULTURAL COMMISSIONERS' CONVENTION

**Monday, December 11**

Morning Session—Meeting of Legislative Committee of State Association of Horticultural Commissioners.

Afternoon Session—Meeting of Legislative Committee with R. N. Wilson.

Evening Session—Executive Session of Commissioners. Election of Officers. Discussion and Amendment of By-laws of Commissioners' Association. Report of Legislative Committee. Appointment of Committees.

**Tuesday, December 12**

Opening of Annual Fruit Growers' Convention.

**Wednesday, December 13**

Fruit Growers' Convention.

**Thursday, December 14**

Morning, Fruit Growers' Convention.

Afternoon Session—Educational Exhibits of the County Commissioner at County Fairs, H. J. Ryan. Discussion of proposed legislation, R. N. Wilson. Report and Discussion of Report of Legislative Committee, Harry Ladd. Quarantine Problems, Lee A. Strong and C. E. Cooley. Analysis of recent decision of Supreme Court pertaining to the Fruit and Vegetable Standardization Law, F. W. Read

Evening Session—Pest Control, Harry S. Smith. Insecticides and Fungicides, George P. Gray. Rodents and Weeds, W. C. Jacobsen and Ethelbert Johnson. Nursery Service, Fred C. Brosius. Vacuum Fumigation, D. B. Mackie.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will be pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

## EDITORIALETTES

The Cultivator is so crowded with good things this week that the beautiful photograph for the cover page has been put on the waiting list for another week and the cover is given over to the program for the state convention to be held in Sacramento, December 13-15. We have heard it intimated that this convention will command large attendance, perhaps the largest yet given to farmers and fruit growers conventions in California. There are some important questions to be discussed.

* * *

One question which will call for discussion is that of transportation. Furthermore, we believe it will call for a rattling good display of fireworks. Since the days of Russ Stephens the transportation question has been allowed to rest somewhat peacefully, and we believe we are entirely correct in saying that some of the abuses which were terminated were due to the agitation of Mr. Stephens and his supporters on the floor of the state fruit growers convention. Since Mr. Stephens ceased his labors new causes for agitation seem to have arisen. The new chairman of the transportation committee is Charles Virden. Mr. Virden has a way of stating things little less forceful than Mr. Stephens, therefore we predict a real interesting time for the attendance at the convention.

* * *

Speaking of a car shortage we are reminded that at a recent conference of shippers, traffic associations, chambers of commerce and railroads an urgent telegram was sent by the state commission to the interstate commerce commission requesting the issuance of an emergcny order whereby railroads serving California shall receive at least 400 empty box cars daily for a period of 30 days. This telegram was supplemented by wires from C. F. Hoover, representing the bureau of service of the interstate commerce commission, by George H. Hecke of the state department of agriculture, by representatives of the railroads to the car service division of the American Railway Association and by a representative of the San Francisco Chamber of Commerce to Seth Mann, now in Washington. All these telegrams urged immediate action to relieve what was described as a very critical situation confronting California producers and shippers.

* * *

A part of the wire to Washington is as follows:

"Shippers very agitated over order of American Railway Association to move 1000 empty box cars regardless of ownership to Northwest daily. Box car situation in this section very serious. No results noticeable from priority orders issued October 26. Railroads in state short equivalent of about 10,000 box cars of ownership. Southern Pacific requires 200, Santa Fe 100, Northwestern Pacific 50 and Western Pacific 50 daily until 10,000 received and then eastern connections maintain balance daily to insure sufficient cars for needs of state. Investigation proves these railroads in position to handle this number cars daily without congestion. Refrigerator car situation easy but supply must be kept coming West to care for vegetable and citrus shipments. Advise prospects movement box cars West."

* * *

Here's wishing success for Californian livestock men who have conditioned and taken to the Chicago International some of California's finest. Of course Prof. True is there with some of the university's finest stock which has resulted from the feeding of Alex McDonald, and several producers of the Sacramento and San Joaquin Valley are also sending in a fine bunch of stock. We hope we may announce the California winners next week.

* * *

The Horse Association of America meets in regular annual session at Chicago next Wednesday. This is not a breed association, neither is it devoted to the draft animal alone. It is an association looking after the welfare of the horse. One session of the convention is to be given up largely to the discussion of "Equipping 19,000,000 Horses in Up-to-date Togs." It has been announced that this discussion will be filled with good, straight horse sense.

* * *

Imperial County is all puffed up over its production of cantaloupes. On June 27 more than a score of long trains was required to take its one day's output out of the valley. Or to express it more accurately there were shipped on that day 648 carloads. Six hundred and forty-eight cars shipped during 24 hours means practically one carload every two minutes. Not half bad for the Colorado desert! The biggest day of any preceding season had been 340 cars, hence this year's output from its peak load day nearly doubled any former year's accomplishment. The total for the season was 12,065 cars, while the output last season was 10,708, and in 1920 8,903. Brawley still remains the largest producer, but Heber, El Centro and Westmoreland are growing into young giants in the cantaloupe producing game.

## WHERE WE STAND

The farm paper support of the Los Angeles Union Stockyards has been thought by some people in stockyards activities to be lukewarm. On the contrary the anti-stockyards people have believed that influence and subsidy affected policies control. The opposing cattlemen particularly deplore what they term a pro-yards sentiment on the part of local farm papers. The Cultivator has supported stockyards, asked for them years ago, and still wants them with the proviso they are operated in producer protection.

The Cultivator believes such a market operation is protected by full legal enactments, providing they are applied strictly, and that the small man will through such a market receive a price equal to that paid for large lots. So conducted such a stockyards will help this entire Southwest.

The Cultivator stands for the producer's interest and will not acquiesce or be silent if the interests of the producers are threatened. The Cultivator is for stockyards if they will give the small man both a chance to buy and a chance to borrow. The Cultivator is for a stockyards if the raising of pure bred livestock will be stimulated through a quality price.

The Cultivator is not for a stockyards if the bulk of the Southwest prices are lowered locally below other markets irrespective of what top prices are. The Cultivator is not for stockyards if the small men are not fully protected in lot sales and allowed free purchase and financial help without dictation by loan companies with packing or yard interests. The Cultivator is not for stockyards if an extra price is not paid for specially bred quality hogs or cattle.

The Cultivator is for a system of market reports that will not only give the high and low, but will further give in the yards the numbers of livestock and exact prices. The Cultivator wants the country to know what the bulk is bringing, not what a few tops or a few tail ends bring. Give us an open market as the stockyards act guarantees to us and the protection of producers.

## BLOCKADE BROKEN

The "barrage of silence" at Santa Fe, New Mexico, has been broken and a statement has been issued and belief expressed that a treaty between the seven Southwestern states and the federal government has been effected which means much in the advancement of the entire Southwest. The treaty, or agreement, is known as the Colorado River Compact. It has been signed by Herbert Hoover, representing the federal government, and by the representatoves of the seven Southwestern states. Hoover is reported as saying: "This agreement breaks the blockade on the development of the whole Colorado River." The dispatches report Mr. Hoover as saying further:

"It allows us all to go ahead with river development and with flood protection for the Imperial Valley.

"One can get great emotion over conflict and quarrel, but there is no great oratory about the facts that the northern basin is separated from the southern basin by 1000 miles of barren canyon; that the agricultural and economic life of the two basins are wholly different and that the logical thing to do is to divide the water between them so they can make homes instead of defending injunctions. Nor can one make great oratory out of the fact that there is ample water and to spare after the apportionment of enough water to each basin in perpetuity to cover all of the present users plus all of the known feasible projects, plus 30 per cent for good measure, then holding in reserve 30 per cent for 40 years to see where it is most needed.

"There is nothing sensational about a compact that leaves all question of Mexican right to water to the state department which is the only organ of the American people which has any right to deal with this question.

"There is nothing especially romantic about the provisions in the compact for the complete priority of agriculture over power in the use of the water of this river.

"Yet behind all the precise and commonplace language of this compact lie the greatness and the romance of the West, the building of a million more homes out under the blue sky in security and good will.

"The compact has wide interest for, with the exception of two other cases, and these only between two states, this compact makes the first time that a considerable number of states have settled fundamental interstate rights by process of treaty instead of resort to the supreme court."

## EFFICIENCY OF COOPERATION

One of the greatest accomplishments of cooperative marketing has been in the greater efficiency and economy secured. It was shown years ago when the orange growers began to pack and ship their own. Costs were greatly reduced. Other organizations have invariably shown similar efficient management. Cities which have installed and operated water works or lighting plants have been able to do it at material reduction to consumers.

Olive growers are asking as to whether their packing costs are not too high. Some weeks since this discussion was taken up in our columns. Mr. Ludwig, a grower-packer, presented figures as to cost of processing and packing. These made cost of processing and putting olives in quart cans, $205 per ton. Of that amount nearly a half was for overhead. Four of those items were: Samples, insurance, advertising, $14; depreciation on plant and equipment, $16; general factory overhead (including office and managers salaries) $20; interest on investment six per cent, $13. Or $63 on each ton of olives passing through the house.

Unfortunately we have no figures from cooperative olive growers which are comparable. Mr. Drew of the new association estimates total cost, including overhead, of processing and packing at $125. We believe the new association can make good on that estimate.

There are other figures which, while not comparable, are most enlightening as to the efficiency of cooperation.

The Sun-maid Raisin Growers has succeeded—is succeeding rather for it is a continuing process—in great reduction in costs and in increasing labor efficiency. In an address before farm advisers and others at a recent meeting at Fresno Fred K. Howard gave the following as the general overhead in marketing raisins: Advertising, $13.21; sales expense, $7.18; interest paid on working fund, $2.69; office salaries, $1.92; office expenses, 34 cents; taxes, etc., $2.61; crop contract expenses, $1.08; storage, insurance, etc., $1.58 ;freight to packing house, etc., $1.11; reserve for stock dividend, $1.18; total, $32.90. From this may be deducted 45 cents for wastes sold.

That is efficiency, and it is the result of plain every day business farmers getting together, then putting power in the hands of a competent directorate.

# California Cultivator

Vol. LIX, No. 23 December 2, 1922 One Dollar Yearly

# Cooperation by Raisin Growers Has Resulted in Efficiency

UDER the title of "Efficiency in Cooperation" on editorial page of this issue is given a fund of information based on figures obtained from operating cost sheets of the Sun-Maid Raisin Growers. The figures were given out by Fred K. Howard in a recent conference of some of the association officials, farm advisers and farm bureau members at Fresno. Those figures are not absolute, that is, they represent averages rather than exact figures with reference to any one variety of raisins. They are, however, eloquent proof of the correctness of the statement made on editorial page that cooperatives are more efficient in business management than are private concerns.

At the same meeting President Wylie Giffen answered the question: "Why are Sun-Maid raisins advertised around the world?" Mr. Giffen disclaimed any right to be called an expert in advertising, in fact he said that he knew nothing whatever about its details but he did know that when an educational campaign was taken up through advertising a vast increase in consumption and stabilizing of the market had resulted. Mr. Giffen insisted, however, that the first step in advertising must be taken by the producer and that step was made plain by the use of the one word "quality." Quality and food value, explained to consumers of the United States, Canada and Great Britain, has cost the growers millions of dollars. It has, however, returned to the growers tens of millions.

Mr. Giffen also enlarged upon the problem that is before the producers in that the wonderful increase in production calls for a continually enlarging market. Only a few years ago the organization and efficiency of the cooperative movement was made necessary by an "over-production" of 35,000 tons. That production has been continually increasing until the present year's production will exceed 225,000 tons. In a very few years at present planting rate more than 500,000 tons will have to be consumed. The natural increase of the human race will not care for this additional consumption. A campaign of education as to the food value is one way in which the increased consumption can be encouraged. In addition there must be great care in extending the planting and in growing only those grapes which make highest quality raisins. Touching upon quality F. A. Seymour, general manager, stressed the point that unless the Sun-Maid growers offer the highest quality the marketing problem will become serious. Mr. Seymour said:

**By F. A. Seymour**

There is an old copybook motto which reads, "Whatever is worth doing, is worth doing well." If it is worth the time and trouble and the worry of weather conditions to produce a crop of raisins, it is certainly worth producing the best possible quality, and the additional expense incurred in getting the best quality is so little beyond that which is required to produce any kind of a crop that it is not worth considering, and the result to the entire industry is almost beyond belief.

The tendency and demand of modern times is to improve every product, and competition increases this necessity. Our product competes in the markets of the world with all other dried fruits to a certain extent, and also in a limited measure with fresh and canned fruits. We are advocating in the magazines and press of the country the use of raisins in pies, in which field we become competitors with both fresh and preserved fruits of almost every kind. The use of raisins in ice cream is a new departure and one which we have spent time in introducing, and which is becoming popular in many of the larger cities. In this line, also, we become competitors with a long line of fresh fruits.

There is in addition a real mercenary, monetary commercial reason for producing quality, which means the difference between a profit or a loss on our vineyards, and since this organization was formed for the purpose of securing better returns to the owner for his product, that alone should be sufficient reason for the greatest effort on the part of all concerned to produce quality.

We have progressed along this road a considerable distance, and we must continue to improve as it is not possible to stand still. We have been a success up to the present time, and some people claim that our success is due to world conditions, and in spite of inefficient management. We believe, however, that opinion is not entirely correct and think some measure of our success is due to an untiring effort of the entire organization. However, 'that' as Kipling says, 'is another story.' Our success, plus war conditions, has encouraged the planting of new acreage in enormous and unexpected quantities. This means greater tonnage to sell, and each year our continued success will automatically increase the burden and responsibility in that respect. Probably in not as great proportion as during the past three years, but a gradual and continual increase each year.

**The Industry Past and Present**

"From an average tonnage for five years prior to 1912 of 70,000 tons per year, during which time there was a surplus each year of 20,000 to 40,000 tons, we have increased our tonnage until this year we will have a total in excess of 225,000 tons, and the plantings to date assure us of something more than 400,000 tons within the next five years.

"This organization expects to handle 200,000 tons from this crop, which will be received from growers at 26 plants equipped with stemmers and manufacturing machinery, and 20 receiving stations where the present tonnage does not warrant the erection of a plant.

"During the height of the busy season we employ between 4,000 and 5,000 people, with a weekly payroll of from $90,000 to $100,000. We shall be receiving as high as 6,000 tons per day and paying to growers at time of delivery $500,000 per day. The gross amount realized from the sale of this tonnage will be about $40,000,000, with a net return to the growers of $24,000,000.

"There are few people in this valley who realize to what extent this big business has developed. We have the largest cooperative organization in this country and probably in the world. A business of such proportions must be conducted on a big business basis. By this I mean that we are in competition with the large firms doing business throughout the world, and in order to successfully compete we must have able men to handle our affairs, as it is only men of ability who can economically administer the many branches of an industry such as ours. It may seem this is digressing from our subject,

# December in the Vegetable Garden

## Northern California

**By A. R. Gould**

A SUCCESSIONAL supply of vegetables is very important throughout the year and fortunately we are able to have quite an assortment even through the winter but of course we find our list somewhat curtailed. However, those crops gathered last month and stored in the cellar are very useful for immediate table use, and as we still have to look ahead and prepare for our spring crops there will be some hard digging, trenching and manuring, and there is nothing more important in the garden than these last named operations as they are the foundation of successful gardening. The use of the hoe or cultivator will be also necessary to most growing crops, and this system will, applied regularly prove the most effective weed killer.

**Peas**

Sow the early varieties, Little Marvel, Alaska and Blue Bantam in rows 2½ feet apart and cultivate those sown last month and protect from birds by netting.

**Swiss Chard**

Thin out the seedlings when large enough and leave the plants eight or ten inches apart in the row. Extended plantings may be made. This makes an excellent green vegetable and is also good for poultry.

**Onions**

Sow seed of all the early varieties; Early Pearl, White Bermuda, California Red, and White Queen on richly prepared ground in rows 12 to 18 inches apart, and the plots should also be prepared for the main crop varieties by deep trenching.

**Lettuce**

Sow Los Angeles, Big Boston and White Paris Cos, all good varieties, in rows 20 inches apart. The seed must be sown thinly and on fairly rich soil. Thin out those previously sown, and any of the more sturdy seedlings may be used for transplanting.

**Rhubarb**

This crop pays handsomely on a small investment and if given care in cultivation, which includes liberal application of manure, and kept fairly moist, the returns will be very encouraging. Strong clumps for immediate planting may still be secured and should be planted two to three feet apart, while the rows must be four feet apart. Wagner's Improved, Crimson Winter and Myatts Victoria are the best varieties to grow.

**Beans**

Cultivate between the rows of the Broad Windsor.

**Turnip**

Sow Early Snowball and White Flat-

(Continued on Page 599)

## Southern California

**By D. F. Reichard**

THIS is a good month to start preparing for your early spring garden. While some of the more hardy varieties of vegetables may be put in, the main garden operations should be preparation. In the old gardens if pruning and general cleaning up of mature crops has not been completed, it should be finished this month, putting into the compost pile all available refuse. On all ground that is to be worked up for spring planting, in both new and old gardens, there should be a liberal dressing of barnyard manure which should be turned under after the first good soaking rain. If this rain does not develop by the latter part of the month, it would be advisable to thoroughly soak the ground with a sprinkler. As soon as your ground can be worked without its sticking to your tools work to a depth of 10 to 12 inches, being sure to get all the manure well covered. Pulverize as deeply as possible so as not to leave unnecessary air spaces. After each rain during the winter the surface should be gone over as soon as it is workable to break up the crust formed by the rain and to kill such weeds as may start.

This month's plantings will comprise only the hardy vegetables as suggested before. However, there are some limited frostless sections with us where potatoes or even Canadian Wonder and Ventura Wonder beans may be planted. This is an ideal time to set out such permanent garden stuff as asparagus roots, Green Globe artichokes, also berry plants. By putting these in at this time, while they will make little or no top growth, their root system is getting established so that as soon as we get some warm weather in spring they will make rapid growth. Set out plants of cabbage, cauliflower, kale, Swiss chard and onion sets. Sow the seeds of beets, carrots, turnips, radishes, lettuce, parsnips, salisfy and cabbage and cauliflower seed for plants to be set out later. For those who have hot beds or can arrange for them, now is the time to get them ready for seedings. The latter part of this month egg plant, pepper and tomato seed should be put in the hot beds for early planting.

Look out for aphis on your peas planted the last month or so. It is also time to spray your dormant fruit trees with lime-sulphur for controlling fungus and insects.

# Agricultural News Notes of the Pacific Coast

## Northern California

Fruit Growers and Farmers Convention at Sacramento, December 12-14.

Early rains followed by warm weather have brought out young growth on pastures.

Six carloads of almonds have been sent from Orland to the Almond Growers Exchange.

A new fig cannery is to be established at Oakland in time to handle the 1923 crop.

Orange and Olive Exposition at Oroville, November 28-December 3. This is the 12th annual.

A Shasta County farmer reports loss of his sweet potato crop through depredations of deer.

Frank N. Bullard has been elected president of the Yolo, Solano and Colusa Counties Wool Growers Association.

With continued fair weather promised rice growers have redoubled their efforts to get their crops in before another rainy spell.

The state bureau of markets says that the usual supply of turkeys will not be available for Thanksgiving and Christmas trade.

The California Grape Growers Exchange has announced that unless it doubles its membership campaign by January 9, 1923, it will discontinue.

Approximately 88,000 pounds of New Zealand butter arrived in San Francisco on Monday of last week and helped to weaken the market. Most of it was shipped to Los Angeles.

The first car of new crop Navel oranges from the Oroville district was shipped by the Stewart Fruit Company on November 12. The fruit is said to have been of very fine quality.

Rice growers are liable for damage from water percolating from flooded fields, according to decision of the third district court of appeal affirming findings of superior court of Sutter County.

The table and wine grape crop this year is reported by Secretary Sheehan of the Grape Growers Exchange to be 20 per cent over last year's. Shipments brought gross return of $84,000,000.

Colusa County supervisors have voted $500 to aid tree planting on highways. This money will be used for purchase of European sycamore trees which will be planted on approaches to Arbuckle, Williams, Maxwell and Colusa.

Wallace I. Hutchinson, assistant chief of the branch of public relations in the Washington, D. C., headquarters of the United States forest service, will take charge of educational activities in the California district. He is stationed at San Francisco.

One hundred sixty-seven million feet of timber on the Plumas national forest has just been sold to the Swayne Lumber Company of Oroville. The timber covers about 14,000 acres in what is known as the sugar pine—yellow pine belt in the heart of the Sierra.

The $100 prize for highest production of butterfat at the Humboldt County fair was won by a Jersey cow owned by J. W. Coppini of Ferndale. During the three test days this Jersey produced 83.5 pounds milk testing 6.9 per cent fat. This in the ninth month of her lactation period.

## Central California

Stanislaus is discussing advisability of securing permanent county fair grounds at Modesto.

The California Nursery Company has secured a tract in the Waterford district of Stanislaus County.

Due to advance in wheat prices the price of flour has been raised 40 cents per hundred in the past month.

It is proposed to organize a Porterville irrigation district to include lands drawing water from the Tule River.

The first carload of Kern County Navels went forward on November 21 for New York's holiday market.

The packing plant of the Edison, Kern County, Orange Growers Association is working to capacity getting out new Navels for eastern holiday market.

The Oakdale section of Stanislaus County reports rainfall so far this season, 2.82 inches. Many farmers are seeding grains.

The Sun-Maid Raisin Growers invited publishers of the San Joaquin Valley to an all day meeting at Fresno last Tuesday, November 28.

Farm Adviser A. A. Jungerman of Stanislaus County has a new assistant in W. H. Brooks who comes from three years work as county agent of Miami County, Kansas.

Because of impossibility of driving trucks into Watsonville apple orchards since the recent rain growers hauled boxed fruit to paved roads where trucks await them.

The annual grape institute held under the auspices of the Sun-Maid Raisin growers of the San Joaquin valley will be held at Fresno shortly after the first of the year.

Sixty cows in the Patterson-Newman and Crow's Landing units of the Stanislaus County cow testing association were sold to butchers during September because they were low producers.

Officers of the Oakdale and South San Joaquin irrigation districts have been conferring with the owner of site for the proposed Melone reservoir in the hope of reaching settlement out of court.

The Stanislaus County Jersey Calf Club has been outlining plans for the coming year. A special meeting and election of officers will be held today, December 2. Six members of this club showed at the state fair.

The Mutual Orange Distributors has opened a new office in the Moore Building, Lindsay. The office will be maintained until December 23. The association's first carload shipment went out Wednesday, November 15.

Preliminary work on the five year program of the U. S. weather bureau in frost prevention work in Central California citrus districts has been in progress for several weeks. The office will soon be ready to send out frost warnings.

The first unit of the alcohol plant to be built at Turlock will distill 1200 gallons per day. It will be erected by the California Sweet Potato Growers Corporation and will be under constant supervision of federal inspectors. The alcohol will be used for medicinal and industrial use only.

## Southern California

The annual convention of the American National Livestock Association will be held at Los Angeles, January 30-February. 1.

A poultry show will be held by the California State Poultry Association, southern branch, at Los Angeles, December 12-17.

Cattlemen of Riverside County met with officials of the California Cattlemen's Association at Mission Inn, November 29.

Petition has been presented to San Bernardino County supervisors by Chino residents asking for passage of anti-smudge ordinance.

A uniform premium list of the livestock division of California fairs is proposed by Secretary Van Pelt of the Southern California Fair Association.

The Ontario-Cucamonga Fruit Exchange has just closed its 25th year with output of 1409 cars citrus fruit for which it received approximately $2,340,150.

Cattlemen of Riverside and San Bernardino Counties met at Riverside, November 29 to discuss legislative matters which should be brought before the next session.

Riverside County is asking improvement of the road between Blythe and Mecca to connect with the paved highway from Phoenix to the Colorado River at the ferry crossing.

The Mutual Water Company of Escondido has signed contracts with the San Diego County Water Company for delivery of water from the new Henshaw dam on the Warner ranch.

Highland, San Bernardino County, shipped the first cars of new crop Navel oranges from Southern California this season. The three carloads were sent to the eastern market on Thursday, November 16.

Approximately 1,000,000 pounds of prunes will be packed in one, two and five pound cartons by the Oregon Growers' Cooperative Association this year. This style of packing is proving a more popular seller every day.

Representatives of the poultry department of the seven southern counties in the California farm bureau will meet at Pomona on December 1 to adopt constitution and by-laws and draw up definite program of work.

Additional inspectors for quarantine service at Blythe, Parker, Yuma and Needles are urged by local interests. The state department of agriculture is taking the matter up with county supervisors on a cooperative proposal.

Rushing to precede the southern California shipment of first citrus fruit—Sanger, Exeter, Woodlake and Visalia, in the San Joaquin Valley have shipped carloads of Navel oranges to the eastern markets. The Fresno County crop was not injured by the frosts of last week according to report of Fred P Roullard, county horticultural commissioner.

The marketing committee of the potato growers department of the Los Angeles County farm bureau is composed of E. D. McSweeney, chairman; J. C. Craig, Owensmouth; H. G. Miller, Shafter; V. B. Burger, San Bernardino; T. H. Lambert, El Monte; Mark Grimes, Van Nuys; Mr. McMeekin, Arcadia; J. B. Mather, Van Nuys; G. A. Allard, Zelzah; W. P. Whitsett, Van Nuys.

## The Coast and General

Eight carloads of lettuce went to Chicago in October from Idaho Falls.

The Pacific Northwest Potato Show and Potato Growers Conference was held at Spokane, November 21-24.

The annual meeting of the American Farm Bureau Federation will be held in Chicago, December 11-14.

Annual field meetings of the Arizona Grape Growers Association were held November 15 and 16 in vineyards near Phoenix.

Within the past two months 78,000 sheep have been brought from Utah to the strip of Arizona north of the Colorado River.

Canada permitted sale and manufacture of oleo during war times but has now in force regulations practically prohibiting it.

Forty cars of livestock were shipped from Seligman, Arizona, during the week; in that district the range and stock are reported fair.

The beet sugar factory at Idaho Falls, Idaho, is running on an estimated tonnage of 70,000. The plant will run till well into December.

Penguin eggs are considered a great delicacy in South Africa, where nearly 48,000 dozen were gathered last year from nearby islands and sold at Cape Town.

The Phoenix district of Arizona estimates 75,000 cattle being fed this season. The Yuma and Upper Gila Valleys show large numbers of feeders also.

Sweet potatoes of excellent quality are now being dug in Arizona. Though the freeze killed the vines before growers cut them off, the tubers seem little damaged.

The first Arizona oranges of the season are on the market although picking generally is several weeks off. In the Yuma Valley orange picking will get well under way during the week.

Governor Hart of Washington has been in Sacramento in the interests of meeting of the 11 western states in Sacramento at the time of the Fruit Growers and Farmers Convention, December 12-14.

Livestock men and alfalfa growers of Bonneville County, Idaho, held a meeting recently to take steps to fix a price for alfalfa that would be equitable to all interests. A "live and let live" program is being worked out by these producers and consumers.

Now that they have had time to take stock of their losses, Arizona cotton growers agree that the untimely freeze of last week cost them from one-sixth to nearly one-half of their potential crop. Only those in the lighter soils of the upper bench lands escaped.

Cherries from Czecho-Slovakia are becoming common over western Europe. In one month during the summer over 40 carloads were shipped out of that country, according to American Consul C. S. Winans, Prague, the greater part to England and Holland.

Germany has become a country of candy eaters. The demand for candy to take the place of other foodstuffs which are too high to buy is so great that factories are working overtime and competition has virtually ceased. Dividends ranging from 200 to over 365 per cent indicate the profit in the manufacturing end of the business.

# What Shall I Plant?

By Fred K, Howard

NOW many fruit growers are pondering over this question in all sections of the state? California as a whole has perhaps felt the decline in prices of farm products less severely than any other section of the United States. It was only during the past season that organized producers of California really began to feel that there has been a severe adjustment in prices that very materially affects their business. Cooperative marketing organizations in California have, as a rule, "cushioned" the fall of prices, permitting producers to get out from under crops which were high priced because of high costs for labor and materials during the growing period. This season, therefore, there is a general trend toward more serious consideration of the prospects for the future of the California fruit industry. All classes of producers are making an effort to obtain authentic information which will guide them in their future crop.

Fresh fruit producers have quite generally felt the pinch of the lower buying power in their markets and have experienced considerable difficulty in securing cars for all their crops. It is believed by some that the car shortage during the past season saved the day for California fresh fruit since it prevented the serious glutting of terminal markets and a consequent red ink return.

The transportation problem was aggravated by the coal and rail strikes, and probably a similar condition will not occur in the immediate future. Emergencies of this sort have forced fruit growers to utilize every means within their power to cope with the situation. The all water route, for instance, from the coast via the canal has been used to a great extent by the dried fruit interests and extensive experiments have been made in the shipment of fresh fruits under various cooling systems. The experience thus gained should have a marked influence on the future of the California fruit industry.

One of the outstanding results of the past season is the more general feeling on the part of all that quality counts; all other things being equal. The best fruits have been those to stand the test and bring home the "bacon" in the form of substantial net profit. Important as is the question of quality there is still another very serious question; even more serious if such a thing is possible. It has to do with looking into the future of the business of fruit growing and viewing its potential possibilities. It has to do with a greater respect for cooperative marketing organizations. It has promoted a tendency toward closer community cooperation. Here and there, as the result of this condition there has already appeared on the surface concrete evidence of what is taking place. There is, for instance, at the present time, a general undercurrent throughout the grape growing district of the San Joaquin Valley looking toward the complete organization of the fresh grape producers along lines which will permit proper merchandising of this California product. An extensive advertising campaign is proposed.

There are smaller community movements such as one which took definite form at a farm bureau meeting at Earlimart, Tulare County, recently. That body, after due deliberation, appointed a committee of its own number to investigate and report back its findings with recommendations as to the fruit or fruits which should be generally planted in that district. It is not expected that a community can absolutely control planting in this manner, but it indicates that the more level headed individuals in the community are at least getting control of the situation.

During the past few years of unprecedented high return for fruit there has been as much "wildcatting" in orchard and vineyard development as has ever been experienced in oil. Trees and vines were planted without regard to the suitability of the district in either soil or climatic conditions to the variety or varieties. Very often water for irrigation was deficient or wholly lacking. Land was not properly leveled or put in shape before planting. Skilled labor for the peaks of pruning and harvesting will never be available in some of these districts because they are isolated and there is not sufficient acreage to furnish work during long periods for such labor.

Transportation, that great essential to successful marketing of fruits, was often entirely lacking except at the expense of long hauls. These and many other details were too often overlooked in the mad rush to plant "something."

The Earlimart idea contemplates a study of soil, climate and water requirements of that district, as well as labor, packing, marketing and transportation facilities. It contemplates promoting enough interest in certain varieties of fruit to insure volume, which in turn means efficient handling, standardized quality and many other direct benefits. Such a committee will give publicity to its findings and things which every grower in the district should know will become common property. Discussion of the problems involved will be had and thus the individual, the community and the industry as a whole will benefit. The day is past when the prospective producer of fruit in California can plant promiscuous varieties in any section of the state and expect to make a legitimate and fair return on his investment.

There should be more of such community committees as described above. It is an outgrowth of the cooperative idea. By this means, and by this means only, will the problem of what to plant be intelligently solved insofar as such solution is possible.

# Arizona's 1922 Fair

By M. E. Bemis

SOMETIMES it takes an object lesson to make us realize our progress. The Arizona state fair might be considered a milestone on the boulevard of the state's progress, but it is more than that; it is a barometer that indicates the trend of agricultural and livestock activities and enables one to estimate to some extent what may be expected in the future.

Beginning with the livestock exhibits, this department was so much ahead of the fair of two years ago that there was almost no comparison. It will be recalled that two years ago the state's agricultural activities were largely directed to the growing of cotton. The exhibits of livestock and agricultural products reflected the preponderance of cotton in smaller exhibits of dairy cattle and other livestock as well as of fruits, vegetables and grain and other farm products.

The beef breeds were represented by the Herefords only this year, but in sufficient numbers to show the popularity of this breed and the importance of beef cattle in Arizona. Babbitt and Cowden of Phoenix showed two herds, one horned and one polled. Heading the horned herd was Bonnie Donald, 548949. Most of the herd is of his get. He was exhibited as a junior calf in a number of eastern fairs in 1916 and was awarded the championship in each case. The Scotch Farms of Tucson also had a fine exhibit. This herd has two bulls and two heifers from Boleado's 6th. George W. Burgess of Casa Grande is one of the noted Hereford breeders of Arizona, and he was at the fair with a string of nine bulls. The University of Arizona also made a good showing of Herefords.

The hog show was exceptional in quality and brought out as many animals as any other state fair show. This show also marked the introduction of the Ohio Improved Chesters. These were shown by three exhibitors, one, the man who introduced them to Arizona, O. R. Harmm of Chandler. Mr. Harmm has interested a number of his neighbors in this breed, and they have formed a state association. Durocs were shown by four breeders. Among these are Smith Brothers, showing a good string, among them Desert Queen, with a record of 42 pigs in three litters. One of the Smith Brothers has supervision over the hogs at the St. Johns Indian Mission Farm. This is one of the largest herds of hogs in Arizona.

There were several other exhibits of Durocs and a large class of Poland Chinas, one of Hampshires.

Exhibits of sheep were disappointing as there were none from the big sheep firms of the north. Some good quality Rambouillets were shows by the Tempe Normal School. The U. S. Indian School, Phoenix, showed some quality Hampshires as well as Rambouillets. A number of milch goats were shown by Wm. Zeller of Phoenix.

The poultry show was the "best ever." More birds, better quality, and better cooping arrangements characterized the show. Judge Mumford of Los Angeles officiated very satisfactorily in making the awards. Poultry, like hogs and dairy cattle, are among the exhibits which in improved quality indicate the increase in interest the past two years.

There have been larger exhibits in the horticultural hall from some counties, but rarely, if ever, has the quality been better. Particularly was this true of the exhibits from Maricopa.

A noticeable feature of the fair this year was the absence from the most prominent part of the fair grounds of the objectionable fakers, fortune tellers and games of chance. In this the state fair commission has followed the example of most eastern fairs. There are two ways of estimating whether or not this pays. As a business proposition possibly it may bring more revenue to the state fair commission, but while fairs must be managed as a business, and by business methods, their first purpose is educational, and second, clean amusement, and the old time carnival attractions serve neither purpose. Whether or not more or less money is received the clean fair is a success.

## NATIONAL COUNCIL OF FARMERS COOPERATIVE MARKETING ASSOCIATIONS

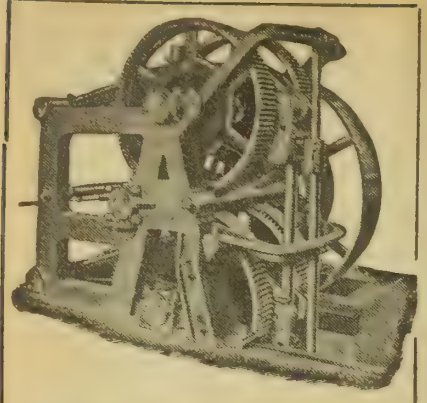
Invitations to send delegates to the first annual convention of the National Council of Farmers' Cooperative Marketing Associations have been sent to more than 200 cooperative marketing associations of the commodity type and more are to follow. This will be the first nation wide meeting of commodity cooperative marketing associations, or farmers business organizations for orderly marketing, ever held in the United States, and is scheduled for the New Willard Hotel December 14-16, 1922.

Among those already invited are the American Cotton Growers Exchange and ten state cotton growers organizations; the Northwest Grain Growers Associated of Portland and 16 state grain growers associations; six tobacco associations; six citrus fruit selling organizations; three dried fruit associations; ten wool growers organizations; eight livestock cooperative commission houses; seven apple, one pear, two grape, three berry, and several other fresh fruit organizations; 30 milk producers associations; 30 fresh vegetable and melon growers associations; four nut growers organizations; three rice associations, three bean growers associations; five hay growers associations; six poultry producers associations; and the remainder of the list of invitations going to organizations for the cooperative selling of maple sugar, ribbon cane syrup, grain sorghum, planting seed, canning crops, timber, honey, olives, alfalfa seed, mint and numerous other farm products that have been organized or are being organized for cooperative marketing methods.

All these cooperative organizations of the commodity type are being invited to send delegates or representatives. All farm papers and other periodicals are invited to send representatives to cover the convention and to take part in the side conference of cooperative education that will be a feature of the forenoon of the second day.

While one of the main features of the convention program is the consideration and recommendation from the standpoint of cooperative marketing associations of rural credits legislation, all the common problems of cooperative marketing will be discussed, and the problems common to the handling of each commodity will be discussed by group meetings of the representatives of organizations handling the same product.

Many prominent speakers have been invited to address the convention.



THE POMONA

Duplex Plunger Deep Well Pumps

are solving the pumping problems for many users during the period of low water levels. They will lift the water to the surface, and, if desired, deliver it to high elevations above ground and at lower power cost than any other system of pumping water.

# Agricultural Uses of Gypsum

By L. C. Holmes

(Mr. Holmes was for several years a soil specialist for the federal government, working with J. W. Nelson, now with the state college of agriculture. These two gentlemen are recognized as the highest authorities on soils in Western America.—Ed.)

A LINE of intermittently employed "soil improvers" hangs about the entrance to every plot of land given over to crop production. These figurative individuals are like human seekers for employment in many ways. Some of them come highly recommended from the neighbor's place as being specifically able to do certain things for certain crops under certain conditions, but as not being able to do certain other things. Others bear testimony that way off somewhere they did certain things but just exactly where it was, and under what conditions, fails to appear in the credentials. Sometimes nearly all the clamor set up amongst the applicants comes from a class of individuals who present nothing, but recommend themselves very highly as perfectly competent to do anything about the place, no matter what the soil or crop. These possible aids to the agriculturist get all sorts of receptions. Sometimes they are all invited in and set to work without supervision and so are all finally kicked out the back gate because the owner knows that in the aggregate they have robbed him. Closer study would have yielded him one or two honest employes fitted to his purpose. Again one look at the bunch makes some farmers bar the gate.

These comparisons may serve to indicate that each fertilizer or soil amendment has certain values and certain limitations which may or may not justify its use according to the soil and crop in question. Most soils can be improved in some manner; probably 90 per cent of western soils can be improved by increasing organic matter content, but intelligent use of fertilizers and soil amendments necessitates a knowledge of the local deficiencies or faults and the reasons for them, accompanied by a choice of the remedies, the latter based on a knowledge of what the remedy can or cannot do.

### The Place of Gypsum

The place of gypsum or land plaster in western agriculture seems to be guaranteed for certain purposes and is broadening in scope as experiments multiply. It has been used for centuries in some countries and it seems reasonable that with our diversified soils and crops there will develop increasing uses. For a long time it has been one of the standard aids in reclaiming "black alkali" land; that is, soil in which an appreciable per cent of the damaging soluble material content is sodium carbonate. This compound is hard to wash out of soils owing to the way in which it causes the surface soil to run together and seal over, thereby hindering the leaching process by which both the "black alkali" and accompanying compounds are washed out. The value of gypsum in such alkali land reclamation lies in its ability to combine with the black alkali chemically, thereby producing less harmful compounds which at the same time are more easily leached from the soil. It should be noted that this process of simply applying the gypsum does not at all decrease the total soluble material content in the soil. In fact soils carrying black alkali are practically always damaged as well by other compounds which require leaching from the soil. Gypsum, while a very valuable aid in reclaiming land, is rarely sufficient to effect the reclamation but must be succeeded by heavy irrigation or flooding and tillage in order to complete the process. Amounts varying from one to several tons per acre are necessary, depending upon the amount of sodium carbonate present which is necessary to change to less harmful and more readily removed forms.

The uses of gypsum and lime are sometimes confused. There are certain purposes for which they are not interchangeable. Lime can not be substituted for gypsum for alkali land reclamation as noted above. They are, however, both sources of the element calcium and are both valuable under certain conditions for improving the structure of tight, heavy or puddled soils which take water slowly and do not become friable and respond to cultivation satisfactorily. Lime alone, however, will correct acid soils, and gypsum can not be substituted for it. Some of the most valuable and extended uses of gypsum will propably appear upon the acquiring of more detailed information from an extended campaign of experiments with its use on varied soils and crops. It is quite generally recognized that gypsum has a favorable effect on many soils and crops, but the specific conditions where it can be definitely predicted to give good results cannot always be foretold; for instance, it seems to have a very definite value in liberating potash in the soil and stimulating bacterial activities of various kinds. An increasing interest in the whole subject of gypsum has been accompanied by many trials for numerous crops on different kinds of soil. Unfortunately many of these trials have not been planned or observed with due regard for the particular local conditions and consequently it is difficult to interpret the results. Conflicting results are to be expected when one contemplates the wide range of conditions in western agriculture, but heavy increases in yields of certain crops here and there indicate that there must be a considerable field wherein gypsum will finally become recognized as a special agent for benefit. Some questions of theory interpose also, such as the question of whether it is the sulphur in the gypsum or the calcium which gives favorable effects.

### Special Uses of Gypsum

One of its special uses may be mentioned in the decomposition of barnyard manures as an aid to fix and retain the volatile gases which are sometimes lost in excessive amounts. Citrus growers and nurserymen and others who receive manure in large amounts to be spread at some later time are making use of gypsum, but usually in too small amounts. It can be liberally applied around stables as an absorbent or deodorizer at the rate of a pound per animal per day or when turning the manure in piles to be applied at about the same rate.

Potato growers often use it to dust the cut seed as it dries the seed off, heals the cut surfaces, thereby preventing heating if the seed is to be held some time, and prevents sticking together in the planter. Lime cannot be substituted in this process owing to its ability to promote the growth of the organisms causing potato scab.

The above are some of the special uses of gypsum, valuable in themselves, but propably minor as compared with extended uses now being established. To the average alfalfa grower, truck crop producer and orchardist it may be said that in each of these lines there are many trials of gypsum which have yielded great benefit and other trials showing no appreciable effects. It is a sensible thing to try gypsum for many crops, just as numerous individuals are now doing, and determine for one's self the local needs of the particular soil and crop. Experiments to date are not sufficient to enable one to definitely predict results, but enough has been learned to justify the statement that there is a bigger place for gypsum as a soil improver than it now occupies.

## APIARY PRODUCTS AT ARIZONA STATE FAIR

Prizes were awarded in 20 classes. In two of these, extracted mesquite honey and Arizona made bee hives, competition was very keen. Awards were made to Nathan Hucklebee, B. S. Patterson, E. O. Etter, T. F. Wilcox, E. E. Tede, James E. Sudlow, S. M. Campbell, Ida L. Dickerson, Mrs. C. S. Brannock.

The Visalia plant of the California Prune and Apricot Growers has received 8,000,000 pounds of dried prunes. Deliveries are practically complete.

# Raspberry Culture

By Ernest Braunton

RASPBERRIES are grown in every section of the state but are nowhere so common or of such importance commercially as the blackberry. Yet they are more nearly a continous crop than the blackberry and fully as great a favorite. The raspberry is a little more exacting of soil moisture and perhaps less tolerant of climatic extremes than is the blackberry.

When it comes to varieties, nearly all others have retired and left the field to the Cuthbert, some years ago. But of late the St. Regis has been making steady inroads upon the planting, and it may in a year or two more surpass in acres planted the older Cuthbert. Nearly all growers having it admit it is equal to the other in every point, that it is slightly earlier and, of most importance, it fruits the first year of planting, which the Cuthbert does not. But the public does not know it by name very well and in purchasing usually calls for the better known sort.

There is a yellow seedling from Cuthbert, known as Golden Queen, that is becoming very popular. The older yellow varieties belonged to the small hard cap type, but the new one is large and luscious. Other named varieties are occasionally offered, and much is claimed for ones called King of Cliff and New Red. Among the black caps there is little choice for they thrive in but few parts of California; the Kansas Black Cap is as good as any.

### The Planting

The distance apart for planting varies among even the best growers, also the spacing in the rows. One of the most successful market growers places all his rows six feet apart; others place them at four feet. Some space plants in rows at four feet; others at three feet. Much depends on the trellis, pruning, and training. If one should attend the training closely enough he may be able to have rows but three feet apart.

When to plant is not so important, but December, January and February are the best months. Soil preferred is light rather than heavy. Plenty of well decayed organic matter will aid as much as it will with any crop. Raspberries, also blackberries, naturally grow along streams. The soil is moist, usually sandy and well mulched with dead leaves. Often the bushes are in shade. From this we glean that roots should be kept cool and moist. If they are moist they are usually cool.

### The Support

Nothing about the growing of berries is so variable as the supporting trellises. The most elaborate now called to mind is a field in the San Gabriel Valley. Redwood posts three by four inches are set in the row, five feet high, spaced 16 feet apart. On top of these are cross arms four feet long. This gives a T-shaped support. On the posts two wires are placed, about 20 and 40 inches high. Four wires are run on the top of cross arm. Very few build such trellises, and they are more advisable for blackberries and unnecessary for raspberries. Stout posts at the row ends, three or four feet high, with an occasional post for support in the row, with two wires, is good enough and not expensive.

The writer well remembers that 20 years ago the general advice given on all cane berries in regard to pruning was: "cut them off at 16 inches above the ground." This is still practiced on hundreds of acres in California. Of late years more have pruned each strong plant to four or five canes, each cane four feet high and the laterals on these canes back to one foot. In succeeding years cut out the old canes, leaving always the last year's growth for the new framework. The crop will depend less on pruning than on food. During the growing season cane berries are very hungry and thirsty and on food and water entirely does the berry crop depend. More than a score of insect pests trouble raspberries at times, at least four of them being scale insects. For these it is best to spray, during the dormant season, with commercial lime-sulphur, one part to ten parts of water.

---

## COOPERATION BY RAISIN GROWERS HAS RESULTED IN EFFICIENCY

(Continued from Page 579)

but in order to realize the necessity for quality production we must know how much depends on that quality.

### Quality Determines Prosperity

"Not only does this big business depend on the quality of raisins put out but, what is far more important, the happiness and prosperity of the 14,000 members and owners of this business, and on them and their prosperity depends to a very great extent the prosperity and success of every resident of the San Joaquin Valley. The cooperative spirit is growing and developing daily, and it is our aim to bring it to a point where each member of this organization will be personally interested in delivering at his packing house the highest quality of raisins he is capable of producing. If each member would do his best along that line, regardless of the fact that some selfish individual might be delivering an inferior grade for which he is paid approximately the same amount, every grower would soon by the mere weight of public opinion be compelled to deliver a real quality product, and with a quality product in the sweat box the manufacturing process would be reduced in cost and the problem of disposing of our ever increasing crops materially lessened.

"We have developed and this year are using machinery designed to eliminate stems, dust, etc., which is giving to the consumer the cleanest and best raisin ever shipped from California. The trade throughout the country recognizes the fact that we have raised the standard and when buying raisins from competitors insists on including in the purchase contract, 'quality must be equal to Sun-Maid.'

### Must Maintain Standard

"We have builded on a foundation of quality; we have talked it to the buyers through our advertising; we have preached it to the housewife and the baker; and we have appealed to the grower to make it possible for us to live up to the high standard of quality we have claimed for our product. We must depend to a large extent upon the expert knowledge and experience of you gentlemen to aid the grower in his effort to improve his quality and to thus sustain the enormous responsibility which rests upon this organization, and we ask you to help us foster and develop that spirit of cooperation, which is the only basis on which this organization can exist, so that each grower will do well that which is worth doing."

* * *

Raisin packing efficiency has kept pace with office efficiency. This was shown effectively at the time of the meeting referred to by a trip through Raisin City, the great packing plant. Everything from the nimble fingers of the Sun-Maids to the big automatic machines and carriers means the handling of dozens of carloads daily at lowest possible cost. Everyone autoing through Fresno should secure permission to see the great plant. It is operating every month in the year but of course its operations are shown in fullest magnitude at this time.

*Bean Triplex No. 727*

Capacity of 12 gallons a minute at 300 lbs. pressure. Low-down construction, Bean 6 H. P. Engine, short turning radius, and other new Bean features.

# New Easy-hauling Short-turning Sprayers

To meet the demand for sprayers that would haul more easily, turn in a shorter radius, and go under the lowest-hanging limbs without knocking off the fruit, we offer some very important improvements this season.

In all the larger sizes you can now secure a rig with the tank located in the rear and mounted over high wheels. This is made possible by the use of the high-speed smooth-running Bean Engine instead of the heavy "hit-and-miss" type of engine, which would not operate satisfactorily over a rocking front axle.

By reducing the weight and elitminating the vibration at the engine end, and by putting the big rear wheels with wide tires under the tank end, we've made the larger outfits very much easier to haul. By shortening the wheel base, we've made it possible to turn in a very short radius. And by using the new all-steel drop axle we've lowered the entire outfit several inches.

At the same time, we've retained all the sturdy, dependable features which have distinguished the Bean line for 38 years.

Send the coupon for new catalog which explains these new improvements, and describes the entire Bean line of Hand and Power Sprayers in detail.

The Bean Spray Pump Co.

121 West Julian Street San Jose, California

*Bean Simplicity No. 604*

Ideal for small grower. Capacity 5 gals. a minute at 250 lbs. pressure. Complete as shown with Pressure Regulator, Hose and Rod at $297.00

We built the first high pressure sprayer 38 years ago

BEAN SPRAY PUMP CO. 121 W. Julian, SAN JOSE, CAL.

# Cooperation

By W. R. Wood

THE leaders in the great agricultural industries have come to see the necessity of cooperation in the handling and marketing of farm products.

For more than a quarter of a century those deeply interested in this work have endeavored to bring the farmers together, but only partial success has rewarded their efforts. Today the need of cooperation by the farmers and fruit growers of the United States is more apparent than ever before. This is an age of cooperation. Big business industries are consolidating, the banking interests are merging, and the general trend of all business seems to be to get together. If farmers are to successfully compete for their full share of prosperity they must cooperate to protect and stabilize their markets.

The past few years have witnessed a great change in farming methods. A systematic study of soil and cultural practices, together with better and heavier producing varieties of both horticultural and agricultural crops, has greatly increased the quantity and quality of production. Haphazard hit and miss methods of farming are things of the past. The successful farmer of today finds that he must put as much thought and study into his farming operations as do any of the professional or business men in other lines. Farming has come to be a science.

The increased production due to the improved farming methods necessitates better and wider marketing facilities and a closer relationship between producer and consumer. It is one thing to grow a crop but quite another to successfully market it; however, the farmer has come to the point where he must take up the marketing problem, for the old order of things has changed and no longer can he turn his crop over to the produce dealer, the commission merchant or broker and have any assurance of receiving an adequate return for his labor. With all due respect to the integrity and ability of the middlemen, I can not help but feel that the farm marketing problem has grown too large to be handled in this way any longer. These people will always have their place in the distribution of farm products but they can not be expected to go to the expense of exploiting markets and building up a demand for the increased production when they have no assurance that they will be given the crops to handle or that some competitor will not enter the field they have exploited.

This has come to be the farmer's problem, and he must through his cooperative marketing associations find new markets and stimulate the demand in the old ones in order to take care of the increased production. Advertising campaigns must be inaugurated to increase consumption and a closer study must be made of the likes and dislikes of customers to the end that a product may be put up so as to create the most favorable impression on the consumer. Such undertakings can only be satisfactorily carried out by large cooperative organizations where the expense can be apportioned on the production of their members. The immense advertising and publicity campaigns carried on during the last few years by the California Fruit Growers Exchange and the Associated Raisin Company, in their endeavor to increase the demand for their products, cost millions of dollars, yet the cost to the individual members was hardly noticeable and was many times repaid in better prices for their products.

And right here I want to say that better prices to the producer does not necessarily mean higher prices to the consumer. On the contrary, if properly handled by cooperative marketing organizations, the cost to the consumer can oftentimes be reduced and at the same time a fair profit be returned to the producer. It is a lamentable fact that the consumer usually pays just as much for a commodity whether it brings a profit or a loss to the producer. This can and should be controlled by cooperative marketing organizations. In times of overproduction when a reduction in price is necessary, the consumer should receive the benefit of such reduction and not the middlemen. This would have the effect of increasing consumption and thereby more quickly bringing prices back to normal. In a word, cooperation means a better and more dependable commodity, larger and more evenly distributed markets and therefore better and more uniform prices.

When the rank and file of farmers come to realize the necessity for closer cooperation in the marketing of their products and cease to take chances on getting more on the outside than they can reasonably expect through their marketing associations, then and not until then will the business of farming be placed on a substantial basis and gain the recognition that it justly deserves.

# *The Harvester Company's Newest Tractor*

# McCormick-Deering 15-30

Smooth-running, long-lived, economical! Years ahead of any tractor heretofore produced! Naturally it remained for the Harvester Company, with long time tractor and farm machine experience and great resources, to bring out the one great epoch-making farm power value. The McCormick-Deering 15-30 stands in a field of its own—the logical choice for the man who wants the best in modern-day farm power.

## Ball and Roller Bearings at 29 Points

These dust-proof, quiet-running bearings relieve the McCormick-Deering 15-30 of all excess friction—at drawbar or belt work the power of the 4-cylinder, valve-in-head, kerosene motor is delivered without strain or drag.

In fact, every unit of the new McCormick-Deering 15-30 has been designed for long life, economy, full power, and operating comfort.

The McCormick-Deering 15-30, like all Harvester tractors, is an all-purpose farm power plant. It is equipped with belt pulley, large steel platform, wide fenders, throttle governor, adjustable drawbar, reliable brakes, and removable angle lugs.

*You will want to know more about this latest tractor achievement. Ask the McCormick-Deering dealer for complete details or write for our new catalog.*

## STAY WITH THE GAME

AT the recent dedication of the horticultural building at the university farm at Davis the future of the fruit industry was seriously—and hopefully discussed. The outlook for California's material increase of output is the brightest.

In discussing "Horticulture As a Career" James Mills, Jr. made comparisons of production from which these facts are gleaned:

In 1920 there were 44 per cent less fruit trees bearing and nonbearing in the orchards of the United States, outside of California, than there were in 1910.

**Nonbearing and Bearing in Orchards In All Other States of Union, Not Including California**

| | 1910 | 1920 | Decrease % |
|---|---|---|---|
| Apples | 213,576,136 | 147,229,603 | 31 |
| Peaches | 124,433,986 | 76,837,916 | 38 |
| Pears | 22,205,334 | 16,214,668 | 27 |
| Plums and Prunes | 21,614,834 | 15,821,652 | 27 |

**Increase in All Varieties Fruit Grown**

| | Increase % |
|---|---|
| Florida | 57.4 |
| Washington | 1.9 |
| Oregon | 11.1 |
| California | 29.6 |

Measured in dollars, the production of California fruit in 1919, 1920 and 1921, was 35 per cent of that of the whole United States.

**Production Per Tree**

Figured on a basis of the number of trees, bearing and nonbearing, in orchards in the United States, per the census of 1920, and the production in dollars of orchard trees, aside from grapes, for the year 1919, 285,326,973 trees bearing and nonbearing in or

# Protect your old Roof

If your roof leaks or is old and worn you can make it as good as new with

## SUPER-TEST

**FIBRE LIQUID CEMENT**

**—Guaranteed for 10 Years—**

It is unnecessary to build a new roof. SUPER-TEST will renew your old one and keep it in perfect condition. Easily applied. Flows evenly into smallest crevices and sets quickly into a firm, rubbery surface. Will not crack, run or peel under the hottest sun or severest cold. Cheaper than paint.

chards, in all of the United States, excepting California, produced $371,486,807 of tree fruits, making an average production in dollars of $1.30 per tree.

For the same year, 64,387,338 trees bearing and nonbearing in orchards in California produced in tree fruits, not including grapes, $202,037,218, or $3.13 per tree.

From a study of the salient factors influencing this great readjustment of the nation's fruit average, it cannot be said that California has so dominated the fruit producing business of the United States solely because of her splendid climate and her successful cooperative marketing associations. Her standing today would have been impossible with either of the above factors lacking. There is I believe, another factor which has been of primary importance in the fight for state supremacy in fruit production, and that is the human factor. Only a few years ago fruit growing was a very haphazard business. Only the areas of finest soil were planted; except in a few favored districts no irrigation was practiced; there were no marketing organizations other than those owned by private capital, and very little, if any, interest in scientific horticulture among the farmers ever manifested itself.

Since the building of the orange industry in Southern California we have been living in a new horticultural era. I will not take your time by reviewing the early history of orange growing in Southern California, other than to recall to your minds that many of the orange men of the south in the early days of the industry were big business men with capital to operate with. Most of them came to California to improve their health and took up orange growing as a hobby rather than a business, but their business training early enabled them to see that in farming as in other lines of endeavor, energy and brains counted in a big way. They had no knowledge of the best horticultural practices and as a result all of the work they carried on was dominated by the influence of the college of agriculture and her experimental stations throughout Southern California.

All of you know the wonderful progress that has been made in citriculture in the past 25 years. Proper cultural methods have been worked out, cooperative marketing associations have been established, and today the entire business has become so intensely developed that it resembles one of our largest manufacturing enterprises. Experts are required to handle every phase of the business. As a result of intensive horticultural practices, the orange growing district of the south has become one of the most prosperous of all the world's farming communities.

### LOS ANGELES CITRUS GROWERS PLAN CAMPAIGN

Th citrus growers department of the Los Angeles County farm bureau has outlined program of work for 1923. The better part of the day was spent in outlining these plans which constitute what is regarded as the most comprehensive program for the improvement of the citrus industry ever outlined by any organization. This program includes a strong membership campaign, cooperation with the various research and regulatory agencies which have to do with the citrus industry and extensive series of field activities in cooperation with the agricultural extension service and a continuation of a number of projects which the extension service and citrus growers department already have underway.

### HONORS RECOMMENDED

At the recent meeting of the California Avocado Association at Santa Ana a resolution was passed to ask the Lemon Men's Club to join in requesting "such leading educational institution as they may deem suitable" to confer a doctor's decree upon A. D. Shamel in recognition of his research and development work in horticulture.

An International Agricultural Congress will be held at Paris in May or June of 1923. This will be the 11th international congress and the first held since the war.

## it's chuck full of helpful planting hints

YOU ARE ALWAYS GLAD FOR SUGGESTIONS—like all progressive people, readers of California Cultivator are interested in helpful suggestions of all kinds. You will therefore be interested in THE 1923 ARMSTRONG CATALOG. IT IS CHUCK FULL OF HELPFUL PLANTING HINTS—on commercial or home orchard plantings—ornamentals, etc. Each variety is carefully described—all interesting facts pertaining to it are plainly stated—and you can depend on every word of it.

HAVE YOU ROOM FOR FRUIT TREES? Do you know that you can supply your table with choicest fruit from your own trees? You will find all best varieties illustrated and described in 1923 ARMSTRONG CATALOG.

WHY NOT BEAUTIFY YOUR HOME GROUNDS with suitable trees, roses and other ornamentals?

We sell DIRECT to you—you get just what you order—carefully packed and shipped the day plants are removed from the soil. The hardy, rugged character of ARMSTRONG NURSERY STOCK—together with the care used in raising and handling assures you the BEST THAT MONEY CAN BUY.

Mail orders receive careful and prompt attention.

TRADE MARK

# NITRATE OF LIME

13% nitrogen, equal to 15.8% ammonia

USE NITRATE OF LIME—
THE BEST RESULTS OBTAINED.

THE REASONS:
It contains NITROGEN in a form directly and immediately available to the plants.
It supplies the soil with highly soluble LIME, which improves and corrects the physical condition of the soil.
Write for booklet—free—giving complete information.

NOW READY!
A Better—Faster Cutting Log Saw
Cuts Up Branches
Cuts Down Trees Level With Ground
2 H-P
The New 1923 Model OTTAWA makes it easy to saw logs, fall trees and buzz up branches. 350 Saw Cuts a minute—world's fastest, most powerful, light weight, easy-to-move log saw. Saves work and makes you money. Soon pays for itself.
$91.50
F. O. B. OTTAWA
$97.25—Pittsburgh
Mechanically Operated Valves
Now, inlet as well as exhaust valve opened mechanically-like automobiles and tractor motors-not used on other log saws. Starts easy; develops more power. Exclusive 1923 Model OTTAWA Log Saw feature.
OTTAWA 1923 MODEL LOG SAW
Saws as 2 Men Would only many times faster. This year built in two sizes, 2 H-P and 4 H-P Friction Clutch, Throttle Governor; Burns Kerosene—saws 10-inch logs as well as 5-foot logs.
Uses Less Fuel
One Man Log Saw
Quick Shipment from factory or nearest of 9 branch houses.

# Questions and Answers

**Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.**

### Not Suitable for Walnuts

First of all let me express my appreciation for the help your paper has been to me. Then, as a regular subscriber I want to avail myself of some expert advice. In the spring of 1921 I set out some 60 Eureka walnut trees, and they have done very well considering, having passed through some severe tests due to killing frosts and several floods. Several of the trees had nuts on them this second season. Early this year I planted another 200 Eurekas and the majority of them were set back by the killing frost we had in May. I still have about ten acres but am not sure whether it would be best to plant all to Eurekas or vary my program by planting either the Placentia or the Ehrhart varieties. I have some Placentia trees on my place and they seem to be as thrifty as any seven or eight year old trees should be, but I understand that the Ehrhart is a better nut and has several advantages over the Placentia. Keeping in mind that my planting will be done in a canyon, elevation about 1300 feet, therefore subject to both early and late frosts, and to great summer heat, (although the heat is actually very much modified by the constant daily circulation of the air due to the pronounced winds which blow through the valley), will you please advise me which variety it would be best to plant as an alternative to the Eureka. Since the new planting will be to windward of the present grove what effect will the pollen from Placentias or Ehrharts have upon the Eureka nuts? Will this affect their market value? Seeing that the Ehrharts produce better sealed nuts than the Placentias and a greater quantity than the Eureka, year by year, the only thing left to consider is their respective marketability and value. Will you give me some exact information on this point?—Subscriber, Riverside.

This location is evidently not suitable for walnuts because of the late spring and early fall frosts. The Eureka walnut is among the very late leafing varieties and if it gets caught with late spring frosts there is not much hope for other varieties. Then an early frost before the leaves are ripened in the fall prevents the new growth from maturing and makes dead wood for the next spring. The new planitng being to windward of the other trees will not affect the value of the nuts on the earlier planted trees as cross pollination affects only the variety that might be obtained by planting the cross pollinated walnuts. The Ehrhart walnut being among the early leafing varieties would not be better than the Eureka in this location.—J. B. N.

### Selling Olives in Bulk

Will you please advise me in regard to selling olives in bulk? That is, can I sell olives without canning and cooking?—Subscriber, Hemet.

Under the regulations of the state board of health olive producers are prevented from selling processed olives unless they have been subjected to a temperature of 240 degrees for 40 minutes. Of course the only way to secure a temperature of 240 degrees is in a pressure cooker. In actual practice, however, we have been able to buy olives in bulk, and we understand these have not been subjected to the 240 degrees. We do not know what steps are being taken by the board of health to enforce this regulation.

### Pruning Peaches

When is the best time to prune peach trees? I have heard that at a certain time pruning will make for tree growth and at another time of year will make for fruit growth. Please tell me about it.—Subscriber, Fallbrook.

After all green leaves are gone is the proper time to prune all deciduous trees. While a green leaf remains it is making food for the tree. December and January are the best pruning months. The story you have heard doubtless relates to summer pruning for fruit and winter pruning for wood; there is nothing in it. So prune as to allow and encourage a normal wood growth, but the real purpose of pruning is to get the largest possible crop of best size and quality.

### Brown Rot on Apricots

Much has been written concerning brown rot on apricots. Has any subscriber found a spray which will overcome brown rot on sugar prunes? Any information concerning same will be greatly appreciated.—Subscriber, Redwood City.

As far as we know there has been nothing new developed in the control of brown rot of prunes. An article by Prof. H. P. Barss of the Oregon agricultural college, appearing on page 578 of the Cultivator of April 3, 1921, suggests the use of the Bordeaux mixture with casein spreader, to make tne solution adhere to the fruit. This spray, he says, should be applied about a month before maturity of the fruit.

### Growing Plants For Sale

In answering an inquirer as to growing of plants and seeds for market and also selling independently, we recently stated in this department "No license is needed." This is true as to producing plants and selling direct to a licensed dealer or nurseryman, but if one wishes to sell direct from the ranch to the consumer, then, technically at least, the farmer becomes a nurseryman and must comply with provisions of Section 2119 of an act which prescribes the policy of the state as to administration of laws through the department of agriculture, especially those laws relating to the selling of nursery stock and seeds: "Any nurseryman, agent, jobber, person, firm or organization operating in the state of California, who ships, sells or handles nursery stock, trees, plants, shrubs or vines which are for planting or propagation purposes within the borders of the state shall first obtain a license, etc." The fee is $5 plus 50 cents for each acre of growing nursery stock after the first acre. Any one proposing to enter the business should write the state department of agriculture at Sacramento for more explicit information and a copy of the act.

### L. A. Milk Regulations

To whom should I write to obtain a copy of the dairy regulations in Los Angeles County? I wish to deliver bottled raw milk.—Subscriber, El Centro.

Write to Dr. Powers, L. A. City Health Department

### Hogs for Pork

I am raising hogs for pork. Please give me names, if any, of hog raisers who are producing pork upon a scale of handling 50 sows or more, not however as garbage disposal proposition, and not as strictly purebred breeding stock sales. I want to see other ranches and compare notes on equipment, crops, feeding and management matters with the owner or operator.—Subscriber, Modesto.

Successful hog raisers near you are the Bassett Brothers of Hanford. The Bassetts have been in the hog business for nearly 30 years, and while they have sold a world of breeding stock they have also provided pork for a multitude in that time.

### Camellias

When and how is best time and way to start camellia plants?—Subscriber, Yountville.

Seedling camellias are seldom of much value, not one in a hundred being of the least commercial value so far as flowers are concerned. They are used for stock upon which to graft or inarch the named varieties. Plants imported from Japan are inarched; those from Belgium or grown in this

country are grafted. They are extremely hard to propagate in this way and the amateur is advised against the attempt unless having a strong liking for such experiments. The early spring months, when sap is free, is best time, and plants must be kept in shade. The graft will be very slow in taking as camellias are slow "actors."

### Walnut Bleach

In the Cultivator for October 8, 1921, Question and Answer column, appeared directions for bleaching walnuts. I tried to bleach some last fall by dissolving the sal soda in boiling water and adding the chloride of lime to the solution after cooling but could not get a smooth mixture. This fall I added the chloride of lime to the sal soda solution while it was boiling hot and continued the boiling for about 15 minutes, (using four gallons of water to one-fourth of the ingredients called for), then after cooling, strained it and added the remainder of water. There was considerable sediment that the water seemed to have no effect on, so I strained off the clear part and used it. Sulphured the nuts about one hour in a very light sulphur smoke and put them in the sun to cure. Would like to know proper method of mixing the bleaching solution and also amount of sulphur to use and length of time to leave in sulphur box. I use the sulphur box of my apple drier.—Subscriber, Sebastopol.

The formula referred to is as follows: Twenty-four pounds chloride of lime and 6 pounds monohydrate crystals of soda to 50 gallons water; the monohydrate dissolves in cold water while sal soda has to be boiled. By sulphuring very lightly after dipping while the nuts are still wet with the solution a much whiter nut is secured. The process used is all right, but apparently the nuts were not thoroughly dry. They should be perfectly dry before bleaching is attempted.

### Storing Olives in Brine

Will you please tell me through the Cultivator if fresh olives from the tree can be kept in brine and processed as wanted. If so, how long can they be kept in the brine and how strong should it be?—Subscriber, Lindsay.

This question was referred to W. V. Cruess of the University of California, and he answers:

"In regard to the preservation of olives in brine I would make the following suggestion: Dissolve three-quarters pound of salt in each gallon water to make a strong brine. When salt has thoroughly dissolved place olives in stoneware jar or barrel and cover them completely with the brine. Place board or large plate on olives to keep them submerged in brine. Store until it is convenient to pickle the olive by the recipe given on Page 589."

### Concord Grapes

Time was when Californians, in derision, dubbed the eastern Concord grapes as "slip-skins." Visitors from eastern states retaliated by saying: "You call 'em that because you can't grow 'em." But really, California did not try to grow them because we have so many grapes which, in the opinion of the majority of our people, are considered superior. But the Concord is now being grown more than ever and each year the acreage becomes greater. Near El Monte, in Los Angeles County, one grower sold $3,600 worth from a three-acre vineyard, surely a good return. In many sections they thrive equally as well as any European variety.

### Mulberry Fruits Drop

I have a weeping mulberry which set a lot of fruit but all drop off before ripening. What is the cause?—Subscriber, Ceres.

We can not state with certainty what has caused this drop for we do not know under what conditions your plant is grown. The most common cause of fruit dropping is lack of water. As mulberries grow in bottom lands, often where roots reach to the water level, and the weeping variety thrives best in lawns, it is a safe guess to state that lack of water caused the drop.

### Generating Electricity on Farm

I have a creek on my place that gives six inches of water in the dry of the season and of course plenty of water in the winter. I have about an 85 foot drop to the barn and dairy house and I want to know how I could rig it up to use water power to run my cream separator, churn and also a little lighting plant with this water. The 85 foot drop is all within a quarter of a mile from the barn. I would like to know what size pipes I should use and what kind of a turbine, etc. Hope that you can help me out.—Subscriber, Oregon.

It is possible this supply is not sufficient to justify installation of water wheel and dynamo. However, we note that the minimum flow is about 6 inches, and it is probable that the greater part of the year this would give sufficient for home use. In addition, it is possible that by carrying below the level of the house and securing a greater fall additional power may be secured. In this particular a hydraulic engineer, if available, could give best information. However, the question was referred to an electrical engineer of the General Electric Company, and we have from F. F. Bloomer of that company the following:

"This project does not appear to be very promising for developing hydro-electric power and light. The theoretical horsepower in a stream of six inches with an available drop of 85 feet is but slightly more than 1 horsepower. Taking into account losses in a pipe line and in the machinery the actual available power would be very much less, so that the desirability of the installation would be open to serious question. In order to definitely determine the possibilities of a project of this sort it is desirable, first, to check the matter up with the manufacturer of a water wheel. Then after the hydraulic problems have been solved the electrical manufacturer can figure on the electric generator, etc. A small plant would probably cost $250, more or less, without considering installation. It will be appreciated that this figure is a mere approximation, however. If the subscriber is within reach of a power company's lines it would be much preferable to secure electricity from that source than to attempt to develop his own plant."

### TELL YOUR GRATITUDE

It isn't the thinking how grateful we are
For the kindness of friends come to bless
Our sorrow or loss
'Neath the weight of the Cross;
It is telling our gratefulness.

It isn't the love that they have in their heart
And neglect or forget to reveal,
That brightens the lives
Of husbands and wives;
It is telling the love that they feel.

It isn't the thinking of good to mankind
That comes as a cooling drink
To the famishing ones
Of Earth's daughters and sons;
It is telling the good that we think.

It isn't the music, asleep in the strings
Of the lute, that entrances the ear,
And brings to the breast
The spirit of rest;
It is only the music we hear.

It isn't the lilies we hide from the world,
Nor the roses we keep as our own,
That are strewn at our feet
By the angels we meet
On our way to the Great White Throne.

It isn't the silence of hope unexpressed
That heartens and strengthens the weak
To triumph through strife
For the great things of life;
It's the words of good cheer that we speak.—W. J. Lampton, in the New York Herald.

### STEENA'S AMERICAN THANKSGIVING

(Concluded)

"I wasn't here when none of it happened," she explained. "It was toward night and the chores was done and so was supper. I went to town, to the movies, with my cousin Emma's girl. It seems like that the first person who noticed the smoke or the fire or anythin' was the Briby girl. She come running over and into the kitchen where Jim and Larry was settin' and she told them that the place was afire. It was the tool house that took first and then the hen house caught, and the sparks were like to get the rest of the outbuildings, only Briby's girl, she runs to the phone and in less than no time, I guess the whole countryside must have been here and she a'tellin' them what to do."

"Do you mean Steena Birby?" George asked quickly. Briby's girl might have meant Cousin Anna.

"Yes, her."

Mrs. Kerry looked sharply at her son. The radiant light that flashed over his features told her that a year of separation had accomplished nothing and her heart gave a quick bound that was almost a stab of self reproach. She hardly heard the rest of Mrs. Maguire's rambling narrative of how Steena had saved the barns, how she had worked with the men, directing, inspiring them, hair and face covered with soot, her eyes red, her throat choked. Vaguely she heard one of the hired men say that Steena was a "hero," and "ought to get a medal or somethin'."

What filled her mind was the fact that George loved Steena and she wondered if the girl really loved him. If only she had been less of the "immigrant type," if only she had been a more fitting wife for George. Well, at any rate, she must go over and thank her for her splendid service. Perhaps on the way an inspiration would come to her.

George and the hired man had made for the barns. Mrs. Maguire was busily scolding over the fact that she had not received Mrs. Kerry's telegram until so late that it was impossible to do even a tenth of the usual amount of Thanksgiving cooking.

"No turkey killed, no mince meat made, no decent crust rolled up for a pumpkin pie, not a cranberry in the house, no—" she went on but Mrs. Kerry did not even hear. She put on her hat and coat and started out for the Briby house, walked down the driveway to the kitchen door and knocked. Cousin Anna answered.

"I've come to see Steena," she said softly.

"Yeh, Steena she only go upstairs a minute ago to get changed from her work dress. I call her. Come in," and she led the way past the roomy dining room with its fine old furniture and its homely displays of china and glass, into the living room. There Mrs. Kerry waited.

She was rather surprised as she looked around the room. It was so comfortable, so tasteful. There was an air of home about it that she had not thought to find in the parlor of a "foreigner." She had been under the impression that the "parlor" was a place opened only on state occasions but this room evidently was used constantly.

She was still wondering when a quick step sounded in the hall and Steena entered. She seemed taller or was it the fit of her tailor made dress? Certainly, she was better looking than ever with a new note of refinement. Mrs. Kerry noted the fact before the girl had really entered the room.

"How do you do, Mrs. Kerry?" The younger woman's greeting was gentle and respectful.

"I'm quite well, thank you, Steena—Miss Briby," Mrs. Kerry had risen and taken the girl's hand. "I've come to thank you for what you did the other night. I really feel that it is to you we owe our home—our barns. It was a narrow escape. But for you——"

"I'm glad to have done it," the girl said simply, "we are all neighbors, friends and we must help each other always."

"Yes! And—Steena, there is something else about which I wished to speak to you." Then the words failed. She had been so full of what she meant to say, so excited, that for a minute she was not impressed with something that she should have noticed at once. Steena's English! It was perfect! There were none of the odd, broken phrases, nothing ungrammatical. She looked intently at the girl as if to be sure that this was really Steena.

"I—I wanted to tell you," Mrs. Kerry hurried, "that—I am sure—my boy—still cares for you. I did not know it. I did not think that you even thought seriously of one another, until this morning. His joy when he heard that it was you who had saved the barns well, it told me the truth. And—as for your being good enough—Why—" she stopped, confused, then, suddenly cried, "Steena! you've changed—how you've changed!"

The girl's musical laugh rippled through the room. It was the laugh of one who "laughs last"—a happy laugh of some unspoken victory.

"Yes, I have changed—all of us have changed, dear Mrs. Kerry. And I know what you came to tell me this morning; that you are sorry you spoke—that you did not mean to be unfair, unkind, that you were protecting your son. I know, Mrs. Kerry, and you were right. I was not good enough then!"

Mrs. Kerry did not know what to say but she took the girl's hand in both of hers.

"I told you that morning that I would think it over and talk with you again," Steena continued, lovely in her happy calm. "I did think of all you had said and what it meant and there was nothing to say to you—then. I sent George away each time he called. That morning after you left I said to myself that I would be good enough for him.

"I saw that while my people and I had come to this country, found happiness, comfort and almost riches, we had not become a part of the country. We could not even speak its language properly. But we could learn, my brother Ole, my father and I. We all talked it over and started at once. We went to the county seat and took out our first naturalization papers. We studied, we even went down to Chicago to take a short course. We read. Every day we were better Americans. You see, some day I wanted to be good enough."

# Which is Larger the Sun or a Cent

R-A

**Underwear**

**Warm**
**Durable**
**Comfortable**

ON the farm, only knit underwear will give the warmth and wear required, and R. A. Underwear excels all other makes because it will last for two or three seasons if properly laundered—because its generous, fleecy fabric gives full warmth, even in the coldest weather.

The long, wide, curved gusset gives room where room is needed and prevents gaping. The seams will wear as long as the fabric itself.

R. A. Underwear for Children is equal to the women's garments in warmth and wear, and has the special features of fullness in the seat and special button holes which stay buttoned.

You will want R. A. as soon as you see it, so ask the clerk at your store to show you all the R. A. Points of Excellence.

**J. C. ROULETTE & SONS**
**HAGERSTOWN, MD.**

"Steena!" Mrs. Kerry's eyes filled with tears and she put her hands in a caress on the girl's shoulders. "Steena, you're wonderful! And I—I was very cruel. I should have thought of that—I should have helped you. You must have been very unhappy."

"Unhappy? No. Lonely sometimes but not unhappy. I was doing right! I sent him away—it was best but I knew that the hour would come when I would have him back. When I was most lonely, I worked hardest."

"I shall have to tell him the whole story, even though he hates me afterwards," Mrs. Kerry said softly.

"No, that is my privilege. I will tell. She stopped suddenly, her eyes filled with a lovely light. "I know what you can do. It is Thanksgiving! You stay here. It will soon be time for dinner, an American Thanksgiving dinner. I will go and get George, and we will celebrate it together, the two families." Her eyes danced and the color flooded her cheeks as her heart raced for happiness. "You can help Cousin Anna with the table, and tell her how well she has learned to cook. You see, we have become such Americans that we celebrate the American holiday in the most American way. There is turkey, cranberry sauce, roast apples, pumpkin and mince pies, everything! You will stay? You will let me go and get George?"

An hour later, when Mrs. Kerry and Cousin Anna were beginning to fuss over the fact that dinner was ready for the table, and would spoil if not eaten in the fairly immediate future, Ole Briby, who had been his sister's confidant and had spent the past hour grinning in delight, announced that Steena and George were coming in by the front gate, "hand in hand." Mrs. Kerry ran to meet them. From just outside the kitchen door she heard Steena's laugh and the sudden sound of her boy's voice seemed as an echo of her thought.

"Hello, mother!" George shouted in happy abandon. "Say, everything over at the barn is O. K. Steena tells me we're going to have a Thanksgiving turkey after all. That's something to be thankful for!"

"Something to be thankful for? Mrs. Kerry echoed his words. Perhaps neither of them was really thinking of turkey but of love—the love of a man for a maid and a maid for the country of her adoption.—The Farmer's Wife.

## HOME PICKLING OF RIPE OLIVES

**By W. V. Cruess, Fruit Products Laboratory, University of California**

Use prime ripe fruit in good condition, preferably that which is light pink to cherry red in color. Avoid green or bruised olives.

### Stock Lye Solution

Prepare a stock lye solution by dissolving one pound of soda lye in two gallons of water, or one-half pound in one gallon of water. Babbit's, Red Seal, or other reliable lye is satisfactory.

Caution: Do not use this solution direct on the olives. It is to be diluted as directed below.

If skin of hands or face is burned with lye apply strong vinegar at once.

### First Lye Treatment

Place olives in stoneware, glass or wooden container. Prepare lye solution containing two ounces lye per gallon by mixing two pints stock lye solution, as above, with six pints water, or in this proportion.

Cover olives with this lye solution. Stir every half hour. Cut samples of the olives at hourly intervals, and when it is observed that the lye has thoroughly penetrated the skins of all the fruit and about one-sixteenth inch into the flesh, remove and discard the lye. Lye discolors the skin and flesh to the depth of penetration. A little experience will make it possible to follow the lye penetration readily.

Usually about four to six hours time is required. It will be more or less according to the temperature of the lye solution and the toughness of the olive skins.

### Darkening Color by Exposure

After removal of lye solution allow the olives to stand uncovered in the tub or crock and stir three or four times daily. Continue this treatment until the olives are black or very dark brown in color. This will normally require about five days.

### Second Lye Treatment

Prepare lye solution containing one and one-fourth ounces of lye per gallon of water, by mixing two and one-half pints of the stock lye solution (first lye treatment) with 13½ pints (one gallon and 5½ pints) water to give two gallons of solution.

Cover the olives with this solution. Stir occasionally. Leave until the lye solution has penetrated completely to the pits of the olives as shown by discoloration of the flesh of samples cut to the pit with a knife. This will usually require eight to 12 hours, and the solution can, if desired, be left on the olives overnight.

This treatment is for the purpose of destroying the bitterness.

### Washing

Remove and discard lye solution. Cover olives with water. Change water twice daily until olives are free from lye taste. This will require about seven days.

### Brine Treatment

Cover olives with brine of one-fourth pound salt per gallon of water, or one pound per four gallons water. Allow to stand three days. The olives are now ready to serve or can.

### Canning and Sterilizing

Pack into sanitary cans or jars. Add boiling hot brine of one-fourth pound

NEW KEROSENE LIGHT BURNS
94% AIR
Beats Gas or Electricity
BURNS 94% AIR
TEN DAYS' FREE TRIAL
Over 3,000,000 Satisfied Users
Make your home bright and cheerful, saving one-half on oil. Scientific tests prove this wonderful new Aladdin five times as efficient as the best round wick open flame lamps. Sixty candle power pure white light for 50 hours on a gallon of common kerosene. No odor, smoke, noise or pumping up. Won't explode. Guaranteed. Prove to yourself by free trial that Aladdin has no equal as a white light. If not satisfied return at our expense.
Get Yours Free — We want one user in each locality to whom customers can be referred. In that way you may get your own without cost. Be the fortunate one to write first for 10 day free trial offer and learn how to get one free.
$1,000 REWARD — Will be given to anyone showing us an oil lamp equal to this Aladdin in every way. (Full details of offer given in circular.)
Agents Wanted — To demonstrate the Aladdin in territory where oil lamps are used. Experience or capital unnecessary. Many agents average five lamps a day and make $500 a month. Write quick for territory and samples.

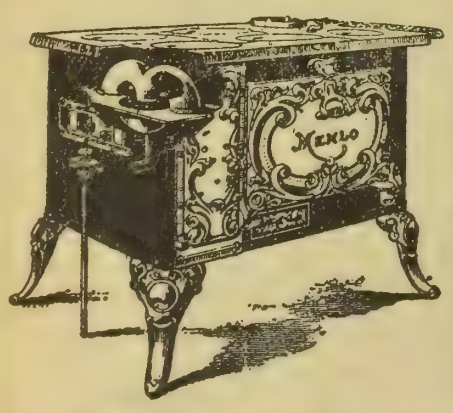
# Cheapest Heat You Can Buy



The Sievert Oil Burner burns either distillate or kerosene oil in cook stoves, heaters, furnaces, pasteurizers, boilers, prune dippers, dairy sterilizers, etc. Absolutely safe, odorless, very convenient and low priced. MAKES HEAT AT HALF WHAT WOOD and COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address

## SIEVERT OIL BURNER CO.

710 North Main St. Los Angeles

Your appreciation of the California Cultivator can be shown best by writing to and buying from Cultivator advertisers.

salt per gallon. Seal cans with hand can sealer Place rubbers and caps on jars loosely. Place in steam pressure sterilizer (obtainable from any hardware store) and sterilize 40 minutes at ten pounds steam pressure (240 degree Fahrenheit). Allow pressure to fall to 0 for jars, before pet cock or lid of sterilizer is opened. Remove jars and seal. Cool cans in water.

### Alternative Method

If a can sealer and pressure sterilizer are not available pack olives in glass jars and place lids and rubbers on loosely. Place in wash boiler sterilizer and heat at boiling point one and one-half hours. Count time from time water is violently boiling. Remove and seal.

Caution: Olives preserved by this alternative method must be boiled in water for 40 minutes or more after jar is opened. Under no conditions can such olives be offered for sale without violation of state law.

## HOUSEHOLD QUERIES

### Thanatopsis

Will you please print Wm. Cullen Bryant's "Thanatopsis" in the columns of the Cultivator?—Subscriber, Burbank.

#### THANATOPSIS

To him who in the love of Nature, holds
Communion with her visible forms, she speaks
A various language; for his gayer hours
She has a voice of gladness, and a smile
And eloquence of beauty, and she glides
Into his darker musings, with a mild
And healing sympathy, that steals away
Their sharpness ere he is aware.

When thoughts
Of the last bitter hour come like a blight
Over thy spirit, and sad images
Of the stern agony, and shroud, and pall,
And breathless darkness, and the narrow house,
Make thee to shudder, and grow sick at heart;—
Go forth, under the open sky, and list
To Nature's teachings, while from all around,
Earth and her waters, and the depths of air,
Comes a still voice:

Yet a few days and thee
The all beholding sun shall see no more
In all his course; nor yet, in the cold ground,
Where thy pale form was laid with many tears,
Nor in the embrace of ocean, shall exist
Thy image. Earth, that nourished thee, shall claim
Thy growth, to be resolved to earth again;
And, lost each human trace, surrendering up
Thine individual being, shalt thou go
To mix forever with the eelments,
To be a brother to the insensible rock,
And to the sluggish clod, which the rude swain
Turns with his share, and treads upon. The oak
Shall send his roots abroad, and pierce thy mold.
Yet not to thy eternal resting place
Shalt thou retire alone, nor couldst thou wish
Couch more magnificent. Thou shalt lie down
With patriarchs of the infant world, with kings,
The powerful of the earth, the wise, the good,
Fair forms, and hoary seers of ages past,
All in one mighty sepulcher.

The hills,
Rock ribbed, and ancient as the sun; the vales,
Stretching in pensive quietness between;
The venerable woods; rivers that move
In majesty, and the complaining brooks
That make the meadows green; and, poured round all,
Old ocean's gray and melancholy waste,
Are but the solemn decorations all
Of the great tomb of man. The golden sun,
The planets, all the infinite host of heaven,
Are shining on the sad abodes of death,
Through the still lapse of ages.

All that tread
The globe are but a handful to the tribes
That slumber in its bosom. Take the wings
Of morning, and the Barcan desert pierce,
Or lose thyself in the continuous woods
Where rolls the Oregon, and hears no sounds,
Save his own dashings—yet—the dead are there;
And millions in those solitudes, since first
The flight of years began, have laid them down
In their last sleep: the dead reign there alone.

So shalt thou rest; and what if thou shalt fall
Unnoticed by the living; and no friend
Take note of thy departure? All that breathe
Will share thy destiny. The gay will laugh
When thou art gone, the solemn brood of care
Plod on, and each one as before will chase
His favorite phantom; yet all these shall leave
Their mirth and their employments, and shall come
And make their bed with thee.

As the long train
Of ages glide away, the sons of men,
The youth in life's green spring, and he who goes
In the full strength of years, matron, and maid,
The bowed with age, the infant in the smiles
And beauty of its innocent age cut off—
Shall, one by one, be gathered to thy side,
By those who in their turn shall follow them.

So live, that when thy summons comes to join
The innumerable caravan, which moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to thy dungeon, but, sustained and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams.—William Cullen Bryant.

## HINTS FROM HOUSEKEEPERS

### Old Fashioned Salt Rising

Noting requests for methods of making salt rising bread I am sending a century old recipe which has been used in our family.—Reader, Los Angeles.

At noon, the day before baking, take one-half cup cornmeal and pour over it enough sweet milk, boiling hot, to make it the thickness of batter cakes. Keep warm. The next morning pour into a pitcher one pint of boiling water, add one teaspoon soda and one of salt. When cold enough so that it will not scald the flour, add enough to make a stiff batter, then add the cup of meal set the day before full of bubbles. Place the pitcher in a kettle of warm water, cover and keep warm. When the batter rises to the top of the pitcher pour it into a bread pan and add one and one-half pints of warm water and flour enough to knead it into loaves. Knead but little harder than for biscuit dough and bake as soon as dough rises to the top of pans. This will make five large loaves.

# Keep Those Old Paint Brushes Working

Just because paint has been allowed to dry in a brush, its usefulness has not ended.

Clean it and put it at work again on those odd jobs of painting.

SAVABRUSH Cleans Old Brushes

—cleans them quickly, easily and economically. Just soak a few hours in SAVABRUSH solution and wash in the usual way.

35c buys a package that will clean half a dozen. Your paint or hardware dealer will supply you. If not send his name for liberal FREE SAMPLE.

# Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When queries are wished in Cultivator address query to 317 Central Ave., Los Angeles.

### Safeguarding Water Right

I am the only resident land owner in a small valley and have developed two wells which pump into a reservoir. There is no running water except an occasional storm flood, but there is a considerable underground stream. What are my rights as the only bona fide resident in the section, and how can I safeguard myself?—Subscriber, Riverside.

Insofar as the appropriation for beneficial use of water is concerned residence has nothing to do with priority or right of use. As you have developed this water and placed it to a beneficial use, you undoubtedly have an absolute right to the use of the amount you are placing to such use. There is no method by which this right may be more safeguarded than you have already taken, other than, perhaps, to take the matter up with the state water commission which may make an investigation and register your appropriation.

### Vineyard Not as Represented

A few months ago I purchased land which I was told was planted to Emperor grapes and Tilton apricots. I now find a large number of Malagas among the Emperors. Have I any legal redress?—Subscriber, Terra Bella.

You are entitled to bring action against the one who sold you this property for the difference between the value of the property as represented and that which it actually has; that is to say, if there is a difference between the value of Malaga grapes and Emperor grapes you could recover that difference. It probably is too late, at this time for you to take any action by way of rescission of the purchase.

### Trespassing Animal

My neighbor has a scrub bull. My stock is all pedigreed cattle. The bull broke down the fences and caused considerable damage. What are my rights?—Subscriber, Longvale.

As heretofore stated, the rule with regard to trespass of animals depends largely upon the particular county in which the party is located, but the general rule is that where land is planted to crops and at the time entirely enclosed by a substantial fence, in case of trespassing animals the land owner may attach animals and recover whatever damage is caused. Even though your property is not devoted to the raising of crops, but rather to cattle, you would doubtless have an action for damages against the owner of the bull for any and all damage caused by his breaking through the fence. You probably would not be entitled to the exemption from filing an undertaking, as specified in the estray act, but that is comparatively a small matter if the party has property subject to execution.

### Exemption from Attachment

How long does it take a book account to outlaw? What property is exempt from attachment? As I own an acre of land and live on it, can it be attached?—Subscriber, Van Nuys.

An action to recover on a book account, whether consisting of one or more entries, upon an account stated or balance due upon mutual open and current account may be brought within four years, and the time begins to run, where there is more than one item, from date of last item. There are very generous exemptions from attachment which are too long to here state; generally, all necessary household furniture, farming utensils, two horses or mules and harness, cart or buggy and two wagons, food for such animals for one month, or seed grain on hand for planting within ensuing six months not exceeding value of $200, 75 beehives, tools or implements of mechanic, cabin or dwelling of miner, fishing boat and net, poultry not exceeding value of $75, earnings of judgment debtor for personal services rendered at any time within 30 days next preceding levy of attachment, when such earnings are necessary for use of his family residing in the state, except in case action is for common necessaries of life, and then one-half such earnings, material not exceeding $1,000 in value purchased for use in construction or repair of any building, money received by pension from governments, besides several other matters are exempt. If the debtor owns land and resides upon it with his family he can file in the recorder's office a declaration of homestead, in which case such property is exempt from execution up to the amount of $5,000.

### No Will

If a man dies without leaving a will can the widow administer the estate or would it have to go to court? What share has the widow? Do step-children come in for a share?—Subscriber, Pomona.

Step-children of the husband have no claim; only his own children. If the decedent leaves a surviving wife and one child, then the property goes in equal shares to the wife and the child. If there is more than one child, then the property goes one-third to the surviving wife, and the two-thirds are divided equally between the children. This applies to the separate property of the husband. The wife, of course, has her right to one-half of the community property, the remainder of which is administered as separate property. It is necessary that the estate be probated in order to effect a proper settlement and place the title. This is especially true of real property as otherwise there is nothing to show of record as to the death of the decedent. See also answer to "Children of Two Marriages."

### Children of Two Marriages

When I married I had some property which was not paid for but was paid during marriage. My wife died and I then accumulated more property. I married again and desire to know what would become of the property in case of my death without a will. There are three children by the first wife and also children by the second wife.—Subscriber, Halleck.

It appears from the statement that all property is the separate property of the husband, all having been acquired prior to the marriage to the second wife. That being the case, all of the property is subject to the will of the husband. Upon the death of the first wife, the entire property, whether considered as separate property, prior to that marriage or as community property after marriage, went without administration to the husband. In the case of the death without will, therefore, the second wife would succeed to one-third of the property and the remaining two-thirds of the property be divided among the children of both the first and second marriage, considered without reference to such marriage, as the half blood inherit equally with the whole blood.

### SHORT COURSE IN DECIDUOUS FRUITS

One of the very important weeks of instruction to be held during the farmers' short course at the university farm, Davis, is that of December 4 to 9 in the growing of deciduous fruits. The work will be as thorough and complete as the time will allow. The course will be conducted by specialists in the division of pomology. These instructors are men who have made many years study of their subject and are capable of giving their information either to beginners or to experienced orchardists in such a way that it can be easily understood and retained. The facilities and equipment for efficient work are of the best.

The principal deciduous fruits such as almonds, apples, apricots, cherries, peaches, pears and plums will receive special attention. Lectures and demonstrations will be given on the essential orchard practices. Students will "learn by doing." Much time will be devoted to the principles of pruning; the fruiting habits of trees and how they grow; the pruning of young trees; and the pruning of the bearing orchard.

The question of proper pollination for increased yields is less understood by growers than that of pruning, but it is of great importance to fruit growers who wish to top-graft unfruitful varieties or who expect to set out new orchards. The results of several years experimental work in pollination will be available for class study and discussions.

Special attention will be given to a study of the habits of the principal insects and plant diseases of deciduous fruit crops and the best methods of control. Demonstrations and practice work will be a part of the instruction in mixing and applying spray materials. Opportunity will be given to study the leading spray pumps and power sprayer outfits.

These subjects are so vital to a clear understanding of the essential practices for successful orcharding that growers of deciduous fruits can hardly afford to miss any one day of the entire week. As some of the work will be conducted in orchards of the Sacramento Valley, growers are urged to bring their cars for transportation.

Plans for drainage of thousands of acres of alkali land in the eastern part of Imperial Valley were discussed before the El Centro chamber of commerce by Prof. Weir of the state university.

# Wipe Out Every Rat and Gopher

## Amazing Discovery Quickly Kills Them All. Not a Poison

Rats, Mice, Gophers—in fact, all Rodents can now be wiped out easily and quickly. Imperial Virus will do it. The original, time-tested Danyz, fluid true Virus. Entirely harmless to humans, poultry, stock, pets, etc.

Infects Rodents only. Greedily eaten on bait. Sets up burning fever. The pests die outside, hunting air and water. Imperial Virus is put up in sealed bottles, guaranteed to retain full strength and potency. Only safe and sanitary method to overcome these pests. Indorsed by more than 60,000 users, including Farm Bureau Experts, numerous factories and large, nationally known institutions.

## You Can Get Yours Free

Send no money—just your name and address to Imperial Laboratories, Dept. 1100, Kansas City, Mo., and they will send you by return mail two regular full-sized $1.00 bottles of Imperial Virus (double strength). Pay the postman only $1.00 and a few cents postage when the package containing the two bottles arrives. Use one to rid your place of the pests, and sell the other to a neighbor, thus getting yours free. Special inducements to represent us.

NOTE—Readers risk no money in accepting the above offer, as Imperial Laboratories are fully responsible, and on your request will refund your $1.00 any time within 30 days, if you are not entirely satisfied with the results.

# Meeting of Livestock Marketing Association in Berkeley

The marketing committee of the California Farm Bureau Federation at the request of the California Farm Bureau Marketing Association, commonly known as the hog auction people, called a meeting of representatives of their organization, together with other people interested in the marketing of hogs, in the offices of the California Farm Bureau Federation.

At this meeting Roy Filcher, president of the California Farm Bureau Marketing Association, outlined the problem now confrontiing his organization in the San Joaquin Valley. When it started five years ago, there were a great many more hogs in the San Joaquin Valley than at the present time. At that time California was producing one-fifth of the pork consumed in the state, whereas at the present time we are only producing one-tenth of the consumption. As the San Joaquin Valley was the heaviest pork producing area it has fallen off more than any other section of the state. This has confronted the organization with two difficulties, one being that the sales are not frequent enough to keep the force working full time, the other that the sales are not large enough to encourage packers to attend. So the question of enlarging the scope of activities of this organization was the principal matter considered at the meeting held in Berkeley.

It was pointed out at this meeting that this organization had meant millions of dollars to the farmers of California. Before establishing the hog auction system, the California farmers always received at least 1 cent below the Chicago market, whereas since they have received from one and one-half to one-half cent above. In other words, formerly the farmers in California had been receiving a price for their pork based on the Chicago market minus what it would cost them to get their hogs to the eastern markets. Since this organization has been maintained, they have been getting a price based on the Chicago market plus the cost of freight into California, which has kept the California hogs up to a price equivalent to the next outside source of supply.

Since pork production has fallen off in California to such an extent the Los Angeles market has been getting most of its hogs from Arizona, Texas and Oklahoma, which has been a factor in California markets, as the freight on the hogs from these areas is not so great as it is from Idaho and other mid-western points.

After several hours of deliberation it was decided that the secretary of the Farm Bureau Federation should make a survey of the hog industry of California, after which another meeting would be held to consider plans for extending the system.

# Livestock News Notes

Caroline of Chilmark, one of the early high record Guernsey cows of the state, died recently in the Italian Vineyard Company herd. Caroline was noted as one of the foundation cows of the former Hollow Hill herd, and her record of 723 pounds fat in a year was made there. She was approaching her 15th birthday and dropped her ninth calf a few days before her death. She was the dam of three bulls, the best known of which is King of Hollow Hill who heads the Vineyard Company's herd, and six females, two of which have good A. R. records. Three of her daughters are in the Italian Vineyard herd, one of them being the grand champion Guernsey female of the Southern California and Los Angeles County fairs this year.

---

The class leadership for all ages of Jerseys but one is held by Oregon cows. This one is held by Hood Farm in Massachusetts for the cow starting test as senior three year old. The class leaders are: Senior yearling, St. Mawes Lad's Lady, 829 pounds fat; junior two, Pearly Exile St. Lambert, 816.1 pounds fat; senior two, St. Mawes Pretty Lady, 824.3 pounds fat; pounds fat; senior three, Lass 66 of Hood Farm, 910.6 pounds fat; junior four, Old Man's Darling 2d, 983.7 pounds fat; senior four, Vive La France, 1031.64 pounds fat; aged cow, Lad's Iota, 1048 pounds fat. All these records are for 365 days.

---

The Italian Vineyard Company recently sold two young Guernsey bulls to the association which is promoting pure bred bulls in Sonoma County.

---

John L. Smith of Spokane, who judged at Sacramento and at the Tulare and Los Angeles County fairs, won junior champion Holstein bull in the big show at Portland.

---

Sometimes when we have attended a pure bred sale and watched them go for meager prices and only after the hardest kind of work on the part of the auctioneers and all concerned we wonder whether people want cows or not. The other day we dropped in to the Rhoades and Rhoades sale yard at Hynes to see how a bunch of grades belonging to Roscoe Potter would sell. They were a top notch bunch of grade cows, all fresh or ready to calve, and almost before they were in the ring the price would be up to $200 and still mounting. We know now that people want cows. If these dairymen could be taught to realize that the thing which makes these cows big milkers is the pure blood of which they are carrying less than 100 per cent and that their sole value is in the milk they give, and that a purebred, besides giving milk, will reproduce animals equally as valuable as she is, then purebred sales would be easy. The system of financing purebred sales which is being applied in this state gives a chance to dairymen to acquire purebreds on the same basis as they buy grades, and more of them should take advantage of it. There has never been a sale of purebreds, even in the palmiest days, in which some very excellent animals were not knocked down at prices proportionately as cheap as grades were being sold, and dairymen should not overlook these opportunities to take home animals which literally grow into money instead of depreciating from year to year.

---

A kindly meant remark in these columns after the state fair, as to an oversight of the fair officials regarding tuberculin test certificates, was well taken, and Superintendent Payne has said that all cattle shown there hereafter will undoubtedly have to be accompanied by certificates showing them to be free from tuberculosis. In some states cattle from herds having more than a certain percentage of reactors, cannot be shown even though they themselves appear clean. These rules often keep good stock away but the men who do show feel a lot easier when their herds get home again.

---

The third annual meeting of the Horse Association of America will be held at the Drake Hotel at Chicago, December 6. There will be three sessions during the day. The evening one will be popular because it includes a banquet and eloquent speakers. The program includes discussion of The Relation Between Animal Motive Power and the Price of Grain; 40 Years With Horses in City Cartage; Equipping 19,000,000 Horses with Up-to-date Togs. Other questions discussed will include horse breeding in Europe, military use of horses, etc. The number who will attend from California is not definitely announced but it is known a good representation will be made.

WE USE THE
DE LAVAL
Cream Separator

**86% of the Exhibitors at the 1922 National Dairy Show**

held at Minneapolis, October 7-14, use De Laval Cream Separators. These exhibitors of purebred dairy cattle are the cream of the world's best dairymen—they know the best separator and use it.

Butter made from De Laval separated cream also won first place in *every class* at the annual convention of the National Creamery Buttermakers Association, held in connection with the Dairy Show. This makes the twenty-sixth time that De Laval-made butter has won first place since 1892. The world's best buttermakers use and recommend the De Laval.

In order to determine the oldest De Laval Separators still in service, we will give a prize of

**$25 to the Owner of the Oldest DE LAVAL in Each State**

Simply write to your nearest De Laval office, giving the date you purchased the machine, length of service, size, serial number, and a statement regarding the service you have received from it.

Prize winners in each state will be announced in due course.

**De Laval Pacific Company**
61 Beale Street San Francisco

**Sooner or later you will use a De Laval Cream Separator and Milker**

## POTATOES FOR HORSES AND CATTLE

Potatoes may be fed to livestock in limited quantities in connection with other feeds. While they may be sliced and fed raw with dry feeds, it is best to cook them before feeding, as heavy feeding of raw potatoes will cause scouring. Under ordinary farm conditions, boiling or steaming is the most economical method of cooking potatoes for livestock. Feeding investigations indicate that when potatoes are fed with other feeds to balance the protein requirements, from 350 to 450 pounds of cooked potatoes have a feeding value equal to about 100 pounds of corn, while from 500 to 600 pounds of raw potatoes are required to equal 100 pounds of corn.

Swine feeding experiments of the Oregon agricultural experiment station in 1913, showed that steaming the potatoes increased their feeding value about 60 per cent.

Vermont experiment station bulletin 152 shows that the average analysis of potatoes is 78.9 per cent water, 1 per cent ash, 2.1 per cent protein, 0.6 per cent fiber, 17.3 per cent nitrogen-free extract, and 0.1 per cent fat. The low protein content of potatoes makes it advisable to feed them in connection with feeds that are relatively high in protein content.

Unripe potatoes and sprouts of stored potatoes contain considerable solanin, a poisonous compound, and should not be fed.

Potatoes are palatable and well suited to horse feed. It is safe to feed as high as 15 pounds a day to work horses. They are equivalent to about one-third of their weight in hay. When potatoes are fed, a legume hay is a desirable supplement. If a grass hay, such as timothy, is fed, the ration should contain feeds, rich in protein, such as concentrates, legume hay, etc. It is advisable to chop the potatoes to lessen the danger of choking.

Cooked potatoes may be fed to cattle at the rate of from 25 to 30 pounds per day per 1000 pounds live weight. The allowance should be lessened somewhat if they are fed raw, on account of their tendency to produce scouring. A heavy allowance of potatoes, however, produces milk and butter of poor flavor.—Colorado Agricultural College.

## DON'T TRUST THE BULL

Farmers who keep bulls might learn from tiger trainers a valuable lesson that, if put into practice, would make them better life insurance risks. No man trusts a tiger until it is dead. A bull, although he uses an entirely different method, can do just as much damage as any animal in the zoo or in the jungle. He is more vicious and treacherous than most of them, and with such a reputation no man should trust him for a minute, no matter what his record for good behavior has been. "Mean" bulls perhaps have killed fewer men than those considered safe.

There are few rural neighborhoods without a list of tragedies and near tragedies resulting from putting trust in "perfectly gentle" animals. Only a few weeks ago an employe of the United States department of agriculture, visiting in New York state, was so badly injured by a dairy bull that he died a short time later. The owner led out the animal, always considered gentle, to have its picture taken. Without warning the animal knocked down his owner and then gored the department employe who had rushed to the man's assistance.

Had this bull been led on a staff attached to the ring in his nose the tragedy could not have happened. Better still, it might have been kept in a pen so arranged that handling would not have been necessary at all. Every farmer who owns a bull would do well to put up this warning in his barn: "Don't Trust the Bull."

## ARIZONA NEWS ITEMS

The Maricopa County Poultry Association held its monthly meeting at Tempe, Saturday, November 11. Several interesting talks were made on the feeding and raising of poultry. Before closing the chairman announced the annual poultry show would be held at Glendale the first week in December. This show is looked forward to with a great deal of interest. Last year an attendance of 4000 people made this a big event.

The dairymen and stock raisers in the Salt River Valley have determined by experimenting that Sacaton June corn is the best crop for silage in this section. This variety has been bred up here in the valley from the common June corn after several years work by experts. The best time to plant this crop for silage is in the latter part of June or the fore part of July.

Four men from the state university at Tucson are making a cotton survey of the Salt River Valley to determine yields and the best varieties adapted to this section. Fields will also be selected from which to save seed for planting next season. Of the 78,000 acres in cotton in the valley 4200 acres is planted to the short staple varieties and the balance in Pima. Right now the short staple upland varieties are very popular, due to the good price being paid, ranging from 25 to 28 cents per pound. No. 2 Pima, is selling for 32½ to 33 cents.

There will be much demand for purebred cotton seed for planting next spring. All those communities raising such seed this year should make arrangements to select carefully this fall to meet this demand. Good selected seed produces a better crop and insures a better price, thereby increasing the yield and more profit per acre.

At a recent meeting held in the Water Users Association building in Phoenix, agreement was reached between the farmers of the valley and the agricultural and horticultural commission of Arizona to cooperate in keeping out the pink boll worm and boll weevil. Rigid quarantine measures will be maintained in inspecting all shipments of seed into the state. These pests are doing several million dollars worth of damage to the cotton crop in the south annually.

By a contract just closed with the Maricopa Creamery Company the Arizona Dairy Association, a cooperative marketing association, agrees to deliver butter fat to the local creamery at a price based on the Los Angeles wholesale butter market, less one cent as quoted daily by the Los Angeles Produce Exchange. This arrangement will help stabilize the price of butter fat in this section and will mean much to the farmers of southern Arizona.

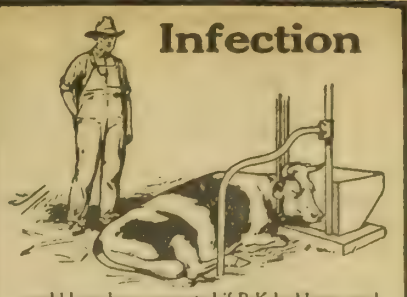
## TREATING SHEEP FOR STOMACH WORMS

"The Story of the Stomach Worm," is the title of a demonstration and exhibit by the United States department of agriculture at the International Livestock Exposition, Chicago, December 2 to 9. For several years the department has been testing methods for the prevention of injury and loss by this parasite, which is one of the most serious pests of farm sheep. Following a careful study of the life history of the stomach worm a practical and inexpensive treatment has been found that will prevent stomach worm injury.

In its exhibit experts of the department will demonstrate with a pen of wormy sheep the method of giving this treatment, known as the bluestone treatment. The simple apparatus necessary, and the proper solution to use, will also be shown to those interested.

Stomach worms are particularly destructive to young lambs, causing stunted growth and losses sufficient to wipe out all profit from sheep raising. By proper use of the bluestone treatment losses from stomach worms are prevented at small cost, and lambs thrive and reach market size at an early age. If the sheep man will acquaint himself with the principal points in the life history of this worm and apply the bluestone treatment at the proper time, most of the losses caused by the stomach worm will cease.

**Infection**



would have been prevented if B-K had been used shortly after this cow dropped that beautiful calf.

When cows do not clean properly after calving, it indicates a germ infection which is likely to run through the entire herd and result in Abortion and failure to "get with calf." The afterbirth should be removed at once, without force, and the cow flushed out with a powerful antiseptic.

B-K is scientifically correct for this work. It quickly dissolves the adhesions and slimy matter and brings the afterbirth, kills the germs and foul odors, stops the discharge and straining. B-K is non-poisonous, healing and soothing.

If your dealer does not have B-K send us his name. Get a gallon—the standard farm package.

FREE "trial offer" and bulletins on contagious abortion—calf scours—hog raising.

B-K—in one bottle—helps you keep all these diseases out of your herd—and prevents big cash losses.

## CALIFORNIA AT THE CHICAGO INTERNATIONAL

Prof. E. H. Hughes of the state university writes:

"In looking up the numbers of animals that have been sent to the Chicago International by California breeders I find that Bullard Brothers of Woodland have sent an excellent display of Rambouillet sheep that should do well at this, the biggest livestock show in this country. Straloch Farm of Davis sent three Poland China barrows that won at the California State Fair. They were big smooth barrows and in good condition. Gatewood and Stevens of Fresno sent the well known Poland China boar, Navy Boy, that was grand champion this year and last year whenever he was shown. In addition, J. D. Rowe and Sons of Davis and Thomas Harrison of Santa Rosa sent to Chicago their excellent herds of milking Shorthorns. The University of California sent seven head of fat cattle; 21 head of wethers and 10 barrows."

### Dog Eats Eggs

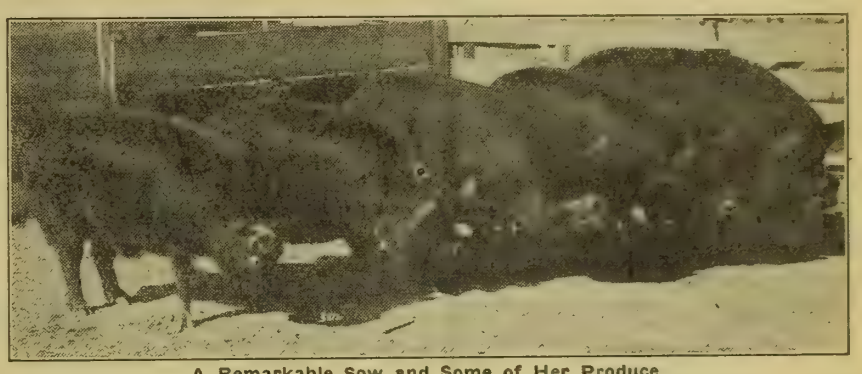
I wonder if you could give me a good remedy to break a pup from eating eggs. We have tried everything we know and have failed.—Subscriber, Calexico.

Dogs have been broken of eating eggs by taking a rotten egg and showing it to the dog and then putting it in his mouth and pressing his jaws together so the egg will be crushed. Another way that has worked well is to take a good egg and make a hole in the end and draw out part of the contents. Then put a quantity of red pepper in the egg and seal up the opening with some chewing gum. Be careful and do not get any of the pepper on the outside of the egg. Shake the egg so the pepper will be well mixed with the contents and place it in a hen's nest where the dog is in the habit of getting eggs. He will find it and try to eat it. One such egg will probably cure him as a dog has a good memory.

### Fresh Cow Sick

Cow came fresh, stopped eating, nearly went dry, won't eat enough What can be done to get her back on her feed and resume milk flow?—Subscriber, Ramona.

With no more information than is here given we can only suggest that a bitter tonic may help some. We would suggest giving her this which you can get of your druggist: One ounce of aloin, six ounces of turpentine and one quart of raw linseed oil. Mix and divide into four doses. Give one dose once a day as a drench. Follow up with these powders: powdered gentian, four ounces; nux vomica, two ounces; bicarbonate of soda, four ounces; corn meal, eight ounces. Mix and divide into 16 powders. Give one powder in the feed once a day.



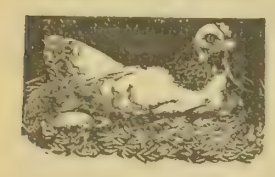
**A Remarkable Sow and Some of Her Produce**

The big sow on the right is Violet's Festline, a most remarkable Berkshire owned by the Italian Vineyard Company of Guasti. This sow has been shown 11 times, including the recent show at Portland, and has been grand champion every time, and nine times has been a member of the first prize aged herd. The four progeny have been heavy prize winners in their classes and at Portland were first prize produce of dam and first prize get of sire as well.

The Lincoln Fruit Growers Association has rented its packing house to the Stewart Fruit Company of Oroville. New equipment has been installed and the plant is now operating on new crop Navels.

# A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.



Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1217 Coca Cola Bldg., Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

# Final Report National Egg Laying Contest

By T. W. Noland, Director

TWELVE years ago the first egg laying contest was inaugurated at Mountain Grove, Missouri, sharing with Storrs, Connecticut, the honor of being the first in the United States.

Many changes have come to pass since that time. Egg production has gradually but steadily increased, Standard birds are more frequently found in the contest pens, and egg records show that there are high producers among all the more popular breeds. Plymouth Rocks, Rhode Island Reds, Wyandottes, Leghorns, and Rhode Island Whites have all won the honors of high pen and high hen during the 11 years of competition. The contest has always been conducted along practical lines. No methods of feeding, housing, or general management have been used that could not be practiced by farmers and poultry raisers.

In recent years the interest in this and other contests has been greatly increased by the desire for official record birds as breeders. We would like to call attention to the fact that cockerels from such birds are greatly in demand. This is partly shown by the inquiries we receive for cockerels from 200 egg hens and partly by the fact that over one-half the pens for the thirteenth contest are reserved one year before that competition is to open (November 1, 1923).

### The Contest

Pen No. 11, S. C. White Leghorns, owned by D. Tancred, Tancred Poultry Farms, Kent, Washington, won the large cup and $50 for the high pen over all breeds, with record of 1297 eggs for the year, or an average of 259.4 eggs per hen.

Hen 3, Pen 23, Barred Rock owned by G. Caball, Hudsonville, Michigan, won prize of $5 for high hen over all breeds by laying 293 eggs during the year.

The 300 hens in the contest laid 58,100 eggs during the 12 months, making an average of 193.6 eggs per hen; 134 hens making records of from 200 to 293 eggs during the year.
